The best/quickest way I've found of it is the highlight/delete way. To
get rid of a small block you can highlight and delete it. The same goes
for several pages. Place the cursor where you want to start and use the
window slider to get to the end of the bit you don't want and shift-click
to mark the end of the block, then hit another key, eg. delete.

I would have said check under *.TXT (Options/Local) to see if back-ups are
enabled, but since you mentioned projects, you've either used save-setup
(also under Options) with at least one window open, or the auto-save is
enabled for projects. Try closing all the windows in QED and clicking
save-setup. If that doesn't remove it, us Options/Autosave to disable
it, then save-setup again, with all QEDs windows closed again. I had the
problem, not long after installing it, where it opened several files on
start-up and doing the above stopped QED loading them.

You can have colours (of your own choice) in message windows as well.
Look under `texteffect' in o.inf, and experiment with different colour
indexes.

QED is the bomb. You just need to learn it better.

Yes, Control-Y will delete the line. UNDO will undelete it. ^Y is
pretty much a standard command across various programs.

>This leads to the next complaint. YES, I know you can just HIGHLIGHT the

It's even easier with QED. There are two easy ways that come to mind:

1. Place the cursor at either the beginning or end of the block you
want deleted. Then go to the other end and click on it while holding
down the shift key. It will highlight everything between your two
points.

2. Press Control-B to start your block. Then move in any direction
with the arrows or shift-arrows or control-arrows or whatever. Your
highlighted block will follow you. I do this all the time to delete
a couple pages. I press Control-B, and shift-down arrow a couple
times to get me on the right page and then use the arrow key to get
me exactly where I want.

You must have saved your setup with that file loaded. Just get rid
of it by pressing Control-U and then re-save your setup with Alt-W.

Yo Dudes,

Paul, just use QED. It's a learning experience. I'm posting this message using
my G3. I'm having all kinds of problems posting messages using Netscape
v4.5 and one of my ISP's. I'm SO CLUELESS you wouldn't believe it. I have
2 ISP's and
trying to switch back and forth causes all kinds of problems. I have no
idea how this message will look or what's up. When I use Netscape, the
original message isn't even shown.This message is being posted using
NewsWatcher. I never even read the doc's <g>. QED does the job a lot
easier for editing...

CU,

Charles

able,
>possibly used?

You don't need any accelerators at all to get decent performance using the Internet with a MSTe. Apart from browsing graphically it is actually al-
most as usable as my P133 PC and much more fun.

I see you are using an Amiga right now and perhaps you have a PC as well? The MSTe has several serial ports and can act as a gateway to the Internet using Sting. When connecting to another Atari you can even use the MIDI ports. I have had quite fun playing with this lately except I found my MSTe has a hardware flaw leading to lost packets on Serial2 at higher speeds.

I use (and recommend) this set-up for Internet use:

Geneva 6: cooperative multitasking kernel
Neodesk 4: desktop manager
NVDI4: Accelerates screen redraws and provides with true type chr sets
HSMODA7: serial port drivers
Sting 1.15: Network and dial up tool
Popwatch 2.61: Sends and receives mail
Newswatch 2.01: Sends and receives news
Okami 1.34: Off-line reader for mail and news
CAB 2.5: WWW browser

It will take a few days to set up all these programs properly even if you are an experienced Atari user.

I can't be sure about what QED does (as I use Everest) but the usual
keyboard code for 'delete line' is CNTRL+Y.

>pointer type msqld.c 501: Warning: passing arg 3 `getsockname' from
>incompatible pointer type

A quick 'grep' found no headers for calls to any of the three above
functions. Thus, I assume they are "system" calls, possibly part of
sys/socket.h ?

If you post the lines where each of the above functions are declared
then maybe folks can help more. Be careful about the preprocessor
though. The header could have multiple declarations for use under
different systems. To be totally sure you've got the one currently
being used, locate the option which makes the compiler write the
preprocessor output to a file, then pick the declarations for accept()
etc out of that file, and post those.

>Once the installation had finished I was able to start the mSQL daemon and

>out where it is going wrong. It seems that the monitor manages to connect
>to the daemon but then thinks that the connection has finished and so exits.

I suspect you'll find something along these lines for accept() etc ...

int accept(int,struct sockaddr*,bob*);

You have to find out what accept() really wants. Let's say it really
wants a 32 bit pointer to a 32 bit integer for (bob). You may well
find the msqld.c source code compilation options are set so that it
passes a 32 bit pointer to a 16 bit integer, for example.

On the other hand, you could find the definition for (bob) actually
boils down to (int) - ie

```
(sizeof(bob) == sizeof(int))
&&
(sizeof(bob*) == sizeof(int*))
```

and that the code generated by msqld.c does match its requirements.
Simply that the compiler is being very verbose - I have never used it,
so I wouldn't know. In this case, the bug would be elsewhere.

I have been using the ZIPP drive on both my Mega STe at home and to carry information to my 6x86 at work. I did have to format the ZIPP disk on the Atari to TOS & DOS Once this was done the IBM at work had no problems reading or writting to the ZIPP disk. The only thing that I really hate about using the zipp on the Atari and the IBM is all the *$%ing hidden files that Windows 95 seems to always want to write all over the disk. Oh well this is life on the IBM I guess. Also I use the 8+3 file names instead of the long filenames.

The idiot means DISK IMAGES. These *.ST files are disk images, to be
used with emulators... The current trend among the emulator lamers is to
use the word "ROM" for everything that you load into an emulator, no
matter if it's a disk image, a cassete or a real ROM.

It can't be Zetnet, they only offer 33Kb connections.

I'm still there, but yes I now use a different ISP, cos of all the reasons
above.

3896. Milan news

Newsgroup: comp.sys.atari.st
Date: 1998-08-01 00:00:00 UTC
From: tos4ever@ping.be
Message-ID: <35c37b484e16c30@ping.be>
Source record: 95967

He everyone,

I thought this might be of interest for quite a few people.
I found this text in maus.sys.atari.hardware today.
As I know the most of us can't understand German I passed the text through
Gemtrade. The translation isn't that good but it's probably good enough to
get a picture of the Milan. I tried to correct the translation but there
are just too many faults.
If someone needs the original text send a mail to me and I will post it.

BTW: sorry for the long posting.

Mails Please only on: Info@milan-computer.de

The Milan is there!

if the summer already on (self) wait leaves, then becomes it's about
time that it from the Milan good messages is:

the delivery the Milan-systems has began (28.07.1998)!
Following is it to the current available machine to say:

the demomilan for the retailers are like this equipped:

- Milan-Design-Tower
- 16-/32-MB RAM
- IDE-hard drive
- PS/2 mouse
- keyboard
- 2 MB-graphics card
- Milan-Multi OS 1.2
- Software-package

At the latest on the first August-week the Milan will be
at the Active Milan-retailers (see http://www.milan-computer.de)

After some difficulties with the Hardware-production and the
operating system-configuration a perfect System can be introduced, the full and whole the
Anspruechen the ATARI-User agree allowed.
The Hardware becomes complete in germany producesed and requirement
self no manual repairing.

The TOS-operating system has been reworked complety after the acquisition
of the TOS-right and it's now adapted for the new/modernere Hardware
standard.
Self a new appearance and some new functions could the ATARI-OS now
verpasst becomes. Future function enlargement are self in

work. Between can free of cost by the Fachhaendler or over the
internal referring to becomes.

In its current state orders the Milan over following Gembench-values:
measured with a 25MHz-Milan the Vorserie (some values the series
are meanwhile optimisesed became):

a) Milan, resolution 800 x 600 with 256 colours, FPU
measured opposite Falcon 030, nO NVDI

b) TT with Fastram, TT-medium-graphics

c) Atari ST, 640 x 400 mono, without Blitter

d) PAK/3 with 40MHz, without nearly-Ram, NVDI, mono

to c/d: there the Messkandidaten here in the monochrome mode measured becomes, are
no reell comparable values in the Display-area possible, there in the Mono-mode
8 time fewer data dealt with becomes have to (as in the chosen Milan-mode)

a) b) c) d)

Average: 1164% 820% 1755% 166%

at present work the developer of the Milan on a optimisation of the
RAM-through the. From here haengt the whole of the computer strong from.
With first Testwerten can this through the so far as improves becomes, that
the whole in order to over 30% improved becomes can. In connection
with a Hoehertaktung of the Systems (e.B. 33 MHz) duerfe So a
speed increase from further round 50% in foreseeable time
realisierbar be or Its. In the practice lies the speed of the Milan with round
5facher TT- and 10.5facher Falcon-Speed (measurement from Packzeiten with
ST-Zip, Lharc 3.12, Print with Calamus SL 98 ...).

But also on the optimisation the graphics cards becomes taeglich worked.
This driver so designsed became, that it always the maximum-values of the
associated monitor caculation and to the provision places.
The resolution can again either by the start (press the on the left
Shift-key) or direct(ly) from the desktop from modifiesed becomes. Some examples,
what possibilities the Milan-graphics cards for the at present
supported S3-graphics cards supports (associated became a 82
MHz-Monitor):

colours X-/y-axis picture refresh frequency:

True-Color 800 x 600 >=100 Hz
High-Color 1024 x 768 96 Hz
High-Color 1152 x 864 80 Hz
256 1280 x 1024 73 Hz
mono 1152 x 864 80 Hz

with all resolutions, the smaller as 1024 x 768 are, can frequencies
clear(ly) over 100 Hz reaches/ed becomes.
The inset from NVDI is trouble free possible and can with some values how
e.B. The text output again positive consequences on the
output speed have.

Kompatibilitaet:

At present power the Milan a soliden impression, because self programs, the on
the TT or Falcon problems in view of your efficiency of function did,
verrichten on the Milan trouble free your service. This lies u.a. On following
aspects:

- through the complete ï¿½berarbeitung of the TOS could a row from Bugs
removesed becomes, the (self) in the running the years in the operating system
crept in(?) had.
- There the Milan over a Hardwareemulation orders, must it not imperative
the from the software benoetigte Hardware of a old ATARI possess, with it the
software your service carries out. The meanwhile in the Milan-System put
Hardware-Emulation is from there in the position, self Hardwarezugriffe to intercept
and to emulate, with to them a Falcon or a TT your difficulties have.

The software:

the software round in order to the Milan is - so think we - very valuable. The
Milan-Multi-OS, based on on the last Revision of the N.AES, Pass
in the meantime from following programs:

- N.AES 1.2, Milan-Version with modified appearance
- MultiStrip, versatile Task-Manager
- TWSM/2, more convenient Workspace-Manager
- Thing 1.27, Desktop with the support the rights mouse key, the
context sensitive menus calls.

3897. FTP problems (still)

Newsgroup: comp.sys.atari.st
Date: 1998-08-01 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <6pvr1mfle1@excalibur.flash.net>
Source record: 95968

Hello all!

I haven't asked about this in a while, but this problem still exsists
and is quite annoying. Using STing and any FTP program (Newsie, AFTP, MGFTP,
etc.) I can access just about any FTP site normally except my own. This
makes it frustrating when I try to update my web pages. Here's what happens
with Newsie (the one I've had most success with and use most anyway):

1. It connects fine and seems to load the directory ok.
2. When the directory is displayed, there are no filenames and the
file sizes are all 0.
3. I can't download anything.
4. I can upload things, but when it tries to re-load the directory it
freezes and I can only press esc.

I've talked to my ISP, and they can access the site just fine, and through
my wife's university shell account, I can access it fine, too. Has anyone
else had this problem? Does anyone have any suggestions (settings to try and
change, people to ask, etc.)? Below is the Newsie LOG file from the last
time I tried to change my pages. There's some info at the beginning and end
from accessign Newsgroups. Sorry! :) I didn't want to accidentally clip out
some potentially important info. Thanks!

3898. Hard disk driver

Newsgroup: comp.sys.atari.st
Date: 1998-08-01 00:00:00 UTC
From: steven bird <bird@eagnet.com>
Message-ID: <01bdbd89$5af33760$6dce4cc7@bird>
Source record: 95969

I am looking for a program that will install my Atari hard disk.
I have previously used the program AHDI; Atari Hard Disk Installer.
I will settle with any hard disk driver that will work with my Atari 520st.

If you want to stay with PD s/w you can:

Stay with AHDI
Try the Supra stuff
Try the CBHD stuff

I use CBHD - it is modern and quick.

3900. Start Me Up!

Newsgroup: comp.sys.atari.st
Date: 1998-08-01 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6pvtno$3sc@enews4.newsguy.com>
Source record: 95971

Well, I got the Start Me Up configuration utility. but it seems the "key" that came in the archive doesn't work with this version of SMU Setup, and without it, you can't SAVE anything, so I figured why bother using it in the first place. And looking through the (huge) DOC file of Setup, I decided to try editing Start Me Up's SET file in QED. It's not too hard using the drag and drop (file path) into the .SET file using QED. It just took some time playing around with the formatting (making sure there are TABs everywhere!) and much trial and error, but I have Start Me Up working now with several menu entries and sub-menu entries. It will take a while to get everything in there that I need, but now that I've got the basic format down, it's not _too_ painful.

So I guess I didn't _really_ need that Setup program after all...

Very true. Too many new programs at once is my problem! I've had the Falcon (and STe) for a long time, but I've been using so many new programs lately (new to MagiC, QED, Start Me Up (still working on that one - grumble grumble...), Everest, and to a lesser degree, NEWSie, POPwatch, and a few others as well) that it's all a bit much to take in at once! Whew! ;^o

>Yes, Control-Y will delete the line. UNDO will undelete it. ^Y is

VERY nice. I knew there had to be some other stuff I was overlooking. Thanks a million! Looks like QED is now my editor of choice.

Hi Michael,

My experience, from the start (Newsie 0.80 I believe) till now:

1. The same
2. Directory is displayed OK, filesizes indicated are all 1 byte more than
is indicated on my system.
3. No problem at all
4. Exactly the same. After file nr. 1 the dir isn't retrieved and it freezes
here too. Just on one (1) occasion it displayed the dir after a second or
so and I could do another upload.

I recall having asked about this before, but I never got a decent answer. So
you're not alone, except for that my downloads go 100%.

3905. HELP! Need to print an Atari ST text file on a PC

Newsgroup: comp.sys.atari.st
Date: 1998-08-01 00:00:00 UTC
From: duffy@aros.net
Message-ID: <6pvjod$in7$1@news.aros.net>
Source record: 95976

My brother has an Atari ST word processing document he would like me to print on my PC printer. Unfortunately, I know nothing about Atari's and need some help.

His floppy is not recognized by DOS. Is there a way to solve this problem?

Once the floppy is recognized, is the document readable by a DOS/Windows based text editor or word processor? This document was written in 1988. He thinks the word processor is called "1st Word". I have MS Word for Windows, Write, Word Pad and Notebook; will any of these read the Atari file? Is there a file converter program available? He still has the Atari...if he boot the machine, loads the word processor and opens the document can it be saved in ASCII?

If you can help please email duffy@aros.net. Thanks!

3907. SCSI and bus arbitration

Newsgroup: comp.sys.atari.st
Date: 1998-08-02 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <PGA1CJL@tos.pl.net>
Source record: 95978
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

We've just purchased a Quantum Fireball 2.16 GB SCSI hard disc drive for use on a Atari Mega STE, but there seems to be a problem. Firstly the Mega STE SCSI interface doesn't support Parity, but even if we avoid that problem, the drive still doesn't work. I understand that this is caused by SCSI bus arbitration which is used by the drive but not supported by the SCSI interface in the Mega STE.

The shop will exchange the drive for another Quantum model, so can you suggest a Quantum drive of similar size which is suitable for use in the Mega STE.

Also I would be interested in a more detailed explanation of what the bus arbitration is about (also I've heard of initiator identification). Just what is that about, and how does it relate to the Mega STE's SCSI interface?

Any assistance would be appreciated.

Turn word-processor mode off in 1st Word to export as ASCII.

If formatting is important, there's a 1st Word to RTF converter available
for TOS and DOS called WPLS2RTF v2.01. The archive, with both TOS and DOS
executables, is available at:

ftp://ftp.funet.fi/pub/atari/util/wpls2rtf.zip

I can't speak for the DOS executable but the TOS version works well.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

As far as I know, bus arbitration is to allow the hard drive (or other SCSI device) to be accessed by more than one controller. For example, two computers sharing one HD, each computer has a different controller address and the HD only allows one access at a time.

So, you could have a PC and an Atari sharing a hard drive, each with different partitions, including shared partitions. (I know with Apdaptec controllers you can change the SCSI address to be something other than 7.)

This is my understanding.

Parity on the drive *should* be selectable by a jumper. One thought is, the drive my be waiting for a start command?

Carl.

>Interactive's FTP site, but I don't know if it's the latest or not.

It isn't, go to Thomas Much's home page and follow the Natural Born
Programmers link.

Although the docs are in German you should be able to see what has been
added without too much trouble.

The ST-Guide hypertext links from the StartMeUp Setup guide to the StartMeUp guide
are hard-coded to the positions of the relevant entries in the SMU hypertext
so you might not find that the right help is presented, however it's not a
major problem.

I think there are convertors (for the ST) but can't remember where to
get them from.

Your best bet is to re-save the data under 1st Word as ASCII (yes, it
will do it) and jst reaad it back into the PC WP. You will lose the
text-effects, of course, but 1st Word did not offer many of these so
don't fret!

I am using the T_SETCLK.APP program to set my system clock each time I connect to the Internet. I have a script for the STiNG DIALER.APP which runs T_SETCLK.APP. This program does what I want, but it brings up a dialog box asking if I want a TCP or UDP connection to get the time. I really don't care how it connects, I just wish it would do it without any user input! Are there any other options which will let me do this automatically.

Atari Portfolio LOT!
PC Card Drive interface (uses ISA slot) in box with extra Drive
3 BRAND NEW 64k memory cards in sealed Atari Box (Sell retail-50.00US
EACH)
1 USED 64K Memory Card in Atari Box (ACOM on card)
Serial interface in box with German Instructions
Genuine power supply in box

Also Included:
One Portfolio, Broken, LCD isnt working right, it works when you open
the screen slightly however turns off when you open the screen fully.
One Portfolio, LCD removed, machine should work o.k.
I would assume both Portfolio's are easily fixable, especially the
one with the screen still on, it is probably just a *small* problem
which
someone with electronic experience could fix, I however do not have this

experience, I havent even opened it up.
If you purchased all of accessories from a supplier you would be looking

to pay over 250.00 not to mention the probably easily fixable machines.

I take it you want more than "P - QB4" in ASCII. What sort of
database do you want?

If you want to access the prefered moves from a particular board
position, tree structure of board positions. You could do this with
hypertext, but it would be painful.

BTW, I do custom software, cheap.

Check out the documentation on KILLFILEs. There is the ability to
Transfer incoming email by a variety of methods, including Author and
Reply-to headers.

Yes POPWatch does handle selective mail retrieval, which NEWSie does
not, although its been requested many times, and has been
'on-the-list' for over a year now...

>use on a Atari Mega STE, but there seems to be a problem. Firstly the Mega
>STE SCSI interface doesn't support Parity, but even if we avoid that
>problem, the drive still doesn't work. I understand that this is caused by
>SCSI bus arbitration which is used by the drive but not supported by the
>SCSI interface in the Mega STE.

I don't believe you can connect a drive with bus arbitration to the Mega,
since you can't give the controller a SCSI-address, like you can on the
Falcon and TT. I seem to remember seeing somewhere that the Link-97 would
support those drives too, but I'm not quite sure about that.

>The shop will exchange the drive for another Quantum model, so can you
>suggest a Quantum drive of similar size which is suitable for use in the
>Mega STE.

I believe that the Atlas works, though I'm not sure about that either since
I haven't tested it. Since the Atlas works perfectly in every aspect with
CAF on the Falcon, while the Fireball and Empire (which both use
arbitration) don't, I suspect that the Atlas works with a normal
Link-interface with the Mega too...

Uwe Seimet (us@ooc.de) wrote:

: What about HDDRIVER/HDDRUTIL 7.5? Simply try the current demo version
: of HDDRIVER 7.5 in order to check if you get a different result:

That's the trouble with HDDRIVER, no sooner have you purchased it, when a newer version appears, and if one upgraded always to the latest version it would become rather expensive.

: http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html

Thanks. We came to the conclusion that the drive was probably defective.

HARDWARE:

14meg Falcon, no internal HD, but external 130meg external scsi drive
included for booting.
$430----SOLD

Two Atari Falcon 030 computers, each w/14megs of ram, 80meg HD, and all
necessary audio mods. One is in a Wizztromics rack (3 sp.)with a zillion
ports and PC-compatible external keyboard and is further housed in a
4-space Calzone flight rack, while the other is a standard Falcon
(all-in-one unit). Standard Falcon also has 286 emulator card.

Standard 030: $460

Rackmounted 030: $700----SOLD

1040STf (1meg) w/BW, color monitors, external disk drive: $100

Wizztronics cartridge port extender (18"): $35----SOLD

Wizztronics Cartmaster 4-in-1 cartridge port expander: $75
----
trackball: $10

Alpha trackball (lights up when used!)(John Perez-I finally found it):
$25----SOLD

SVGA Color monitor (14"): $100

SVGA Color monitor (14"): $100

SVGA Color monitor (14"): $100

All monitors come with appropriate adaptors for the Falcon

External 1 gig scsi hard drive: $150

External 1 gig scsi hard drive: $150

External 2.1 gig scsi hard drive (A/V rated): $225

Iomega scsi zip drive: $75

Iomega scsi zip drive: $75

Iomega scsi zip drive: $75

CDRom (2x) and Syquest 44 drive with one cart housed in external case:
$150

CDRom (4x): $75

CDRom (4x): $75

14.4 fax/modem: $30

Motorola Premier 33.6 fax/modem: $65

Screenblaster II resolution enhancer: $50----SOLD

MUSIC HARDWARE:

Soundpool ADAT interface (used once): $375

Steinberg MIDI expander 1 midi in, 3 midi outs: $75----SOLD

SMP 11 2in/4out MIDI interface w/SMPTE: $275----SOLD

FA8 Adds 8 analog outs to the Falcon: $225

FA8 Adds 8 analog outs to the Falcon: $225

Cubase Audio Clock Allows Falcon to use 32khz, 44.1kh, 48khz audio files
and hear/edit them at proper tempo/pitch: $40

Falcon Digital Interface Adds digital ins/outs to the Falcon:
$225----SOLD

Falcon Digital Interface Adds digital ins/outs to the Falcon:
$225----SOLD

Micro MidiMacman Adds another midi out to the Falcon via the LAN
port: $25----SOLD

Falcon Migraph Colorburst hand scanner/software: $75

All cables/mice/etc. necssary to connect each of these items is available
---
MUSIC SOFTWARE:

Cubase Audio Falcon 2.06 16 tracks of simultaneous audio----SOLD

Cubase Audio Falcon 2.06 16 tracks of simultaneous audio: $200

Both copies of Cubase come with additional modules

Emagic Logic Audio Falcon 2.01 w/LOG 3 interface (adds 3 additional

Well - It's getting close to the release date for ST+ Fanzine #31.

Al & the Computer Dungeon appear to be temporarily unavailable but
don't forget that there are two U.S. distributors.

This month, whoever orders a copy from me will receive an oversized
Atari-related postcard from Priceless! (Don't live in the US? I
haven't forgotten you - all distributors should receive a supply in
time to be included in issue #32).

The price is $2.00 US, and you'll receive:

a) Thirty-six printed pages. Packed with reviews, tutorials, tips
and news. A true not-for-profit extravaganza - recently
featured on "Late Night with David Letterman" --um... wait...
that was Leonardo Dicaprio....
b) A free postcard. (Whoopie Doo, huh? But heck... it is _free_)
c) A credit that you can apply to the next issue you purchase
through me. (Change Back! Wow!)

Send your check or money order for $2.00 (payable to Terry Ross) to:
Terry Ross
101 First Street #3
Bangor, ME 04401

GEMDOS may be happy until 2024, or whatever, but the keyboard clock doesn't
go beyond 1999! Bit of a pain for my clock prog, as it uses that clock to
keep the time through resets. Talk about inbuilt redundancy :-(

I've tried the newer Freedom 2.0x but it seems big and clumsy and I don't use long filenames. Boxkite didn't seem like an option either. I've got a stock 4Mb Falcon so I really don't care much for Win95-a-like OS addons, but the old Freedom 1.15 seems to be good but hard to find, perhaps you can send me the shareware archive? I really like selectric but can't use it under MagiC, and I think I also have got problems with other software and Selectric.

>with them. Eheu...!

OK. In an attempt to bring Okami to the masses of Atari users, here's my input!

There are two versions of Okami. One is by some German guy Wolf... something, and is of no use to anyone outside of mausnet AFAIK.
The other is based on his work, but improved to offer support for various incoming/outgoing formats, the most important one for me being NOS.
The NOS compatible version is 1.29 and above and is written by Jos Den Becker.

http://www.xs4all.nl/~josdb/okami.html

NOS format is the same as the standard Unix format of Berkeley Unix Mailbox format for email, and rnews format for news.

Okami can be used with STiK or STinG by using POPwatch and NEWSwatch as the online programs.

Okami has limited colour capability. Quotes etc. can be shown in a different colour. I'm not aware of *any* other email/usenet program on the Atari that offers anything more than that, so why complain???
It is certainly *not* MONO only, and IMHO has as much colour capability as Oasis1/2, NEWSie, Infitra, etc. etc.
Maybe it's not got as fancy a GUI front end as Mymail or Infitra, but then again IMHO that's a *good* thing. The fancier the GUI etc. the less space for viewing your text etc!!

Jos' version comes with English docs, and although maybe confusing at first, it's really not that difficult to set up. It's probably more flexible than every other offline client, thus with flexibility comes complications.
It's worth it!

Jos is actively fixing bugs and adding new features to his version of Okami all the time.

Basically, if you want a bloody good email and usenet system on the Atari
(without resorting to MiNT and MiNTnet) then go for Okami, definately!!

Gary

For STiK or STinG, under TOS, MagiC, Geneva etc. etc.
Just not MiNT or MiNTnet. Oh, actually you can always use GlueSTiK. Wonder why GlueSTiK was ever invented if MiNTnet clients were so fab in the first place. Still never mind ;-)

Well, you were the one wishing for NEWSie to do something, that Okami
already does, weren't you. Anyway, it's hardly that big a deal. Probably
setting up STiK or STinG was the hard part. Clients etc. are hardly that
difficult.

Gary

3946. Want to trade PC stuff for Atari

Newsgroup: comp.sys.atari.st
Date: 1998-08-03 00:00:00 UTC
From: mikhol74@aol.com
Message-ID: <1998080301513300.VAA18037@ladder03.news.aol.com>
Source record: 96010

I have the following items that I wish to trade for an Atari Falcon030, TT030
or possibly a Mega STe.

386sx/40 computer with 4mb RAM and a 630mb HD
Card: com and lpt port
PS-2 Keyboard
3.5" Floppy drive
5.25" Floppy dribe
72-pin SIMMS (4 total SIMMS, each between 1 and 4 mb)
486dx/33 CPU on a daughter card
SVGA video cards (2 total)
2400 baud modem (internal, unknown brand)
14.4K baud modem (internal, US Robotics)
386 motherboard
PS-2 mouse
unknown cards, I believe they are VGA (3 total, 2 ports on each card)

If this interests you, please e-mail or respond here. The Atari must be in
good condition (all keys working, etc.) and I would love it if the manuals were
still readable. Thanks.

From: lmcclure@ibm.net
Message-ID: <MPG.102efdcf2a0f38b6989688@news1.ibm.net>
Source record: 96011

In article <6pgvh0$3fv$1@ns1.sols.net>, Phantom (phantomm@eastky.net)
stated:

> Does anyone know of a modification that will allow
> one to get a composite output from a Atari Falcon?

If you have the manual that originally shipped with the Falcon, the video port pinout is located on page E-4.

If not, composite is located on pin #12 of the DB-19 video connector. Ground is available on pins #10 and #11.

```
10 o o o o o o o o o 1
11 o o o o o o o o o 19
```

DB-19 connectors were also used for Apple IIc/IIgs/Mac disk drive connections, so they should not be as difficult to come by as the DIN-13's used for video on ST's.

You may want to consider adding an RCA jack to the back of your Falcon, and tapping these signals from inside the machine, however, as this would still leave the monitor port free.

If you want to avoid soldering altogether, you will need to find one of the (apparently) somewhat rare "monitor blocks" that Atari made available that had the DB-19 on one side, and an RCA jack for composite output on the other.

The one with the best record would currently be CAB 2.x, but there are
others.

Have a look in the Quick FAQ.

Hello out there, I'm looking to get my hands on SMPTE Track platinum which I believe is the upgrade from gold. Also, if anybody knows about the history of this product and what became of the company any info would be greatly appreciated. I purchased SMPTE Track gold in 1991 and am still using it off and on. Info on compatabilty with Mega 4 STE also needed.

THANKS

> Federated Stores).

Yes, it was Federated, but that was the 520STfm, not the 1040. Both machines shared the same case, and unless you notice the badge, or the 1040's lack of an RF modulator, they appear identical.

: We want to see all the goodies just like our P.C./Mac friends, and build
: our own web page.

: Thankyou from the Melbourne Atari Comp Enthusists.

CAB version 2.x is the most well-known WWW browser. I also use Lynx which
is a free text-based WWW browser.

For making a WWW page, all you need is a simple text editor. I use QED.

Nurmix (ecncomr@socal.com) wrote:
: One thing STeno does (that seems like an obvious feature really) is quickly
: and easily delete a line with SHIFT + DELETE. You put the cursor at the
: beginning of a line, and hit those keys - BOOM, the line is gone. Very
: handy, and I'd grown accustomed to that. Now with QED, there doesn't seem to
: be an equivalent way to do that. All combinations of SHIFT / CONTROL /
: DELETE / BACKSPACE do nothing like that. One character at a time, or one
: word at a time with SHIFT seems to be the best QED can do Am I missing
: something here?

Why not use Control-Y?

: This leads to the next complaint. YES, I know you can just HIGHLIGHT the
: text and hit DELETE. STeno does this too. But if you have a page or two of
: text, you have to slowly scroll through it a line at a time with QED. With
: STeno, you could hold down SHIFT while scrolling to highlight a PAGE at a
: time - very efficient and useful. Is there a way to do this with QED?

Simply press Control-B to begin the block, then move through the file with
all the normal keys, such as shift+arrows to move one page at a time.

Try reading the manual.

It's certainly there in Offline mode, where it can't find the file in
folder OFFLINE. I don't read online (except for the items which 'hang'),
but any items which have been deleted from the server seem to work
properly during 'read for offline'- they don't reappear in the index.

A mate uses an Atari STFM with trackman software for MIDI sequencing. I have an old IBM 8086 PS2 with a monochrome monitor and I wondered if the monitor might work with the Atari (he's currently using a TV for a monitor). I haven't seen the Atari, so I don't know what kind of ports it has, can someone give me some info? And do I need drivers?

Also if anyone has a suggestion for a use for the PC (eg can it be connected via serial cables and used for extra hard disk space or something?) that would be welcome.

One more question - if I download shareware from the internet can the Atari read my PC disks, and if not, how can I get them from my PC to the Atari?

Thanks in advance

Offline for me.

BTW, the KILLFILE feature is excellent in v.90 WRT to incoming mails being auto-routed. But I haven't been able to get the acknowledgement feature to work for me. The ACK.TXT is in the work directory and in my mail folder, and needed text included in KILLFILE.TXT, but nothing is happening - any ideas?

Kind regards

Mike Kerslake

3960. Diamond Back 3 problems

Newsgroup: comp.sys.atari.st
Date: 1998-08-03 00:00:00 UTC
From: jfhaslam@zetnet.co.uk
Message-ID: <6q4mai$fe6$1@irk.zetnet.co.uk>
Source record: 96024

Hi All!

I wonder if anyone out there can help?

I recenlly had all my hard drive partitions wiped! Luckily (or so I thought) I had a recent full backup on Zip Disk created by Diamond Back version 3.60.

However, when I try to restore it, it doesn't work. The backup is in three folders on the Zip Disk: C_BACKUP, D_BACKUP, E_BACKUP and F_BACKUP. Following the manual I rebuild the log file (as the original logs were lost as well) for each and select the original source and destinations, this seems to go all right until I actually try to restore. It seems not to have selected any files (it doesn't actually access the Zip Drive at all) and as soon as I start the restore it says "GEM File Backup complete" even though nothing has transferred.

This is causing great grief, as some of the data backed up includes my CV (or Resume for the Americans out there!). The only paper one I have is 10 years old!! :-((((

Please reply either in here or by email!

Cheers!

James

Unlike backing up to tape, DB3 cant tell whether the files are compressed or
not! On Zip disks, the file names are the same as those on the original
disk, so if you compressed them during backup, you must tell the restore
function exactly how they were stored. DB3 can then decompres them!
Otherwise, it cannot tell the format from the file itself.

All housed in the "under the monitor" style case from Toad Computer that was used for the Syquest removable drives they sold, lighted power button on front, all in great cosmetic shape. Housed inside is a Digital 400MB SCSI HDD in one bay and a 2nd bay is available for any other drive including removeables. Works right away on the newer Ataris and if you have an older one, then you will need one of those LINK adapters.

$199 plus freight. Add $50 if you want a Syquest 44MB removable drive in the 2nd bay. Also have a couple 44MB cartridges available for sale. Makes for a great HDD system for Ataris and any other SCSI based system like Macintosh.

Oops! Yes you are correct, but I have selected the compression option
when I rebuild the logs, but it still doesn't select any files after
the logfile is rebuilt.

>if you have any informations contact me.

There are two possibilities here:

1. A program called Ghostlink which enables an Atari to connect
via the parallel ports and access the PC's hard drives and CD
Rom.

2. Run StiNG which is a TCP/IP stack, which besides being able to
access the Internet can also connect to a local area network,
including PCs and Macs.

However, I don't have experience with either (besides using StiNG to
access the Net), so others will have to help.

Cheers!

John, I can confirm the bug. For me, it is definitely offline. To
reproduce it, it is very simple. Just delete a xxxx.TXT file which is
present in XOVER.TXT. You will see that you cannot delete the entry
within Newsie. For this purpose, I have kept a 0.88 version of Newsie, to
be able to do the cleaning easily.

Here we go again with the Parallel Zip problem...

The ST lacks several lines on the parallel port, making it incompatible with
your Sparq drive.

Don't know about the 8bit.

3973. Tosbox & ST floppies

Newsgroup: comp.sys.atari.st
Date: 1998-08-03 00:00:00 UTC
From: Mark Slagell <bald_soprano@usa.net>
Message-ID: <35C60119.3738@usa.net>
Source record: 96037

The current development version of Tosbox contains a new feature for extracting files from old ST-formatted floppies (it's not quite plug-and-play, mind you; it requires some setting up, so please see notes on the webpage referred to below). While it will not read copy-protected disks, it should be able to deal with most special extended formats containing extra sectors and extra tracks, as well as the standard 360K/720K variety. This feature was not in my original plans for Tosbox, but since there were approximately half a gazillion requests....

I only have a few old ST floppies to test with here, so I'd appreciate it if some of you would take the time to try it out and let me know how well it works for you.

I've never actually backed up to ZIP as I use a streamer but I think
YOU have to select the files to be restored. As far as I remember you
double click on the archive and a window will open showing you all the
files therein. Luckily there is a Select All menu entry so you don't
have to go through clicking them all.

I've had it happen when reading Offline, I'm using a single TOS STe.

Actually it can be deleted, someone (sorry can't remember who) gave
the simple and very effective answer the other day, go into your text
editor, create a file with the offending text number, insert a word to
create a text file and save, it then appears back in the list and can
be deleted.

Regards

Trevor

Will it do any damage to the computer if you solder RCA jacks and
leave the VGA monitor connected.

Also the 640x480 true color mode flickers alot. Is there a converter
to deinterlace this output to a multisync monitor

Also whar resolution does the overscan go to....

Thanxs

Hi Dennis,

If you have T_SETCLK.APP then I assume you have the complete Time
Services package it comes from. The one to use in LOGIN.BAT is
T_BATCLK.APP which is non-interactive; it won't ask any awkward
questions :)

The complete package is available at:

http://www.stud.uni-hannover.de/~perot/cli-serv.dl-bay-e.html

Hi Kenneth,

Hey, that's a good idea! I think I'll play about with that myself :)

The Dialer takes this info (where to find LOGIN.BAT) from a setting in
STinG's DEFAULT.CFG :

```
# Used by the Dialer :
#
DIALER = 127.0.0.1
LOGIN_BATCH = F:\SYS\DIALER\LOGIN.BAT
```

It's not exactly an intuitive place for it to be, is it? I thought it
might be settable from the Dialer's Config, but it seems not...

Source record: 95856
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have been trying to attach a 12 GB Quantum Bigfoot TX IDE hard disc drive to an Atari IDE interface, but the drive doesn't seem to work properly. I never had a problem with smaller drives, but with the 12 GB model, the following problems occur:

Using AHDI, the drive is not recognised at all.

Using HDDRIVER version 6, when I try to parition the drive using HDDRUTIL, it shows up with a capacity of only 4 GB. However it does allow me to create up to 8 GB of partitions (but not the full 12 GB). The drive then works fine, although with the reduced capacity.

What is happening there? Any suggestions would be appreciated.

From: mb@tos.pl.net
Message-ID: <NRC1CE1@tos.pl.net>
Source record: 95859
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I believe it is well known that many floppy disc drives are unsuitable for use with the Atari ST machines, because the computer is unable to detect a media change with such drives. Although the Force Media Change program can be used to avoid that, this is unsuitable for game programs where the machine must be booted from the game disc.

Is there any other way of avoiding this problem? I would be very interested in a detailed explanation of why this problem happens and any issues related to it. It would be good if a hardware modification is possible to correct the problem.

Thanks.

Well I'll trade you the ability to print a range of pages for the problem of
not being able to make my HP660C driver stay as the default driver rather
than the Epson EPL 4300 device that heads the list of drivers! :-))

>I'm using version 1.98 IIRC.

That one is a bit old now, it's up to V2. something.

I don't have Dimond Back to hand, but if I remember correctly, once you
have selected the set of files to restore, I think you need to click on
one of the drive icons (so a tick appears next to the drive) to tell DB3
where to restore the files to.

Hope this helps.

Regards,

Ben Hills.

Yes, there is one in CD-Tools by Julian Reschke. You can also use
HD-Driver 7.5x and a SCSI BOS-driver, as HD-Driver emulates SCSI on
IDE-devices.

I simply hardwired the HD-detect switch on the drive to pin 2 on
the floppy cable. Works fine, but it's not that simple with drives
that has optical detection ;-)

Source record: 95868

Hi Atari freaks,

I like to build an adaptor to connect an vga-monitor and an atari SM124
monochrome monitor to a falcon 030. How can I set the proper video mode?
Maybe the connectors "M0" and "M1" are the ones to set the video mode,
but I don't know what to connect there.

Can anyone help?

Hi problem-having-Newsie-users,

got the same problem here, offline. So why not simply load XOVER.TXT into
the editor and delete the line with the missing number? Fixes it in a jiffy
too! AND saves you some more keyclicks to first store a file at the relevant
place, go back into Newsie, find the NG and delete the file :-)

>i'm looking for a software able to establish communications between a
>FALCON030 with a PC on the parrallel port or serial port.
>if you have any informations contact me.
>kef@dyadel.net

On the serial port, GHOSTLINK transfers files at the speed of
115kbit/S (>10kbytes/s). (with the serail port acceleration
program HSMODEM or FSERIAL)

On the parallel port PARCP transfers files at the speed of
approx. 70 kbytes/s

These speeds were attained between a FALCON030 and a Pentium PC.

Ghostlink is much easier to use, but ParCP is much faster

I prefer ParCP because of its speed.

Anyway I don't use any of these program anymore. I've bought
HDDriver, which enables me to transfer files between my Falcon and my PC
using a rack-mounted IDE drive.

(HDDriver can handle 2 IDE Harddisk and read MS-DOS partitions)

If you mean building a LAN, STinG may be what you need (TCP/IP stack)

I find it easier to edit the index line out of the corresponding
XOVER.TXT, especially if there is more than one in a NG. If you display
the contents of the NG folder alongside your edit window, you can check
which index entries don't have files, and also which files don't have
index entries, thus killing two birds with one stone.

There are jumpers on some drives, to change the way the drive handles media change.

There is also a program called fmc.lzh or fmc.zip that forces a media change on each access. I haven't tried it, but it should solve the problems that some people have with PC floppy drives.

Cheers,
Nick

My Atari-made Falcon is failing. The floppy drive, MIDI ports, and SCSI port all quit at the same time. I bought a used power supply, but that didn't help. Anyone know why that would happen? Is there 1 chip controlling all that?

The IDE drive, video, printer, and modem port all work just fine. So my Falcon is just fine as an Internet machine, but its isolated from the real world!

Help!,
Dave

It sounds like a problem with the DMA-chip (floppy, SCSI), but I don't
know how that could affect the MIDI-ports. Does the DSP and/or audio
work? If it doesn't then it's almost certainly a DMA-problem.

Hi, Tom here from GodFather Computer, Inc.

We have been looking into becoming an authorized distributor of the Milan here in the USA but since units are not available as of yet for english users, it is still too early for us to commit to the program. We like what we see so far but still have some un-answered questions we need to get from the Milan folk before we 110% commit to the cause.

We had good response to our earlier newsgroup post about becoming a Milan dealer and things are looking good. We believe it is important that an english web page be created by the Milan folk and that the english version of the Milan be ready for shipment before the program is put into place.

Thanks

Tom

4012. Okami and Spam

Newsgroup: comp.sys.atari.st
Date: 1998-08-04 00:00:00 UTC
From: roughley@HORMEL.unix.dsoe.com
Message-ID: <35c6bd641a2b0c0@HORMEL.unix.dsoe.com>
Source record: 95883

Is there a way to configure Okami so that during a newsgroup posting, my header's 'From:' field will use a spamblocker? As it stands now I have to add the spamblocker within the o.inf file's 'site configuration'. But doing it this way the spamblocker will be used for e-mail as well, something I don't want to do. The 'Reply-To' isn't a problem because I can edit that manually.

I'm an Okami newbie, so go easy on me ;-)

We are still working on the specifics but estimate price right now is $899 USD plus freights. Freights being the freight from Europe to USA then to your doorstop. This will be for a Milan 68040 system with 16MB RAM, 800MB to 1.2GB in size HDD, 1.44MB FDD, 2MB Video, Keyboard & Mouse, TOS 4.x and Milan OS. We will also be selling various monitors starting as low as $109 for a 14", $139 for a 15", and $229 for a 17". Our monitors come with a 3 year warranty and the Milan comes with a one year warranty.

1.1 What is PARCP?

PARCP stands for PARallel CoPier. It does copy files between two computers.
It acts as a file network running over parallel (=printer) ports of those
computers. This allows you to copy many and large files very quickly from
one machine to another.

1.2 Advantages of PARCP

It's cheap, it's fast, it's available everywhere, and it's easy.

[cheap and easy]

The PARCP cable is all that's needed to connect two computers, and it can
be build for very few bucks. You can even look around and if you find
parallel LapLink cable, you need nothing but PARCP!

[fast and available everywhere]

Connecting two computers takes only a seconds decision and a few minutes
work, no need to search for a netcard. This might even be especially
important in the case of notebooks, where netcard are not easily
available.

[easy]

Not requiring a netcard also means that apart from connecting the cables,
everything else is software configuration (which in principle could be
made very easy).

[available everywhere]

PARCP can connect two computers running different operating systems. No
need to search for a common network protocol, PARCP itself is a 'common
protocol'.

[easy and fast]

PARCP needs not to be 'installed' in the way you know it from Microsoft
operating systems - complicated procedure, several reboots, no ability to
uninstall. No! PARCP can be just unpacked and started - and it works!
Without reboots, without conflicts with other hardware or software

components, without headaches...

[available everywhere and easy]

PARCP can even connect two different platforms, like is IBM PC or clone
and Atari ST (or compatible). For Atari computers it's even more
important, because there are nearly no network cards.

[fast and easy]

Sometimes a ZIP disk is used to transfer files from one computer to
another - first copy files from one computer to ZIP, then copy files from
ZIP to another computer.

Is that easy? Fast? No!

PARCP easily outperforms parallel ZIP in reading - so if you connect
those two computers with a PARCP cable, it's more than two times faster
to copy the same amount of data from one computer to another.

1.3 Features

1.3.1 Supported computer platforms

PARCP has been designed to work on two different computer platforms:

o Atari ST/STE/TT/Falcon and compatible computers (Medusa/Hades).
PARCP is also compatible with all sorts of accelerator cards such
as AfterBurner040 for Falcon etc.

o IBM PC 386 and compatible clones (i.e. machines with 32-bit x86 CPU).
PARCP has been tested on AMD 386, Intel 486, Intel Pentium
and Cyrix 6x86 processors.

(I will use the word Atari as a reference for any of the former computers
and the word IBM for any of the latter ones in the rest of this document)

The main feature of PARCP is the ability of connecting of any two supported
computers:

o Atari <-----> Atari
o Atari <-----> IBM
o IBM <-----> IBM
...

6.2 Resources

PARCP Home Site:
==========

http://cas3.zlin.vutbr.cz/~stehlik/

Official PARCP site. Up-to-date versions, on-line history file.

http://users.zln.cz/~pstehlik/

Backup mirror WWW site. Often much faster than the PARCP Home site.

RST BBS in Pilsen, Czech Republic, tel. +420-19-227944 NeST 90:1200/7

Official PARCP BBS.

Kockens BBS in Sweden, tel. +4646250256

Another great Atari BBS supporting PARCP.

PARCP Support Site in UK:
==========

http://www.cyberstrider.org

CyberSTrider site with latest releases of the shareware and demo
software.

6.3 Getting the PARCP cable

The PARCP cable is built and sold by Titan Designs. You can order it at

Titan Designs Ltd
6 Witherford Way, Selly Oak
Birmingham B29 4AX. U.K.

Tel.: 0121-693 6669
Fax : 0121-414 1630

e-mail: TITANWEB@compuserve.com
http://ourworld.compuserve.com/homepages/TITANWEB

Alternatively you can get the PARCP cable directly from me. Just send me
10 DM, 8 US$ or 5 UKP in a (registered) letter and I'll send you the 2
metres (6 feets) long PARCP cable back.

...

6.5 CONTACTING THE AUTHOR

Feel free to send any bugreports, suggestions, remarks, registrations...

Joshua Shriver wrote:
>There is an Atari computer?
>I thought there was only the old gaming system?
>Where can I get more information on Atari machines?

Hi Joshua,
There certainly are a lot of Atari computers.
There have been several 8-bit machines and later on 16-bit (68000) and 16/32-bit (68030).
Some models: 400, 800, ST, STe, STacy, Mega ST, Mega STe, TT, Falcon.
And then there have also been a couple of game systems too - the most current one was the Jaguar which could be expanded with a CD-ROM player - and had 5 processors and 64-bit processing already a couple of years ago, before the other game console manufacturers (Sega, Nintendo)...
If you'd like to see a music studio setup based on the Atari Falcon with Cubase Audio, check out my homepage. Actually, the sync between midi and audio is better than on most PC-based systems running VST - which is quite impressive when you think about how long the Falcon has been around...

Best regards,
Claes

4017. Milan Update in the USA from GodFather Computer, Inc.

Newsgroup: comp.sys.atari.st
Date: 1998-08-04 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-04089816134400001@i386.oro.net>
Source record: 95888

If you did not see our original message a couple weeks ago regarding the Milan, please read on and then send us an email so we can get you on our database. This way we can keep you posted if you are interested in buying a Milan in the USA... Email: tj@godfather.com

The staff at GodFather Computer, Inc. would like to thank all the folks who sent us an email regarding the possibility of distribution of the Milan Computer in the USA. We must say things are looking good thus far.

We have been told an english version will be available very soon and once this happens, our plans are to acquire one for testing purposes in our USA office. We want to make 100% sure this product is made well and that it performs as advertised.

Once we feel comfortable that the english version is solid, we will start to accept pre-orders for the Milan. Our goal is to locate as many USA customers as possible for this 1st order so we can all keep our freight costs down since shipping from Europe to USA is not always cheap.

Although the exact price has not been set, here are the initial specifications of the Milan system we will be selling for approx $899 (USD) plus freights (freights being from Europe to USA to your doorstop):

Milan Computer housed in the designer Milan style case, 16MB RAM, 800MB to 1.2GB HDD, 1.44MB FDD, Keyboard, Mouse, 2MB Video Card, Milan OS, a Milan revised TOS 4.x, and manual.

GodFather Computer also sells a great line of monitors and laser printers to companion with your new Milan. 14" monitors start at only $109, 15" at $139, 17" at $249, 19" at $549, and 21" at $919. Our Digiview and Decaview monitors come with a 3 year warranty and the Milan at this time comes with a one year warranty.

Again, these are only preliminary specifications but we expect the final cut to be fairly similar if not exact. The main goal is to continue letting you know of the progress being made on bringing the Milan to the USA.

As soon as all the above items are 100%, we will add the Milan information to our web pages and begin to accept pre-orders.

Thank you again for the interest in the Milan Computer.

TJ Ferreira

4019. CAB/CGI/Variables

Newsgroup: comp.sys.atari.st
Date: 1998-08-04 00:00:00 UTC
From: schrist@interlog.com
Message-ID: <6q8dme$lao@shell1.interlog.com>
Source record: 95890

Hi Everyone,

I've been working with CGI's using my TT, CAB 2.54 (licensed) OVL
1.2805, STinG 1.15

What I haven't been able to figure out is why when I use my Atari the
variable HTTP_REFERER never seems to be set. Other variables like
DOCUMENT_URI are set? I haven't been able to figure out why? When
I test things using Netscape/I.E. they seem fine?

Can someone explain to me why... What I need to do?

Here is two log lines of things I'm trying to track:

The track values:
(date/time, host, DOCUEMNT_URI, Document, Browswer, HTTP_REFERER)

Using CAB:

902279198 ip226-120.cc.interlog.com /~schrist/b5/space
HTML_ERROR:Missing_URL Cab/02.54=Ovl/1.2805=STiK/01.12 Unknown=Ref

Using Netscape:

902279622 ts29l5.pathcom.com /~schrist/b5/links
http://www.interlog.com/~schrist/b5/links.html
Mozilla/4.04=[en]= http://www.interlog.com/~schrist/b5/

Help!

(I'm off to download the latest OVL to see if it makes a difference).

Stephen Christian
www.interlog.com/~schrist

> possible to correct the problem.

On the Mitsumi drive that I have, I've bridged the disc detect switch and
have had no problems with it since. The switch is on the left hand side of
the drive, with the motor side up, with the connector facing you. On my
particular drive, there are two markings on the board. WP for the write
protect, which is the outside leg of the switch, and MS for motor select(?)
The bridge should be made between this and the center pin on the switch.

Once this has been done, to verify that you've got the correct pins, insert
a blank WRITE PROTECTED disc and try formatting it. If it formats, you've
got the wrong pins connected. If it doesn't, cancel and open the drive
window. Change discs and press escape. If it updates, the connection is
correct, and all that needs to be done is for the covers to be put back on
and the drive re-mounted into the machine.

If memory serves, the only difference between standard single and
double sided disks is that one of the heads is missing. The positions
for the bootsector, root directory and FAT areas is the same (ie on
the "single" side). Thus, in theory there is no reason why a PC which
can read 720K disks should not be able to physically and logically
read 360K ones.

I would hazard a guess that a PC which refuses to do so is
demonstrating stupidity in its software - an older PC might not. Also,
a decent low level utility could well retrieve the data intact.
"doubler" perhaps fools such PC's into thinking they are accessing a
double sided disk by adjusting the bootsector etc so that it looks
like a double sided disk, then marking all the clusters on the other
side as "bad" so they never get accessed?

Folks who've seen postings from me in the past will remember my PC is
horribly finicky about accessing ST disks. So it came as quite some

surprise just now to discover it quite happily deals with disks
formatted single sided on the ST (today at least)!

I've looked through it, I must have missed a few points. I'd be more likely to read it in full if it were just a TXT file manual, but it's the ever popular HYP type - and as mentioned before, this isn't my favorite. :^p
BTW: I always try to read all the manuals, not just blindly post before looking there. But I'm currently suffering from new software overload - too many new programs, too much new information, and too little time to take it all in. Hence, a quick question here for the information did the trick.

But that's why we're all here, isn't it?

Unfortunately it did not work properly. Popwatch could not find the .PRF
file on my Geneva+Neodesk setup. Besides the Dialer was put in sleep
mode (Geneva) and did not wake up afterwards. Had to force it awake in
the process manager.

Oops, forgot there was a DEFAULT.CFG! Proves how easy Sting is to set up
these days.

I just purchased the ImageCopy 4.1 (CD) upgrade from Systems for Tomorrow and patched it with V4.2b1 and V4.2b2 from the FaST web page. I haven't tried all the functions, but the first thing I noticed was file loading (I just tried GIF and TIF tonight) were very fast compaired to V4.0. Scrolling a large image was very smooth without any delay between slider positioning and image alignment. Looks like there are a load of new features as well to play with this weekend.
Thanks to Systems for Tomorrow for making the update available in the U.S. (for a meager sum) and to the FaST club for keeping a must have product a must have product.

Source record: 95756

Sorry Claes, but the 68000 is actually a 16/32 bits CPU, while the 68030 is real 32 bits... That's why Atari called its computer "ST" (68000), for "Sixteen-Thirty-two".The 68000 (and 68020) has a 16 bits data bus, but 32 bits internal registers, so it's a 16/32 bits CPU. The 68030 has a 32 bits data bus, and of course 32 bits registers...

You only wrote about real "Atari" machines. But Atari is definitely out for a year now. And their latest computer, around since 1993 (?), was the Falcon, and it's "only" a 16MHz 68030. And yet, it's still in use in many home studios (and homes), as you said, boosted with boards that can speed it up to 50 Mhz.

The name "Atari" has been recently buyed by a games company which intends to sell old classic arcade games on the actual game consoles. It seems they have no will to make a new Atari computer, not even a new Atari console.

Now, if you want to buy a new "Atari" computer, you must look for a clone. Power users should use a 68060 Hades computer (cf. http://www.stud.ee.ethz.ch/~caschwan/mhades.html) , and others will look for a 68040 Milan computer (see http://www.milan-computer.de) or a 68040 Phoenix computer (under development). All now use standard ISA or PCI boards so they can easily be updated.

As of operating systems, a few ones are in use : TOS (the historic monotasking ST OS), MultiTOS (the multitasking version, designed for Falcon computers), Geneva, Magic, Linux of course, and others are still under development : Dolmen.

These machines are designed to run home-office, internet, multimedia software, just as PC compatibles (but with a much better OS, with a real preemptive multitasking like Unix's) and of course home studios and desktop publishing (Calamus).

The Atari systems users are now self-supported, since there is no more any major company to control the market. And Atari users are rather fans. Most of our machines are old STs or Falcons with a lot of hardware and software releases so that we can have faster CPUs, better graphics.... but we don't change our multi-patched systems into modern PCs anyway. Because our systems are effective (who really needs Word and Excel at home ? who really needs a 300 MHz CPU while a 60 MHz one might do approximately the same job ? Any 300 MHz Pentium is more powerful than a 60 MHz 68060, but the power of the CPU goes into Windows, and it never gets out...), cheap (I don't have to release my system every year) and stable (I've just re-installed Windows on my office computer. It might be the 6th time in a year. I've never had any corrupted file on my ST system in 6 years...). And because we're all fans, and not only customers, Atari systems are still evoluting.

But even the newest "Atari" clones have now weak CPUs, compared to the latest Pentium/PowerPC/Alpha CPUs. So, they'll have to update it, as it's being done for Amiga Computers (another alternative 68xxx architecture, now moving to PowerPC). With the difference being that Amiga now belongs to Gateway, a big corporation that has money, whereas Atari clones are designed by little companies. Who knows if these will be able to design the new mainboards and release an updated OS required by a new CPU ? A solution might be the Motorola Firewire, which is a up-to-date RISC CPU compatible with the old 68xxx CPUs. But it's not totally compatible. Anyway, it would require only minor revisions on mainboards, and the actual operating systems could run on it (even if not optimized for, in the beginning)...

About the game consoles (Jaguar). Well, they were the first 64bits consoles. 2 years before Nintendo. 1 year before Sony's 32bits playstation. So they should have been a hit, but Atari wasted it all... I sometimes read about a Jaguar II project, but nothing seems to really happen. The point is that now, a game console is a major corporation matter. The 3DO consoles, designed by a little company, which were supposed to become a new standard after Sega and Nintendo 16 bits consoles, are now history. Even Sega, yet a major company, but not as big as Sony and Nintendo, seems to fade away. So how could a little Jaguar II come to be a console standard ? It would require a company as big and powerful as Sony.

Bye...

Claes Holmerup <claes.holmerup@mailbox.swipnet.se> a &#65533;crit dans l'article <WuMx1.2502$JR2.3465835@nntpserver.swip.net>...

Thanks, Jo for anything you can tell me.
Audio does work, I'm listening to a WAV file thanks to PHPlayer.ACC in the background. Not sure how to test the DSP, doesn't the DSP chip decode JPG's for the Apexjpg.ttp viewer? It does seem to have slowed way down.

So the Floppy and SCSI are controlled by the same chip? I can see files on my SCSI drives, but can't run, copy, or move them.

I had to go to Motorola since I've heard nothing about this chip, and I found out lot's about it, really seems to be the thing of the future if you ask me! But I had to reply to your posting just to say it's named ColdFire and not FireWire.

Anyone intrested in the ColdFire / FlexCore microprocessor architecture can visit http://www.mot.com/SPS/HPESD/prod/coldfire/core.html for information on the third generation of ColdFire processor and also http://www.mot-sps.com/sps/General/chips-nav.html for more general information.

Still sounds like a DMA-problem, especially if floppy-disks are
corrupted when you copy files to them. Try booting in ST-High or some
other small mono-resolution and see if the problem's still there. If
not, then boot from a floppy with a fresh copy of your harddisk-driver
in the autofolder and check if it's a software-problem.

Hi!

I'm a student who is doing research for a dictionary about Atari. After looking 'round the web for some time, I still haven't found out what Atari really is today...

Atari Inc. was founded by Bushnell in 1972, and after that it has been split up, sold etc a lot of times.

What divisions of Atari still exists today? (Software and hardware)

Who are the owners of these divisions?

I hope someone can answer these questions, or point me to a web-site with info. about this!

Thanks!

Hello!

Is there a way to configure STiNG so that after it connects,
it immediately runs a client, like CAB? Most of what I do on the net
somewhere along the line involves CAB, and since I can get to the
clients I use the most through CAB, I thought it would be a great
shell for Internet use. Having it run automatically would be easier
for me. If it's not possible, I'd like to recommend it for the next
version of STiNG.

Erlend Neergaard (erlendne@stud.ntnu.no) wrote:
:
: What divisions of Atari still exists today? (Software and hardware)

AFAIK, Atari was split into Atari Computers and Atari Games when Warner sold Atari Computers to the Tramiels. Things staid that way for many years until about two years ago. Now Atari Computer doesn't exist at all. Hasbro owns all the intelectual property that was Atari Computers. Atari Games was bought recently by Williams/Midway (a conglomeration of several of the big arcade game companies) which has since subdivided. Currently, arcade products continue to appear with the Atari Games nameplate. Their website is http://www.atarigames.com/

Also of interest for an encycolpaedia entry about Atari would be where all the talent that made Atari products are now. Project X springs to mind. A good resource would be two article from 'Wired' magazine, the first, about Project X, is in the July issue and so isn't on the web yet, the second is at http://www.hotwired.com/wired_online/4.10/atari/

>His floppy is not recognized by DOS. Is there a way to solve this problem?

The floppy has been formatted by an old version of TOS (The Operating System!) on the Atari. However, if you format a floppy on the PC under MSDOS (making sure you do it for 720K) that will be usable on both machines. Then all your brother has to do is to copy the file to the new disk on his Atari.

>Once the floppy is recognized, is the document readable by a DOS/Windows based

>loads the word processor and opens the document can it be saved in ASCII?

Well I'll be surprised if any PC program will read it.

The best thing to do is exactly as you think. Run 1st Word and save as text. In 1st Word this is achieved by going into the drop down menus and unticking "WP Mode". Then if he saves the file it'll be saved as ASCII.

>If you can help please email duffy@aros.net. Thanks!

No problem!

Hello!

When I login to Zetnet, StiNG contacts Demon Internet's time server to set my computer's clock.

The question is, does anyone know whether this has been checked for the Millenium Bug??

The Atari is unaffected by the Millenium Bug (with the exception of the Forget-Me-Clock cartridge setting program!), and I was wondering whether using this method of time setting would lay Ataris open to the problem.

Unfortunately, although this is correct usually, when you have to
rebuild the logs this doesn't work - you have to restore the whole
lot.

I am afraid you haven't understand the information completely. The
ColdFire is only more or less sourcecode compatible to the 68000.
Migrating to this processor wil make all current applications
incompatible.

Yes, of course, that's what LOGIN.BAT is for. On successful login it
will run all programs in the script. ATM I just use it to set my
system clock from the ISP but there are any number of things you can
do from the script.

Make sure the LOGIN_BATCH line in DEFAULT.CFG points to a valid script
file and is uncommented. Make sure DIAL.SCR has been configured to run
the script (Config./Misc.), reboot to re-load STiNG. Next time you log
on you will see the progress of the login batch file monitored in the
'String' line of the Dialer dialogue after 'Success' is indicated.

> And to think someone _intentionally_ designed it to require this much work!
> :^\

yeh, my first reaction as well!! :)
but with qed it was easily solved.
Open up start.set with qed, size the window so it takes up about 1/2 to
2/3 of your desktop.
open up a drive with the programs you want to put into Start-Me-Up and
position in the
remaining desktop space
example: (<tab> denotes hitting the tab key, not typing in tab!)

/menu<tab>sample
<tab>/file<tab>HDDriver Util<tab>|

the "|" stands for your cursor, leave it blinking in qed, and move your
cursor over to your
hard drive, and double click your folders until you come to the program
you want to add(in this
case Uwe Seimet's HD_ Util.prg). start.set in qed should still be the
topped window (I was using MagxDesk).
Now, holding down the shift key select the prg and drag it over to the
open start.set window in qed,
and release the mouse button. You don't have to release the mouse 'over'
the flashing cursor point,
as long as you release it over the start.set window, it will find the
cursor point of entry.
the path and file name will be automagically entered at the cursor
point.

<tab>\file<tab?HD Util(tab>C:\utils\HDdriver\HDutil.prg
<tab>\menu<tab>other utilities
<tab><tab>\file<tab>waddyawant?<tab>...
<tab>/end
/end

In SMU this would give you a menu item called "sample", within which you
would find the "HDDriver Util"
and a sub-menu called "waddyawant?"within which you would have what

ever?!! :)
DONT forget the /end to close off every /menu item

hope this helps

Hi Mish

POPWATCH searches for o/s mail to send when it is activated and says
how many are ready to go, does this mean it will now "CONNECT" to the
Zetnet mailbox as well without being asked or have I completely
missed the point?

First of all
LOGIN_BATCH = F:\SYS\DIALER\LOGIN.BAT is not in my STinG DEFAULT.CFG
should it be? (amended to C:\ etc of course)

My set up is:
STING\DIALLER\LOGIN.BAT
LOGIN.BAT reads
C:\STING\TOOLS\SAVE_IP.TTP C:\DIALLER\IP.INF Modem 1

Does the system create IP.INF as there is no IP.INF file anywhere. I
know because I have scanned the entire hard drive with PARAFIN.PRG and
this is a "Martini" .prg it will find any file anywhere, any place,
anytime!

If you want, you could say that VM Labs' "Project X" is the Jaguar 2 (or 3),
and it's totally different from the other game systems in that it has the
potential to become a true industry standard.

4062. Serial Port Solved

Newsgroup: comp.sys.atari.st
Date: 1998-08-05 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6qap2p$soh@enews2.newsguy.com>
Source record: 95783

I posted a while ago about some problems getting my serial port to operate at anything faster than 38,400. The modem wouldn't even go "off hook" if it was set any faster than that. And yes, I use HSMODEM 7 (and also tried FAST_SER). Well, I decided to replace the modem cable itself (someone here mentioned that a while ago), so I bought the shortest one I could find - 6 feet (my old one was 9 feet), and now 57,600 works fine - although that seems to be the upper limit on my unmodified (waiting for Nemesis!) Falcon. But that's ok, since I've only got a 28.8 modem. Even still, I _do_ notice faster speeds at 57,600 compared to 38,400.

* Update (15 minutes later):

Now it's flaky again at 57,600 - working maybe 5 out of 10 tries. It used to be 1 out of 10 tries, so I guess it's a little better. I should have known that as soon as I mentioned success, it would stop working!!!

What the #$@% could be casuing this besides a (somewhat) bad serial port or a (somewhat) bad modem?

Any ideas?!?

From: ecncomr@socal.com
Message-ID: <6qap2r$soh@enews2.newsguy.com>
Source record: 95784

I've set up ST Guide in my MAGX.INF file as follows:

#_ENV STGUIDE=C:\ACC\ST-GUIDE.ACC

I assumed that doing this meant that ST Guide would load and display a HYP file when called from a program (ex. pressing HELP key within NEWSie) - even though ST GUIDE was not actually installed as an ACC.

It did work at first (it loaded ST Guide as an ACC and displayed the HYP file), but not now. What did I do wrong?

I also tried it like this:

#_ENV STGUIDE=C:\ST-GUIDE\ST-GUIDE.PRG

And it, of course, loads ST GUIDE as a _program_ in MagiC and displays the HYP file. However, most software that makes use of ST GUIDE seems to only look for the ACC version, and won't work properly when ST GUIDE is installed as a regular (MagiC) program (not an ACC).

Any thoughts?

Dear Friends,

Hello, a friend of mine who has no money, has an old ATARI 1040st
that someone gave her and she is a talented writer who just landed her
first paying writing gigs, but the pay is small and the publisher wants
the doc's in mac format.

I have the mac and will do the transfer for her but I need some sort
of app that will read the atari wordwriter doc's, Any suggestions?

Thanks,
Marcus

I tried this with POPWatch and it bombed on me big time (about 10
bombs). POPWATCH.PRG showed up in the 'Sting' line, and then it
bombed.

I have a feeling that only .TTP programs can be launched in this
way.

Okay, I'm late, but the monthly winner of the Atari Computing
3 volume/6 month subscription is:

Me!

Okay, let me explain...unfortunately, we didn't have any new
Atari callers last month. Sure, we had Atari callers, and all
of the Atari callers had already won a subscription prize from
previous months...so I gave this months to myself... ;-)

Folks, I can't give'em away if nobody calls, so if you want to
win a *free* 3 volume/6 month subscription to Atari Computing,
then all you have to do is spend 5 mins each month, making a
call to the DarkForce! BBS...its that simple. If picked as the
monthly winner, that 5 min. call could net you some of the best
Atari-related reading this side of TOS heaven... later... ;-)

Okay, I've decided to do something different this month at the
DarkForce! BBs...

Its now 8pm, Tues. the 8th (August), and the very next Atari
caller to our BBS will win a 6 month/3 volume subscription to
Atari Computing...all you have to do is call and be the 1st
caller, from the time I've posted this message. Go aheah, go
for it! ;-)

PS (And good luck!)

Cross-posted to: comp.sys.atari.st,comp.sys.handheld,comp.sys.palmtop,comp.sys.atari

I have 3 New Atari Portfolio Cards which are boxed and sealed. These were once upon a time sold for over 150.00 each. I will sell for only 19.00 each.

BTW: I also have another one which is boxed, and has been slightly used (used once for testing). I copied acom onto into while I was at it. I will sell this for only 15.00.

These are going to go fast, as they are hard to find, and the retailers that still carry these charge alot more. If your interested or have any more questions please email me at: gehring@shaw.wave.ca

Thanks!
- Mike Gehring

Thanks. I actually _did_ this very thing last Saturday, and I have a pretty decent START ME UP .SET file going right now - although there certainly is more to add! Very nice little program once you get it going. It's not as much work as I thought it would be on first glance at the (demo) .SET file.

Message-ID: <pq7y1.642$ke.1186717@news1.atl.bellsouth.net>
Source record: 95648

Bushnell sold Atari to Time Warner. In 1984-5 Jack Tramiel bought
Atari, Paine Webber took Atari public in 1985 @ $9.00?. In July 1996
Tom Mitchell, and J. Tanden reverse merged Atari corp and JTS Corp.
Montgomery Securities put that deal together and put out a nice report
saying that the new company would exceed $800 million in sales in
1998. JTS then attempted to float a $100 million dollar bond through
Jeffries and Co. That deal fell through, so JTS/Atari sold $25
million in convertable preferred stock to a few hedge funds . The
conversion feature had no floor, or dilutitive covenants. The hedges
shorted the shit out of JTS/Atari stock, converted their preferred and
blew up the company. In a last ditch effort to raise capital to stay
listed on the AMEX, T. Mitchell sold the Atari rights for $5 million
to Hasbro Interactive. This included close to 100 specefied patent's
and intellectual property rights.

......to be continued....

Now that I solved my TV output problem, has anyone tried to run the 640x480 x 65k overscan mode through an Amiga Flicker Fixer, or something similiar. I know there are converters that will take a composite signal and convert it to be used on a VGA monitor. Will that eliminate the flickering in this mode. The Falcon seems so much quicker in this mode.

This should be in the next beta. I never put it in as in many
situations it's impossible to know. However I am working in support for a
subset of actions where it is known. Such as POST.

Dan Ackerman
aka baldrick@netset.com

4081. NOVAINFO for use with NVDI ET4000

Newsgroup: comp.sys.atari.st
Date: 1998-08-06 00:00:00 UTC
From: baldrick@dilbert.netset.com
Message-ID: <35c92924.0@athena.netset.com>
Source record: 95652

I have released a small TOS program to retrieve the screen base
and register base addresses of a NOVA card for use with NVDI ET4000.

The addresses work with VMG for me, but I can't actually get
REDIRECT to work. If I dump REDIRECT and use EMULATOR (from the NOVA
package) I do get a decent ST High screen on my graphics card. That's it
though. Any other resolution is corrupted. I'm certain that this is due
to EMULATOR.

So if you have NVDI ET4000 and a NOVA Card (with ET4000 chipset)
give this program a try and see if you have any luck. If you do, please
email me and forward the info on to this newsgroup as I believe there are
a few others around like me, who would really like and try NVDI as the
driver.

Good Luck and Thanks,

Dan Ackerman

aka baldrick@zeus.netset.com

Unless it's a script or something else that needs a lot of formatting, why
don't you have her save it as ASCII text, then bring it to your Mac? And
even if it does need formatting, if you get the text onto your Mac, it
would be relatively easy to add any needed formatting there.

I can't really believe that a company as large as Demon Internet have not
thought of this situation, and tested, and corrected it by now.

I'd suggest you email Demon, but then again, perhaps not if your actually a
Zetnet customer they might not appreciate it :)

TBH I really wouldn't worry about it.

I think you'll find that this won't actually work for programs such as CAB,
POPwatch etc. STinG's LOGIN.BAT is not suitable for this kind of thing
because it executes each program in turn, but only after the last one has
finished. Fine for a small time setting program that does it's thing and
terminates, but not for CAB etc. that will not terminate.

AFAIK there is currently no way to run programs such as CAB, POPwatch etc.
immediately upon connection. I've been meaning to write a small program
that can be called from LOGIN.BAT that does just that ie. launches programs
without waiting for them to finish, but I just don't have the time ATM.
Perhaps someone else out there can do it? It's a very simple program.

>version of STiNG.

Well, an easy (if not the best) way is:

Run the STinG dialer as an ACC.

With a boot manager (I use X-Boot III), set up CAB to autorun with your STinG
setup. Then, when booting, CAB will automatically load. After this, use the
ACC version of the STinG dialer to connect to your ISP, and CAB is ready to go.

Think you mean par_pc...
You can find this proggie at ftp://193.190.205.13/Atari/Network/other/
There is also somewhere a home-page of the soft.. don't know where...

Ghostlink uses the serial ports I thought.

This is the right way to do it with Magic as you don't need it hanging
around all the time as an ACC. But, try also including the _ENV
ST-GUIDE (note the hyphen) - some prgs. look for this variable.

>And it, of course, loads ST GUIDE as a _program_ in MagiC and displays the HYP
>file. However, most software that makes use of ST GUIDE seems to only look
>for the ACC version, and won't work properly when ST GUIDE is installed as a
>regular (MagiC) program (not an ACC).

No, no. Your problem is probably the location of your HYP and REF
files. Look at the STGUIDE.INF. There are steering parameters which
tell STG where to look for the files.

Your best solution is probably to put ALL your REF HYP in one folder
and then tell STG (via the .INF) where that folder is. The only other
way this could be managed would be if each application asked you to
'install' the path to its own HYP/REF files. Very messy and I can't
think of any prgs. which do this.

There are some supplied with Magic 5 (in
\GEMSYS\GEMDESK\KATCHEL.PAT\).

If you want a bigger selection then download the demos of Thing and
Jinnee which have folders full of other patterns.

It can't be quite as simple as this, Ross. Peter R. has issued a
bundle of 'time-clients' which are APPs. While I use the one which
runs as a batch, T_BATCLK, there are others which indulge in GEM
interaction with the user.

If Peter sees this perhaps he will tell us what restrictions there are
on programs run from the LOGIN script.

you can't go too far wrong with Elfback, which I registered with
John Kormlyo a few years back for $10 US. A reliable backup program
that'll back up to floppy disks (although you can also back up to hard
disk partitions, which I'm now doing with an EZ 135) and supports
compression so you won't need to use as many floppies.....

I had that same problem until my ISP cut mee off completely. When I called
they gave me a new phone number that happened to be a digital phone line.
Now 57,600K baud is rock solid and my DATA transfer speeds have gone up considerably.

It just happened to be the phone lines that were causing the problems.

As a long-time Atari user (my expanded 520st still sits on my desk next to my 9500/200, it does midi better than my Mac!), I think she's out of luck with translating the Word Writer format. However, she can save her docs as plain text files onto a DOS-formatted 720K disk that your Mac will be able to read.

Now, I could be wrong about a Mac translator for Word Writer format (De-Babelizer, or is that only for graphics??), but something tells me I'm not. Good luck!

4102. New Base 64 encoding

Newsgroup: comp.sys.atari.st
Date: 1998-08-06 00:00:00 UTC
From: <>
Message-ID: <35c8fb15.0@news.ptw.com>
Source record: 95673

I get a good amount of mime base 64 encoded Astro picture files,
during the last 2 months I've run into something, it seems that
Microsuck has changed their way of doing the encoding.

All the old files had the file like this:

Begin base64 soso.jpb
mfjofsanvanfqwqwrgasfw

Now I'm seeing ones that instead of having the begin base64 and
name of jpg/gif on the 1st line, it not has it up in a header 2
or 3 lines above the start of the file. With these new ones, I
get the message Decode Failed, the older ones decode just fine.

Is anyone going to work on updeating the decoder to work with
these new file formatts?

4105. Online PD - The free internet Atari PD Library

Newsgroup: comp.sys.atari.st
Date: 1998-08-06 00:00:00 UTC
From: Deano@zetnet.co.uk
Message-ID: <35d2e0f9.2195006@news.zetnet.co.uk>
Source record: 95676

Well it's going ahead. Online PD is a new PDL with a difference. Instead of sending money for PD you can now download it directly from the internet. The site is set out just like a PD catalogue and it has download links to the software you want. Unlike Ftp sites there is no need to wade through loads of folders to check for the software you want - cos everything has a decent description and a direct download link.

If you know of any good PD that I can include in the library then please send me the info. It must be on the internet because I don't have time to upload it anywhere.

When you send me a submission I don't mean send me the actual program. All I want is the following info.

Program Name: (IE: Llamatron)

Program Type: (IE: Game)

Machine: (IE: Is it an ST,STE, or Falcon only program?)

Emulator Compatibilty (IE: Does it work under Pacifist?)

Program Description: (IE: Llamatron is a game by Jeff Minter and a clone of Robotron. The object of the game is to shoot llamas etc...)

(Please supply a detailed description.)

Download Link: (IE: ftp://funet.fi/games/shoot/llama.zip)

This is a good way of getting your program noticed, or any other PD programs you know of.

Housed in a nice heavy duty under the monitor style case with two drive bays, this case with its lighted power button on front of the case has a 400MB SCSI drive in one bay and a Syquest 44MB Removable Hard Drive system in the other bay. This system connects to any SCSI based computer platform. The Syquest drive comes with two cartridges.

This would make for a nice storage device for any system. $199 plus freight.

4115. FS: Freedom Stick "wireless remote control joystick" for Atari

Newsgroup: comp.sys.atari.st
Date: 1998-08-06 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-0608981329480001@i358.oro.net>
Source record: 95686

Works on Atari, Sega, Nintendo, and Commodore. This kewl wireless joystick is great for playing games with. Made by Camerica, this wireless remote control gives you the feel and action of an arcade joystick, and includes a rapid fire button.

$25 plus freight.

*I used on my older Atari machines and my Sega Genesis. Works great and like new.

4116. FS: HP and Postscript compatible Laser Printer $299 (will work on Atari)

Newsgroup: comp.sys.atari.st
Date: 1998-08-06 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-0608981342220001@i358.oro.net>
Source record: 95687

Qume Crystal Print Publisher II, 6MB RAM, 6 pages per minute, 300 x 600dpi, postscript, HP PCL, 39 built-in fonts, letter and legal paper trays, manual feed tray, like new drum (less than 100 pages on it), new toner set, user manual, maintenance manual, works great!

I used to use on my Atari using PageStream 2.2b with the Postscript and HP drivers and it worked well. In fact, I also have PageStream 2.2b for the Atari for sale, in freat complere shape.

The Thing desktop package comes with a nice folder of tiles. There are also
some web sites with suitable colour textures available. I did have the
address of a particularly good site, but I can't find ATM!

Kind regards

Mike Kerslake

Ho Trevor,

AFAIK, POPwatch _won't_ automatically CONNECT for incoming mail unless
you tell it to when you're calling it from a command line (e.g. in
LOGIN.BAT, using the /c switch). Else, you have to click on the
Connect button :)

>First of all
>LOGIN_BATCH = F:\SYS\DIALER\LOGIN.BAT is not in my STinG DEFAULT.CFG

Aye. Just point it at where your LOGIN.BAT is :)

You're using PPP aren't you? If so, you don't need to use SAVE_IP
(it says in TOOLS.TXT).

Otherwise, I gather that the IP.INF file will be created when SAVE_IP
is run. (I'm using PPP, so I don't _know_ for sure...)

Hmmm, PARAFIN-based Martinis. If I tried drinking those, would it make
my humble STe run faster? ;^)

TTFN,
Mish

Hi guys,

I've tried this today under MagiC, but POPwatch (and NEWSwatch)
doesn't find its .RSC file :(

I didn't try specifying any command line parameters for POPwatch, but
ATM I don't believe it's going to work... There's another thread
going: 'Running prg after STinG', and the indications there are that
only certain sorts of program will work from LOGIN.BAT :((

The other possibility seems to be (if you're a Thing user, and I'm
not), setting the PRG/APP to run at boot-up...

Small comfort, huh?

Hi guys,

There's a prog called EXECUTE by Mikael Lundqvist that _might_ fit the
bill.

It's supposed to allow you to run tasks in parallel with a CLI under
MagiC, Geneva, etc. That might fit the requirement Gary has pointed
out, hmmm?

Unfortunately, I don't know any 'net location for the prog; I read of
it in a Floppyshop update (disk: UTL.6181).

So, anyone seen this in an FTP site? (Allowing Gary to concentrate on
his excellent 'watch programs :^) .)

HTH,
Misha

Not sure about having the dialer auto-run a prog, but why not start CAB
and use the 'Open Local' menu option to start the dialer. That way, when
you quit the dialer, you're straight into CAB.

I've been trying a multiple-user Okami installation, with the second account for posting to the newsgroups. During a followup or new post, I just login under the second name (as I've done here). The only drawbacks I've seen so far are that my e-mail and article archives become segmented, which really isn't much of a problem anyway; and I can't match the spamblocker in my sig because the 'site' and 'domain' names are culled from the o.inf file. Two environmental variables (logname and passwd) have to be defined or else my default logname shows as 'root'.

Your method of the spamblocker being resident in the o.inf file and manually changing the 'Reply-To:' makes the most sense. And here I went and took that header out, thinking it would be best to deal with just one address ;-)

4129. Bitmap system fonts (NVDI)

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6qdmq3$7c3@enews4.newsguy.com>
Source record: 95700

My Falcon and I have gotten kind of bored with our current system font under NVDI 4 (called MONOCO). It came with NVDI way back when. Anyway, I was looking through my archives, and a couple of CD ROMs to try to find some different bitmap fonts (.FNT type), and it seems that the few that I had in 8,9,10 and 20 point (what I _think_ NVDI / ASSIGN.SYS requires) didn't seem to work - I just got the system font (yes, I know where and how to edit the ASSIGN.SYS file to assign new system fonts).

So, does anyone have any good / different / MAC fonts / etc. (.FNT type) that work under NVDI as a system font? I haven't really checked many FTP sites yet, but I'm willing to if anyone knows of any that have what I'm looking for.

Thanks!

Hello!

With the help of people out there in the newsgroup, I did
actually get CAB to run from STing using the LOGIN.BAT file. I have
Geneva and Neodesk, so I don't know how it would work on a
single-tasking system. I can't get POP Watch to work that way, but
that's ok, since I don't really use it all that much. Also, you can't
get multiple programs to run together. One must end before the other
can start.

Anyway, CAB does work this way, at least with my setup. I'm
not sure what nuances keep it from working on others.

Very sorry about the bug. It appears only in Offline mode apparently,
and I have corrected it in 0.92. (Still under development)

>BTW, the KILLFILE feature is excellent in v.90 WRT to incoming mails being

Oops. I though I had removed the hint of that feature from the
KILLFILE example, but apparently not.

The 'Acknowledgement' feature does not yet exist. I initially thought
about it to acknowledge when I was not at the computer, but then
realized that I have to be at the computer to logon to get the mail,
etc...

So I'm not surprised it doesn't work. Is it a feature that you would
use? If so, how?

To connect your Mega to a PC LAN, the first thing you will need is a TCP/IP Stack. If your main intention is to share your PC's modem, and you don't need NFS etc, you could use STinG. STinG is a simple to use, easy to install TCP/IP stack that supports both the SLIP and PPP protocols. You can find STinG at:

http://www.stud.uni-hannover.de/~perot/index-e.html

Then you will need to connect the Mega to your PC LAN. There are Ethernet cards available for the Atari platform, but I know very little about these (and I don't think STinG has any Ethernet drivers yet) so your best bet would be to connect your Mega to a PC in the LAN via serial cable. If you are using Windows 95, I understand that it can be a bit fiddly trying to setup a permanant TCP/IP link via a serial port. I do not know how to do this, but there is some information on my Home Page from a guy called Gerry O'Rourke that should help you out:

http://www2.imperial.co.uk/home/ben/pc2st.htm

Finally, if you intend to access the Internet from your Mega, via the PC's modem, your PC will need some form of Proxy service or IP Masquerading service.

This is only a rough outline (and I am no an expert on networking), but I hope this helps. :-)

Regards,

Ben Hills.

I have to agree with James. The DMA and the DSP use the same clock (unless you accelerated the DSP) and the floppy runs off a divided signal from the same source. I wouldn't even think that you would be able to view a SCSI device with a complete failure however. Maybe your clock buffer has a bad solder joint. You can test your DSP with Nembench. I think that it is on Titans web site.

Hi!

starlord@Slc.Dennis Bishop <*ptw.com> wrote:
: All the old files had the file like this:

: Begin base64 soso.jpb
: mfjofsanvanfqwqwrgasfw

: Now I'm seeing ones that instead of having the begin base64 and
: name of jpg/gif on the 1st line, it not has it up in a header 2
: or 3 lines above the start of the file. With these new ones, I
: get the message Decode Failed, the older ones decode just fine.

Well, a correctly MIME- and base64-encoded attachment looks like this:

Content-Type: application/octet-stream
Content-Transfer-Encoding: base64
Content-Disposition: attachment; filename="sw.jpg"

/9j/4AAQSkZJRgABAQAAAQABAAD//gBJQ1JFQVRPUjogWFYgVmVyc2lvbiAzLjEwYSAgUmV2
OiAxMi8yOS85NCAgUXVhbGl0eSA9IDEwMCwgU21vb3RoaW5nID0gMAr/2wBDAAEBAQEBAQEB
AQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEB
AQH/2wBDAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEBAQEB
[...]

So, it rather seems that your old messages had a wrong format, not the
new ones. Or do the new ones look different, too?

Btw, what decoder were you talking about?

Ciao

Thomas

I haven't decided yet. I live in Southern California, so a drive to Vegas wouldn't take _that_ long. But I work Sundays, so I would have to drive there either late Friday night or early Saturday morning, go to the show, and drive back by Saturday night. Hmmm... <pondering the trip>

And I've got a few ST and 8-bit items that I don't really use, but I don't know if I'm ready to sell them yet.

4142. Start Me Up / MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6qej19$6bp@enews4.newsguy.com>
Source record: 95713

Well, I just finished editing my Start Me Up .SET file, and now I have pretty much everything I need there (for the time being). It took a little work, but it wasn't _that_ painful, and once set up, SMU is a very handy little program.

And I did it all with QED - never touched the SMU Setup program. ;^p

And I also messed with MagxDesk a bit more (remember, I'm a new MagiC user) and got it set up a little better, with a lot of installed applications, icons, another viewer (1st Guide) and installed editor (QED), and a nice background. So things are coming along ok for now.

But I can't seem to be able to install an icon for my (seldom used) CD ROM drive. I haven't had it hooked up for a while, but I did today, and it works fine under TOS (ExtenDOS 2.3 I think), but under MagiC 5, the drive isn't recognized. And MagxDesk isn't like TOS 4 where you can just create a drive icon for the drive, and it's recognized. Do I need a newer version of ExtenDOS, or am I missing something here?

BTW: I sure wish the manual that came with MagiC 5 wasn't the MagiC 4 manual! There seem to be a lot of discrepancies between the MagiC 4 manual and the actual workings of MagiC 5 - and I don't know where to find DOCs for those different MagiC 5 features. No READ_ME files (other than one about long file names) came on the MagiC 5 master disks. Anything available on the web?

Oh well...

>that have what I'm looking for.

Have a look at the archive below, which contains about 30 different 10-point GDOS bitmapped screen fonts. Some are plain silly, while others are quite nice (Cherry, Codehead, Courier2, Courbold, Eurothin, Mac3, Round). These fonts were assembled by a former GEnie user:

http://www.excelprinters.com/scrnfnt2.zip

Also, visit Malcolm Cooke's pages and download his Monaco variant, the name of which I forget right now:

http://www.spirit.net.au/~mcooke

While you're there, download his nice collection of desktop icons, too.

Another screen font you might want to look at is called Dcheneva (bundled with the Thing desktop). I think it's the nicest screen font I've seen next to Monaco, and it comes in multiple sizes unlike the fonts in the scrnfnt2.zip archive.

After all these years, though, I'm still loyal to Monaco because of its legibility. If you 'return' to Monaco, discontent after trying different screen fonts, visit the URL below to download an ISO 8859-1 version of Monaco for use with NEWSie. The font is intended as a supplement to the existing Monaco screen font, so that foreign characters don't appear as 'garbage' (NEWSie doesn't support character remapping):

http://www.excelprinters.com/monaco.htm

You can use any icon set in .RSC format. I.E. those you find with Thing or Jinnee. In MagiC 5 you are not restricted to only one .RSC file. You can use up to ten (I think it was) in your /gemdesk/rsc/ -folder.

Did you mean PDF or RTF (Rich Text Format)? The latter retains a lot of formatting and may work, but I don't think any program produces PDF.

I agree with your suggestion about the physical transfer of the files from Atari to Mac.

To get a transfer of the files ina form suitable for a Mac word processor, apart from plain ASCII, the following might work. Save the document in First Word format (I know nothing about WordWriter, but this may be possible, as it was the earliest and most basic Atari word processor), then import into Marcel (I thin this imports First Word docs, itcertainly exports them), a free Atari word processor which saves in RTF format.

Then, because of the CR/LF problem you mention, as it may not be possible to do a search and replace in the Mac word processor for the LF character (it may, though),there are plenty of free and shareware Mac products to do this strip.

4156. Help! Falcon and video monitors

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: staylor640@aol.com
Message-ID: <1998080719062700.PAA23415@ladder03.news.aol.com>
Source record: 95727

I bought a Falcon030 system awhile ago. It has 4 meg RAM (more that I have not installed yet), internal hard drive, etc. It came with a lot of good original software. I have an older Samsung SVGA monitor that I hooked up to it using an interface plug from Atari. I can use the word processors and other text-based utilities, and I can even view some JPEG pictures. But when I try to run the games I have, such as Civilization, Llamazap, Test Drive, etc., the screen flips all over and I can't see anything well enough to play. I tried switching to low res mode before running the games, as I would do on my 520ST, but that did not help. There is a program called NVDI running on the computer, would that have something to do with it? Or do I just need to find the right video monitor? I also hooked it up to a NEC Multisync 3V from the office, but I still could not get the games to display correctly.

Do you have any suggestions for me? If I need a different monitor, would you please recommend specific models that work for you? Did Atari make one for the Falcon that could handle the colors and different Falcon video modes?

TIA,

Steve

Hello,
to add more icons to Magxdesk, you can simply copy the .rsc file to:
C:\GEMSYS\GEMDESK\RSC*
This is of course if you have installed MagiC on your C drive and
have not changed the default path.
Anyways, just pop in your rsc file, reboot, then you can use
it......

>background. So things are coming along ok for now.

Thats good to hear-
Make sure to install Bartons' AV SERVER to let Magxdesk understand the
av protocol. You should also install a few other MagiC apps, my favorites
are:
LOGBUCH: I have this installed as an acc, and it keeps track of the last
10 programs I executed (doesnt have to be 10, its user configurable)
, and makes it fast and easy to launch them again.
The nice thing about this is that it supports StiC so you can assign
an icon to each program.. something SMU is still missing.
APPLINE: Looks nice together with SMU :-)

ANd of course make sure to install AVserver, Stewart/StiC, and replacement
shutdown...

>But I can't seem to be able to install an icon for my (seldom used) CD ROM
>drive. I haven't had it hooked up for a while, but I did today, and it works
>fine under TOS (ExtenDOS 2.3 I think), but under MagiC 5, the drive isn't
>recognized. And MagxDesk isn't like TOS 4 where you can just create a drive
>icon for the drive, and it's recognized. Do I need a newer version of
>ExtenDOS, or am I missing something here?

I had troubles with ExtenDOS under MagiC aswell, but the newer (newest?)
version works well with it. However I cant help you here because ive switched
to SPIN! to access my CDrom driver under MagiC...

>BTW: I sure wish the manual that came with MagiC 5 wasn't the MagiC 4 manual!
>There seem to be a lot of discrepancies between the MagiC 4 manual and the
>actual workings of MagiC 5 - and I don't know where to find DOCs for those
>different MagiC 5 features. No READ_ME files (other than one about long file
>names) came on the MagiC 5 master disks. Anything available on the web?

The manual has always been one of the weakest parts of MagiC :-(

Hi Paul,

I recall you're using MagiC... even simpler using that:

Add some lines like (follow mine from MAGIC.INF):

```
; #_TXT 0 0 1
; #_TXT 9 7 257
#_TXT 10 5 100
; #_TXT 10 5 60
```

Note: the lines starting with ; are commented out, the one starting with #
is the current used one. The first digits following TXT are the point size
for normal font, then the point size for small font, next the ID number.

In fact you can use any GEM font, as long as it's not proportional (you can
use proportional fonts but the menu's look like shit). With MagiC 6 even
prop fonts can be used, though.

Well, nr. 1 is the bloody old, fat, ugly, outdated System font (haven't seen
that one on my system in years), nr. 60 is the Stalker PC-ANSI font, nr. 100
is the Rufus T-mail ANSI font and nr. 257 is one of the AES fonts that came
with early versions of AESFONT.PRG. Excellent replacement for the VDI, since
it's smaller and makes your boxes etc. smaller. Since I work 832x624 TC it's
a bit too small to read comfortable, so I changed to the Rufus font in my
VDI. If you can't locate those fonts, I can e-mail them to you.
Don't have to tell you those fonts should sit in Gemsys and must be in
Assign.sys too... :-)
If others know of *decent* other fonts, I'd like to hear it... but wait,
don't come up with Ocanom, Big Blue, My Blue and all that other crap... IMO
these look like shit too! Gawd, I've got this bitmap version of Arial (sic!)

and it doesn't look right... then again, what d'ya expect from a MS thing?

Hello again,

I had a phone call from a friend today and, when I asked why he had not answered my last mail, he replied 'What mail ?'.

Judging by comments, this is not too un-common a problem among subscribers on this NG alone - anyone willing to hazard a guess at the total of items that fail to arrive over the whole Net ?

And where do they end up ?

BTW, if there is any of the readers who may be cursing me for not replying to them recently, it is probably because I did not hear from you either ;-) So please mail me again.

Jim.

4163. HD Driver and DOS + TOS Partitions

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: jimsmith@zetnet.co.uk
Message-ID: <6qfp86$m3i$1@roch.zetnet.co.uk>
Source record: 95734

Hi Everyone,

I got my copy of HD Driver v7.52 today and immediately re-partitioned my one and only SyJet cart to TOS + DOS - the idea being that I could then fill it up with lots of pix, mods, MP2 files (all originals by Toodeloo/DHS I must stress) and other odds and ends enough to fill a CD. We have tickets for the Tattoo later in the month, so I intended taking my cart to a PC friend in Edinburgh with a CD writer who can drop this lot off while I was there.

If only it was that simple ....

Question: How do I write anything to my SyJet when I cannot access it from the desktop or via Kobold under single TOS ?

According to the 'Help' in HD Driver, DOS + TOS must be a single partition.
I have done this (it shows 2.9 megs free in the partition screen).
Again, according to the 'Help', TOS 4.xxx can access 2 gig partitions (it does say 'not supported').

If I put BigDos first in my Auto folder (after X-Boot), some other progs do not all run (eg NVDI and Nemesis, to name just two).

I have tried installing BigDos with nothing else active in the Auto folder except X-Boot and I cannot get to the partition I have created.
I do get some messages about start sectors on other partitons which I am wary about letting the system write because I am not sure what will happen to my other hard drives ....

My major problem, of course, is that the manual supplied with the software is in German and it does not appear to be an up to date one at that (eg the screenshots of the compatibility screen do not even show the DOS + TOS option).

Partial Solution:-
I have now formatted the cart to just under 1 gig as a single partition and can access it from the desktop to write to - it does leave a lot of spare room on the cart though ..... and am hoping my friend can access it with his PC.
This is not a very satisfactory way of solving the problem so, if anyone has any better ideas, please tell me !!

TIA

Jim.

>both in analog out and fdi out. All midi functions are fine etc.
>any thoughts?

Hi Curt,
I would first of all rather give it a try with HDDriver since I believe it's faster than ICD.
Another thing to try is to defragment the drive.
Oh! I came to think of a bug in CAF.
Before each recording, change audio track to another than the one you're going to use and then back again. Sometimes, CAF uses an old recording or just digital noise (and not what you just tried to record) if you don't do this... If your problems come because of this bug, they'll disappear if you do like this.
By the way - have you tried the system with another harddisk? Check out my homepage for some that should work (according to the persons who have sent me the info - only some of them have been tested by myself).
If nothing helps - contact me and I'll try to think of something else.

Best regards,
Claes

The SVGA monitor you have probably cannot handle the ST Low compatable
video modes. Many Atari games need a 50hz refresh rate. The same
thing happens with many games when you run them on American TV's. The
NEC is a multisync monitor and should work. I have a NEC Multisync 2a
connected to my F030 and it works great. Are you ruinning the games
from floppy, or the hard drive.

4172. Re: WANTED: UIS_III.DAT file for v3.32

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: cstanley@zetnet.co.uk
Message-ID: <6qg39hnri5@roch.zetnet.co.uk>
Source record: 95743

On 5 Aug 1998 19:49:59 G, Steve Stupple wrote:
>I am after the following file that comes with the 'universal file selector
>v3.32': UIS_III.DAT. Mine has gone bad.

Looking at my original UISIII disk I find the readme says:

Quote:
Before you can begin to use UIS III, you will need to install it
with your name and serial number. To do this, simply insert your
UIS III master disk into drive A. Double click on the drive A icon
to show a directory of this disk. You will see program named
INST_UIS.PRG. Double click on this program. When it is done
loading, you will see a dialog box with two lines for entry. The
first line is for your name. After you have entered your name in
the space provided, press the down arrow key and enter the serial
number that is printed on the UIS III disk label. When the serial
number is entered, you may click on the Install button at the
bottom of the dialog box. Doing so will write your name and serial
number to the UIS_III.DAT file and convert it into a .PRG file.
This file may then be copied to your AUTO folder.
EndQuote.

So a UIS_III.DAT file does not exist on the original disk but is
composed when you install it and is changed to a PRG file.

I suppose this is no help to you. Sorry!

Charles.

I've already downloaded APPLINE - but haven't set it up yet.

And this LOGBUCH sounds really cool. I'll have to check that out as well.

And I've heard others mention AV_SERVER - although I haven't gotten that yet,
and I'm not 100% sure of what all it does.

And what's "StiC"?

Anyway, I'm assuming these are on you web site - which I'll be checking out
soon. If not, where can I find them?

Cool, thanks for the suggestions. Since I still need to boot up in TOS mode occasionally, I'd like to modify NVDI / ASSIGN.SYS too. But I'll try your suggestions with MagiC.

BTW: How do you find out these "numbers" of the fonts? If I want to use different ones?

4176. Swap & Sale Columbus OH Atari Comp. Enthusiasts Cols

Newsgroup: comp.sys.atari.st
Date: 1998-08-07 00:00:00 UTC
From: rwarenz@freenet.columbus.oh.us
Message-ID: <6qgdm9$ova@login.freenet.columbus.oh.us>
Source record: 95797

Greetings. The Atari Computer Enthusiasts of Columbus wish to announce they will be holding their third (and continuing) ANNUAL SWAP AND SALE on September 26, 1998 from 10:00 a.m. to 5:00 p.m. Eastern Daylight Time. The event will be at the Oakland Park Community Center, 980 Lenore St., Columbus, Ohio. Please note that this Community Center is slightly off-street, on the north side of Lenore.

If you cannot decode the attached .BMP map, here are the directions in text: (other formats may be possible if needed. Contact R. Wayne Arenz below).

Columbus is surrounded by a circular beltway, InterState 270. This circle is divided into quadrants by I-70 running east-west and I-71 running north-south. Lenore St. is slightly off I-71 North, in the North East quadrant of the City.

If entering the City on I-70, go under the I-270 belt and head downtown. In the center of town look for the branch to the left onto I-71 N (Cleveland). Take this branch. Approximately 2-3 miles from downtown you will encounter the exit for East North Broadway. Exit here and proceed east (right) "one block" to Maize Rd. [If you miss the exit, get off at Cooke Rd. - see below]. Turn left (north). In order you will pass Oakland Park, Urana Ave., and then you will come to Lenore. Turn right onto Lenore. The Community Center is very near the corner, slightly off-street, and on your left (north). WATCH CAREFULLY!

If you are coming from I-71 south, proceed into downtown where in order to continue to follow I-71 you will "exit" and make a slight jog east on I-70. After approximately 1 mile on I-70, I-71 N will branch off to the left, as above.

If you are coming from I-71 north, proceed toward downtown. In order you will see exits for Route 161, Morse Rd./Sinclair Rd., and then Cooke Rd. If you pass Cooke, the next exit is East North Broadway and you will need to utilize the directions above. However, if you get off at Cooke, go left, east (back under I 71 N). Cooke makes a sharp, but short jog. If you follow the jog left and then continue to go straight, you will re-enter I 71 N going north!!! Follow the jog left and THEN GO RIGHT. After a short drive on Cooke Rd. through a pleasant neighborhood of extremely large yards, you will come to Maize Rd. Go right (south). In order you will see Norris, Hidden Acres, Blenheim, Northridge Rd., Acton Rd., Zebulon Ave., and finally Lenore. At Lenore, turn left, and follow the directions above.

Be warned! There is currently construction on the north I-270 belt that intermittently blocks people from making turns south onto I-71 ... the

Ohio Department of Transportation does provide at least ONE way to eventually get onto I-71 N going south, but it may involve some driving around!!!

The Swap Meet is open to all Atari vendors, flea-marketeers, buyers and other interested parties of all Atari platforms. Even some "other stuff" will be tolerated as we understand "full closets", but this is intended as a primarily Atari event. Vendors and flea-marketeers should donate $5 per table that they wish to occupy; each $5 table donation includes the admission donation for one person. The tables are of the standard 5 or 6 ft. long, fold up variety. Electrical power will be available. Other folks should donate $3 for admission.

We hope to see you here!! This is one of the "only" remaining events of its kind in the mid-east/west/whatever-we-are of which we know. It's not the Las Vegas convention, but it's still enthusiastic!!

Further info: rwarenz@infinet.com chwbrown@ee.net Charles Brown, ACEC Pres. (614) 447-9789.

PLEASE POST THIS AROUND. I've been trying desperately to get it into Comp.sys.atari.8bit & having no luck!!! Thank you Bill Gates and Outlook.

Does the latest version allow you to dither a 256 color picture using
the entire Falcon palette without disturbing the first 16 colors?
That would be very useful for creating background pics. I've
suggested that to Jeremy in the past and he seemed like it would be
something he'd do in the future.

Hmmmm... on my TT in 256-color mode, Imagecopy handles palette remapping like this just fine -- the first 16 colors remain undisturbed. How are you doing your conversions, Terry?

In the 'Colour mapping' dialog I set 'palette' to 'screen', 'dithering' to 'random', and have 'Remap palette' ticked. I simply view an image, Imagecopy does the remapping based on the system palette, and then I save the image. Mind you I'm not running a Falcon but a system palette is a system palette. And the palettes are exactly the same, as proven by GrafTool's palette display and doing a text dump of the RGB values with transgif.ttp; and of course no color-swapping on the desktop.

If it starts with 'BEGIN' it is uuencoded; use uudecode (UUD, NEWSie
builtin) to decode it.

If it looks like 'Content...' then it is MIME base64; use MUNPAK or
ESSCODE to decode it.

NEWSie recognizes the difference, and handles the selection
automatically (just an advertisement :)

>Ed.

Hi Ed,

I have the 2-in/ 8-out FAD from Line Audio, and it works fine for me. Does what it's supposed to do. Only problem so far - sometimes it shuts off, and I need to move the little switch on the plug the goes into the Falcon's DSP port, but that's not too much of a problem. This immediately fixes the problem without the need to reboot anything. (The switch allows you to select input from the FAD itself or a digital source via your FDI.) This little "problem" is referred to in the instructions. Maybe this has been remedied by now??? I'm using Logic Audio and Audio Tracker.

Good Luck,

Clayton Murray

I'm hoping some enterprising individual will be
selling "Linux on a floppy", i.e., the bootable
kernel system needed to install a complete
Linux distribution onto the hard drive.

Spend a few hours cooking up some easy-to-follow
installation notes showing how the process works
using the recently updated Linux 2.x CD, and I'd
be glad to pay $4.95 for a package that costs
maybe $1.25 to produce.

Anybody?

4194. IDE Quantum drive problem with AHDI and HDDRIVER - help!

Newsgroup: comp.sys.atari.st
Date: 1998-08-08 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <8GH1C4V@tos.pl.net>
Source record: 95810
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have been needing to connect some IDE drives for members of our Atari user group, and I seem to be having even more problems.

This time the difficulties relate to a Quantum "Fireball" 5.1GB IDE hard disc drive. The drive works fine on a PC, but when connected to the Atari machine it just refuses to operate correctly, although other IDE drives work fine on the same machine.

I have tried to access the drive using both AHDI/HDX and HDDRIVER/HDDRUTIL, and following are the results:

With AHDI: I will run HDX, and try to partition the drive, but only to receive the message that the drive was formatted with "a previous version of HDX", and I am advised that the drive should be re-formatted. So I tried to format the drive with HDX, but HDX would crash with a bus error after about 10 seconds. What is going on here, is this a HDX bug, something I'm doing wrong, or what? Also what is that about the drive being formatted with a previous version of HDX?

With HDDRIVER version 6: When I choose to partition the drive using HDDRUTIL, the Partition Media dialog appears, and all seems ok except that the "bytes per sector" field reads 21298, which seems a distinctly unusual size, and that the capacity is listed as 2793.2MB (it's really a 5GB drive) but what's more: the "free" megabytes, listed just above the Help and OK buttons, is 203497.2! (I sure wish it was really that easy to turn a 5 GB drive into a 200 GB model!!) I tried partitioning it anyway, and everything seems ok, when HDDRIVER runs it lists "partitions C-x" where x is correct for the amount of partitions I used. However, the partitions are not accessible from the desktop - when you double click on a drive icon, nothing happens. What is the problem here, and can I fix it at all?

With HDDRIVER version 7, demo: I still can't access the partitions when the drive was partitioned with HDDRIVER 6, and I can't try partitioning it with version 7 since the demo version doesn't support that.

To make matters worse, even if the latest HDDRIVER version would correct the problem (which I don't know if it does), the person who bought this drive has just spent lots of money on his machine and really doesn't want to have to pay yet again for HDDRIVER, at least for now. He's already had lots of hard disc problems and he just wants the darned thing to work, as simple as that. He has AHDI 6.06 and would like to use the drive with that, even if the full capacity was not available perhaps, as long as the drive is accessible, in ANY form, it would be better than what he's got now.

Is there ANYTHING I can do to format/partition/do whatever is necessary to this drive so that it can be accessed with AHDI? Or else will HDDRIVER version 7 solve the problem? Or is there another driver that will work - what about CBHD - does it support IDE? I have suffered enough problems now with misleading information and unforseen problems, that I really don't know what will be enough to convince me that it will work, and I would hate to recommend to the person that he should buy HDDRIVER, if I have not seen it working with my own eyes. However I guess that's not possible. (I don't want to upgrade HDDRIVER at the moment, since version 6 is working fine for me, and if I always updated to the latest version it would get rather expensive, since the updates appear so often.)

Perhaps I could edit the disc with a sector editor and manually enter the correct partition info, if this is in fact where the problem lies. Or if it is simply that bogus sector-size mixing things up, maybe I could simplt correct that by hand? I am unfamiliar with the technical side of IDE drives so it's hard for me to judge the cause of these problems. If so, where can I find a disc editor that will operate on IDE drives (I have DADE but it doesn't seem to like the drive)? Or is there some free partitioning program, even if it's not a complete hard disc driver, that might help me?

I am absolutely at a loss as to what to do. Any help would be very much appreciated. I would appreciate it if you could also send your reply by email, as it may reach me much sooner and more reliably that way than via the usenet, and I need to get this sorted out as soon as possible!

Thank you for any assistance!

I know this is a problem, and will hopefully fix it within the week.
As a work around make sure that POPwatch's path (or NW's) is defined in a
PATH= environment variable. That should allow them to find their rsc files
etc.

Or pop the dialer into the MODULES folder, run the dialer as an ACC, or (an extension of your idea above) put a link to the dialer into your default HTML page that CAB first loads?

The port on the Atari lasers isn't SCSI I'm afraid, but appears to be some kind of video, presumably for direct scanning onto the drum.

>on that I always have on that you may not.

I've had some success since, I surfed to Hallvard's site for example, but
others still don't produce any display (including yours as I said).

I can't think that there's anything that should be tweaked preferences-wise,
however it's my habit to have my email address scrambled in the prefs.inf
file which /might/ have a bearing. It's too early to say if this is the
case.

May I make a suggestion for development of Newsie?

The built-in help files are much better at giving help in context, would it
not be a better plan to build this kind of help into the ST-Guide version,
which would make it easier for you to keep the help system up to date and
would supplement the BubbleGem help system nicely.

> it would be nice to have the extra visability. Any Suggs?

Tim,

The problem is the VGA signal from the TT. The only way to correct it
is:

1) Have a TV or monitor repair station remove the monitor case and adjust
the internal pots that control beam width/hight

2) Do the above youself - beware, touching the wrong compontents even
with the monitor "off" can produce interesting results.

3) Find a good used 15" monitor with digital controls. It will work on
the TT but not the Mega, however.

> someone give me some info? And do I need drivers?

If that PS/2 mono monitor is a VGA monochrome, as I suspect, you could build a cable to use it as for hi-res mode, but with the cost of used SM124 (and for color SC1224) monitors, it probably would not be worth the bother.

You should be able to find the ST video (and most other) pinouts on the menu at:
http://lwp.ualg.pt/docs/hwb/menu_Connector.html

> Also if anyone has a suggestion for a use for the PC (eg can it be connected
> via serial cables and used for extra hard disk space or something?) that
> would be welcome.

There is a program called "Ghostlink" that can hook up the ST to a PC via serial. PARCP is the program to get for parallel connections (and should be considerably faster, considering the unmodified ST serial port is limited to 19.2Kbps). I believe GhostLink is freeware, and PARCP shareware, although I am certain someone will correct me if I am wrong about that. <grin>

> One more question - if I download shareware from the internet can the Atari
> read my PC disks, and if not, how can I get them from my PC to the Atari?

Unless he has one of the first STfm's that has a single-sided drive, instead of double-sided, all you need to do is make certain you format the disk to 720K, not 1.44meg, and avoid Win95 long filenames. Use of actual DSDD disks is recommended, although you can probably get by with formatting a HD disk to 720K if it is to be used only for transferring files from the PC to ST.

> But when I try to run the games I have, such as Civilization,
> Llamazap, Test Drive, etc., the screen flips all over and
> I can't see anything well enough to play.

It sounds as if the games are kicking the display down into 15.75Khz mode (standard ST lo-res, with line doubling disabled). Unless someone can advise of software that can "lock" your Falcon into line-doubled modes for use with these games, your only alternative will be to use a 15.75Khz-capable display (such as a TV, or another monitor) when playing games.

> I tried switching to low res mode before running the games, as I
> would do on my 520ST, but that did not help.

I assume that even in lo-res, everything was stable before you started the game? If so, line doubling was properly enabled, but the game is definitely bypassing the OS and setting its own screen mode.

Hi again,

well if you use Thing as your desktop, it's fontselector will show you the ID as well, plus how the font looks like. Kinda handy from the desktop. And programs that understand the proper handles, can take another font straight from the Thing fontselector too :-)

CU NeXT msg,

Hi there, well if you knew what it did why didnt you just tell everyone then?
Then this thread would no longer have to go on. Are you the "protector of the
people " or something?

I did not have smileys because I was being serious. I should have
quoted the original message. What I am a big angry about it you-
I have read this group for a long long time, and it always seems that
at the very fist chance you get you try to contradict everyone, prove
someone wrong, or start a useless thread. Ive talked to you on
IRC(MenU on #atari) and youve even helped me with my web page! I know
you're not a bad guy, But it seems you act a bit different in this
newsgroup (or you act different on IRC..)]

>Please feel free to try and moan at another one of my posts any time
>you like... but maybe a bit more thought and effort next time eh ?

See this is what Im talking about. You try to make these threads last
and go on forever!!! It doesnt matter to me, if you want to discuss
this further please email me at collins@bulli.com.. if not, then
just forget about this.. I hate dumb useless threads that seem to be
appearing more and more here. (esp. that sinclap one).

OK, Now for all, who are STILL wondering what POPGEM is,it is a
small email client in gem. I guess the easiest way for you to understand

how it works, what makes it different, is to merge some of the docs, but
believe me- you really have to see it in action to really appriciate it.

POPGEM follows the POP protocol as defined in the RFC 1225.
Demon.UK might have problem as I heard they don't follow it.
I did try with demon.nl and worked perfectly.

What you need is: STIK/STING or GLUESTIK.
At least 260 Kb of free RAM for POPGEM.
A multitasking OS. (MiNT/Naes best)
An AVSERVER setup and running. (THING for example)
With files *.TXT and *.HTM assigned. (1stguide and CAB for example)

In the stik configuration file, you should have 3 variables set.

POP_HOST=pop3.primenet.com (for example)
POP_USERNAME=joey (for example)
POP_PASSWORD=my_passwd3 (for example)

In sting, it is in default.cfg that you will place those
POPGEM is a shareware. Should work in MagiC but can't guarante it.
The RSC file is handled by the AES only. It has been made to look good in
Multitos/Naes 16 colors. If it looks crappy in Magic.
well not my fault really.

Some extra popups are used when the AES provides them (form_popup()
Magic/naes compatible only.)
For others, doubleclick on VIEW to get the HTML export. And LEFT
mouse click for TXT export.

RIGHT mouse click over an object will call BubbleGEM and display the
appropriate help. BubbleGEM needs to be installed and laoded for it to
work of course.
*****
POPGEM 1.2 has few extra. counter for email marked as deleted. Email
marked as DELETED will be ERASED from your POP server when you Disconnect.
*****
There is also an extra icon (a PIN icon), that acts like a pin :)
YOu can actually drag and drop this PIN wherever you want on your desktop,
other applications, trashcan etc :)

The Main window of POPGEM doesn't need to be topped to work in background.
(i.e you can click, select directly, even if untoped).

The file uudecode.ttp present in your mailbox folder only has been
tested under MiNT, I don't know if it will work in singletos/magic.
To use it, Just drag and drop the email that is uuencoded on to
uudecode.ttp and that's it.
Same for munpack.ttp. Drag and Drop the MIME encoded email on it.
The file icons.rsc contains like 5 color icons, so you can assign
popgem.prg in your desktop.

The little blue triangle in the big black box is to remove the gadgets of the window.

If you click on the black-info-box, it will reset the default message in it. Just cleans the box out.

Shortcut added the DELETE key, will Mark/unMark as deleted.

POPGEM can run as an ACC.

POPGEM 1.2 supports sounds event.
POPGEM will rely on the AVSERVER to play *.wav files. So you need to have *.wav assigned to a player. Most preferably, a player that will NOT lock the AES!
GEMjing, backgrplay recommended. Actually ANY player that supports *.wav files, AV-protokol, and that will NOT lock the AES. (example don't choose PHplayer so far. It does lock here, I hope this will change).

What you need only, a folder "sounds" with specific sounds filename.wav

If the folder sounds has not been found, POPGEM will bypass all sound commands.

If a sample is missing, Example: fetch.wav well, all the sounds found will play except when fetching email.
Here is the list of sample supported by POPGEM:

connect.wav (when first clicked on connect server)
connect2.wav (If your mailbox is not empty this sound will play)
markdele.wav (when email mark as deleted)
unmark.wav (when you made a mistake and you want the mail UNMARKED)
pin.wav (the drag and drop of PIN icon)
click.wav (the click on right or left arrows)
credit.wav (the INFO credit button)
fetch.wav (Fetch headers icons)
filesel.wav (when saving, the fileselector opens)

Just file-rename the sounds you don't want, or directly the folder sounds\ if you don't want any sound.

POPGEM is a shareware, I think something like 8 USD, what do you think? for 8 bucks, is it worth it? Email me comments, bug-reports.

**** SHAREWARE ****

>Would you oblige by giving an example Batch file, please, to dismiss
>the dialer window and start eg NEWSie or CAB etc?

Sure! Here's my LOGIN.BAT file:

D:\INTERNET\CABDEMO\CAB.APP

Just replace this with whatever file path you want. Keep in mind, however, that I use Geneva and Neodesk, so I'm not sure what it'll do with Magic or other setups. On this system, it puts the dialer into "sleep" mode, making it take up no processor time, then runs CAB. I've tried it with other programs as well, and it seems to work fine. If someone could try it on Magic, MultiTOS, and others, please let us know if it still works this way.

Croft Soft Software
Press Release - 8 August 1998
----------------------------

1998 Atari Times Awards

Following on from last years popular Atari Times Awards, I'm pleased to
announce the 1998 Atari Times Awards!

I'm currently putting together a list of categories, so far this includes:

Best Programmer
Best Commercial Release
Best Shareware Release
Best PD/Freeware Release
Best Game
Best Hardware Add-on
Best Company
Best Non-Profit Organisation
Best Disk Magazine
Best Paper Magazine
Best Web Page
Best Internet Service Provider
Special award for services to the Atari community

If you can think of any more then please let us know...

Voting has NOT YET STARTED, once the list of categories is finalised I will
make an announcement. Please do not vote on any of the above categories
until this announcement has been made!

Nothing. Because all of the Ataris would have gone/broken down beyond
repair by then.

The Time package is by Ronald Anderson, dlanor@oden.se

> If Peter sees this perhaps he will tell us what restrictions there are
> on programs run from the LOGIN script.

Basically, there are none, except what has been mentioned here, that the
programs will be executed successively.

The main problem is with the programs to be started. Many do not call
shell_find() to locate auxiliary files. This leads to the situation that
they will not find those files (possibly even the *.RSC file) if the
current working directory is not the programs's path when it's started.
I can try to emulate that, though. Put it on the To-Do list.

It was a quickï¿½n dirty solution at the time, and simply stayed the way it was.
I do not really want to make this all that configurable, do you think it needs
to be ? I admit placing the LOGIN.BAT simply in the Dialer path (DIAL.INF)
where the more intuitive way. Maybe I should change it that way.

>
> 1. It connects fine and seems to load the directory ok.
> 2. When the directory is displayed, there are no filenames and the
> file sizes are all 0.

A problem with ftp is that there is no standard for the way directories are
displayed. This is a difficulty for the clients for they need to parse the
listing sent by the server. It could be that all the problem is that the server
lists the files in some unusual way NEWSie does know about. Ask your ISP what
OS the ftp server runs, and which server software. You can try other ftp clients,
possibily they are a bit smarter here.

The log of NEWSie shows one peculiarity that should be told John Rojewski :

> [... login stuff ...]
> -> CWD www
> 250 CWD command successful.
> -> TYPE A
> 200 Type set to A.
> -> PORT 209,30,43,70,4,20
> 200 PORT command successful.
> -> LIST
> 150 Opening ASCII mode data connection for /bin/ls.
> Transfer Rate = 2618 cps
> -> PWD
> 257 "/www" is current directory.
> Error - dir: /www, current: www

After login, NEWSie issued a "cd www". The server reports current directory
being "/www" which is correct, so NEWSie definitely should not report the
error displayed in the last line.

On Sat 08-08-98 13:53, William Platt scribbled:

>Is there any horizontal overscan. Anyway is there anyway to stop the
>flicker. This is a totally useless mode with all the flickering.

Overscan is for both horizontal and vertical. You can't have just
one or the other. You can have 768x480 with or 640x400 without, but
you can't get, for instance, 640x480 or 768x400.

You can get rid of the flicker only by disabling line doubling, but
that will reduce your maximum res to 768x240. Or, of course, by
getting a VGA monitor. Some RGB monitors display less flicker than
others, though. I seem to recall that you're using a TV for a
monitor, which is probably even worse than an RGB monitor.

I've been using line doubling modes for the couple years or so I've
been using a Falcon and I don't hardly notice it anymore, unless for
some reason I haven't been able to use my Falcon for awhile (for
example, when the power supply went out). You can reduce the flicker
somewhat by setting your colors and/or background screens to low
contrast. The higher the contrast, the worse the flickering.

>system palette. And the palettes are exactly the same, as proven by
>GrafTool's palette display and doing a text dump of the RGB values with
>transgif.ttp; and of course no color-swapping on the desktop.

What you're suggesting is dithering a pic using your EXACT 256 color
desktop palette, ignoring the other 261,888 colors available on the
Falcon. In most cases, that creates a mediocre pic at best, and is
not what I'm asking for.

What I want is for it to use my first 16 desktop colors only and then
draw on the entire rest of my 262,144 color palette for the other 240
colors. That gives me the best possible 256 color pic without
messing with my desktop colors.

This is somewhat possible using Speed of Light combined with
Imagecopy, but it's quite a PITA, and doesn't always work well.

Yep, I've ran into that problem with UUD more times than I care to
remember.

Of course, both MUNPACK and ESSCODE will also handle uuencoded files,
though only UUD handles long filenames, AFAIK.

Well, Okami also handles long filenames. :^)

I'm trying to set up a killfile, below is what I have so far, I
don't understand all of this.

```
#NEWSie
# This file should be placed in the "work" path.
# format is:
# find <tab> text <tab> action <tab> value <tab> comment
# find can be:
# subject - any text within Subject, uses pattern matching
# author - any part of originating Author Full name
# email - any part of orignating email address (user@domain)
#
# action can be:
# status - change status in mailbox
# 'D' for immediate delete, (you will never see it!)
# 'P' for Purge, you will see it marked with a 'D'
#
#Examples:
subject $ status P purge all messages with '$' in the subject
#
#end
find petejan@c-zone.net D
```

This is what I have so far, and does this work on Newsgroups too?

```

From: dontknow@dontcare.com
Message-ID: <35cce612.10234093@news.supernews.com>
Source record: 95599

Well, I've been doing some reading, and it looks like there's still quite a bit of activity in this newsgroup. This is a welcome surprise.

I am an ST owner (1040), unit currently sitting packed away in a box in a friend's basement in North Carolina (I'm in Seattle). About 10 years ago we bought a copy of Oids together and played the hell out of it.

I recently revved up my Wintel box and downloaded some emu stuff and was hoping to get a version of Oids for the PC. Of course, the original, *real* software would be best, but the copy we bought is moldy and junk at this point.

So what's the situation with getting a copy of this game? It looks like flamethrowers are still taken to anyone who mentions freely "pirating" ST software, even stuff like this that, to the best of my knowledge and after searching, I can't find a source for. Hell, even if I found a copy, I have no idea how to get it into the PC...

So, here I am. I have the original disk (albeit 3400 miles away), which I rightfully own. The ST itself is likely dead. I just want to play the game. Can anyone clue me in on where to look?

Of course, a really, truly authentic port to the Windows box would also be good, but I miss real thing.

Anyhow, I'll read any replies, and email is welcome at my true address, which is "nocere" with a host of jps.net.

Hi Paul,

speaking about running from TOS: if you use VDIFONT.PRG in your autofolder,
you can replace the VDI font (or is it the AES font? Well, actually I think
it's the AES font) by other types, not necessarily a 10 point one... Told it
before, but before using MagiC I had this 9 point AES font in my system. At
least in 640x400/480 rez this looked far better than the stupid systemfont
(AND all the look-alike replacements).
Not so long ago I emailed the stuff to a few other people. Never heard
whether or not they got it working, but it worked fine for me for years.

>and I'm not 100% sure of what all it does.

Paul,

putting the AV_SERVER line in means several apps can use different handles
which in turn makes the whole system more comfortable. I mentioned Thing's
fontselector already. AV-Servers can be Thing, Jinnee, I think Magxdesk (?)
and even other programs.
>
>And what's "StiC"?

STiC is more or less a gimmick: you know about the little MagiC logo in your
right corner? You can do that with lotsa apps, provided such a logo/icon is
available. The configuration of STiC is something, and the biggest trouble
is: you need a fontsize set in the AES of 8x16. If you use a 7x14 AES font
those icons won't be displayed. Anyway, the idea of STiC is only (IMHO) to
display a color icon of the running app under MagiC.
>

>
>Hmmm... I've heard of this. Is it commercial or shareware/freeware?

SPIN! is not commercial. I use parts of it, together with Metados stuff to
run my CD-ROM. Had these troubles with the (old) Extendos/MagiC combo, then
switched to Metados and finally used some stuff from Spin to get it all 100%.
>
>>The manual has always been one of the weakest parts of MagiC :-(
>
>Tell me about it!!!!

Call that a Manual? I always thought those Jerries were "Grundlich,
Punktlich usw." :-) Got some files from the Mausnet, but then you need to
be a programmer to understand what they're talking about.
Sure hope MagiC 6 comes with a DECENT manual again...

Source record: 95603
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of POPwatch (2.72) is now available at my web site.

Also on that site is an early beta of a combined POP3 and SMTP server for
Atari's running STinG or STiK.

Just for those who don't know what POPwatch is, it's:

A GEM online mail collection and sending tool that can be used to send &
receive email in NOS (Okami, Oasis1 etc), Oasis2, and NEWSie format.
It allows you to selectively download email, features a KILL and REJECT
facility, and loads of other features too numerous to mention ;-)

For my web site, follow my sig..

You can try the Computer Dungeon, or B&C Computers. I don't have
their addresses handy. If you already own the game, and use a pirated
version; then it's not piracy. The games are not being supported and
if you have no way of getting a copy from the manufacturer then do
whatever it takes. Most old ST games are sold for $3-5 anyway so if
you can find them buy them, otherwise look at some of the pages on the
Fatal Designs server. The is also an excellent emulator called
Pacifist.

before the flames hit. I do not condone piracy. I don't believe in
stealing. And I would be upset if I saw any of the modern ST software
being hacked. On the other hand, 10 year old games that can't be
bought anywhere, and are not supported anymore; we should all be
thankful that they are still floating around. This is helping to keep
the platform alive via emulation.

4255. mega testers wanted

Newsgroup: comp.sys.atari.st
Date: 1998-08-09 00:00:00 UTC
From: chris swinson <chris.swinson@zetnet.co.uk>
Message-ID: <6qkebj$h1g$1@roch.zetnet.co.uk>
Source record: 95614

Hi all,

Due to TOS clashes on issues of Mega disczine, I would like a few of you to test a few programs on your machines to see if it will run ok.

Currently we have a ST with TOS 1.02, 1.04, and a STe with 1.06, A Falcon with TOS
4.04. If you have a machine with any other versions of TOS, could you help me and test a test program to see if the sound/mouse works ok.

The program sould also select a compatiable sound play routine so, all ST's will have to have chip music, STe's will have 21K playback for MOD's. Falcons will have 50K playback. But I'm not sure how it will effect other machines until I get some help, So come on help us out !

Anyone who tests things for Mega will get credited in the next issue.

I used to use Edhak with my STe, but for some reason it doesn't like
my new (s/h) Falcon at all - the mouse cursor keeps disappearing, which
although I'm not sure IS Edhak's fault, it doesn't happen with Everest.

Cheers!

Yes, its possible, although I only use it for Net Access!! What you need is a
TCP/IP stack called StiNG (short for Stik Next Generation). You should
be able to get hold of this almost anywhere, and best of all its
freeware/shareware!!

Cheers!

There was an overscan hardware conversion available for STs, but not sure whether it worked with TTs as well.
I bought a 15" CTX monitor with digital adjustments for my Falcon, and on this you can expand the scan to full screen with no problems. This is true with many modern types too. Several have a number of stored adjustments so you can quickly revert back if you need to.

Sorry can't help you but on my Hades I notice no differents between
STing/MiNT and MiNT/mintnet.
Dowloading files usualy goes around 2500-3200 with both systems.

I assume this the problem that some of us have if we use the latest
STinG modules. Try and find an older TCP.STX module.

> How did you manage to do that at all? I've always been told that STing
> will not work with Mint/MultiTos. C'mon, tell us your secret! ;-)

STinG work fine on my MiNT/N.AES/Thing setup.

Rich.

Hi Kees,

fetch the old TCP.STX (from your previous version of Sting) and put it back
into the Module folder. It's newer version works OK with most of us, but
some of us had the same problems. Peter was working on finding the trouble,
but after trying out a few test versions, I've heard nothing from him.

I've a similar monitor, VisionMaster15, but it has adjusting buttons
below the screen. The best it shows is half-inch either side, but that
sort of margin comes with all(?) the ST family of computers.

There was some highly technical discussion, in a related ng, about
programming it out or switching the pixels off, but I believe no
useful conclusion was drawn. Any programmers who know otherwise,
please -- ??

Also, when Mario has his RAM upgrade finished you will easily be able to
have up to 14 megs of RAM in your ST.

I have a Mega STe as well. It drives an Atari SLM804 laser printer. But my recently-acquired TT030/4/4/540 bombs at boot-up if I connect the laser to its DMA port. I know that this should really be posted to the ...tech newsgroup, but there you are with both machines. Your experience?

I just got Maggie 26 (awesome, as usual!) and it mentions what a new
demo called "Timeout", and how stunning it is. Well, I went ftp'ing
and haven't been able t find it. Anyone know where we can get it from?

Thanks in advance! ;-)

>
> Anybody care to guess how big the community is nowadays?

I'd say there are significantly more. It is very hard to guess accurately,
since the large majority is seldom on the net, or seldom writes anything
(only reading). I feel the true number might be larger by a factor of ten
(or even more), but as I said it's hard to say.

Your number could be right though if by the term "enthusiast" you refer
to people who go through the hassle of doing hardware upgrades trying to
partly keep up with nowadays developments, and really work with their
machines (A little browsing the web is not work IMHO).

What does the corresponding RFC say about this ? I'd suggest if the RFC
requires the Received: line then it's ok to rely on it's presence.
Otherwise other solutions should be there at least for an alternative.

I too have never seen any e-mail without that line. Gary, you should be
aware that most e-mail clients do not show that line by default, so people
might have reported they won't get the line just because they haven't seen
it, which was only due to the client not showing it. I had guessed it always
there.

Possibly is has trouble recognizing the dial tone. Configure it to not wait
for the dial tone. The AT command for this should be in the modem manual.

As most modern software, HDDriver is very good, but hardly optimized for low
memory. Try a somewhat older driver that needs less memory. I have a CBHD
that only is 10k long and does not allocate much memory.

Still, for web browsing I would recommend 2 MB.

4285. POPGEM, AV Server & other problems

Newsgroup: comp.sys.atari.st
Date: 1998-08-10 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <6qnetsjfv1@excalibur.flash.net>
Source record: 95394

Hello,

I just tried Kellis' POPGEM, and from the looks of it, it's a
very elegant program. However, got a couple problems that maybe
someone could help with. First, the docs say you need an AV Server and
suggests Thing. I use Geneva and Neodesk 4, which can operate as an AV
Server, but POPGEM isn't recognizing it and says it can't find the AV
Server. Am I missing something?
Also, I set up the POP variables in STing's DEFAULT.CFG file,
and POPGEM says that they aren't there. Once again, what am I missing?

I have nearly finished a small program that can be run from LOGIN.BAT,
and will execute each program in it's own script in a parallel fashion.
It also understands VA_START and will also change the working directory
before executing each program to minimise on path problems etc.
It's nothing too fancy but should do the job.

Hopefully people will find it useful? I'll hopefully put it on my website in
the next few days.

Message-ID: <35CF5693.DB84692@removethis.recursive.prestel.co.uk>
Source record: 95402

I'm having a problem with Pacifist. The mouse works fine under the desktop, but when playing games such as Star Wars, Empire Strikes Back and Sentinel it seems that I'm getting extra input (ie in the Sentinel world select box the number 9 is automatically entered repeatedly). I've tried both my normal Logitech serial mouse and a normal M$ mouse, using both the provided drivers, and pacifist's internal driver - all to no avail. Any help would be much appreciated, as I really want to play sentinel again :)

Cheers
Dave

4294. Who'll buy Milan?

This is certainly not meant to sound detrimental to the people who have designed the Milan - but who is actually going to buy it? We know thats it the applications which sell a machine and what will the 'killer applications' be. We dont seem to have a decent up-to-date programming language to encourage those who want to write their own, and most of the DTP and MIDI stuff has been left far behind in the wake of MSDROSS.

The people at Milan should be congratulated for their belief in the TOS market, and I'd hate to see it become a one-minute wonder.

Usually you will see your address on all or none as it depends on your
own ISP! I never see it on the last line but sometimes it's there on
lines further down.

Personally I think it works OK as is. To actually make it secure as a
"multi mailbox system" You would have to go through all addresses in the
to-field and for each match with any field in the alias (e.g.) file make
a copy to the actual receipients *.TXT . If no match at all it should
end up in POSTMAST.TXT .
If both you and your wife appears in the to-field you will end up with
one copy each.

It is horrid on the TV, too bad because I mostly use the Falcon for surfing the web and the true color mode seems to decompress JPEGs faster, probably due to a lot less dithering needed. Plus it would have been nice to have a 27 inch monitor. I used low rez overscan and got a very sharp screen, however CAB's menus were just a little too big and the top of the screen got cut off. I wonder if I can resize the CAB resource file to fit low rez.

>I've been using line doubling modes for the couple years or so I've

Are you using a regular Atari color monitor. You can get 14 inch VGA monitors for as low as $59. I got a NEC multisync 2a for $79. I believe this can also handle the RGB modes. I guess the VGA monitor adapter is kinda rare.

Thanks for all your advice! I did not know about needing a monitor that could sync down to 15.75Khz. The display looked fine in low-res and med-res at the desktop, but as soon as I tried to play the games, it flipped out. I will buy a NEC 3D monitor. The person I bought the system from said he used a NEC 3D with it and everything was fine. I did not understand the difference between that monitor and other ones, like the 3V or the Samsung I have, but now I do.

Thanks again.

This may be a little crazy, you can run a plug from the audio ou to
the audio in. Then in a multitasking enviornment play the MOD and
record it through one of the many direct to disk programs available.

If you haven't noticed there arer a lot of recent programs out there.
The only thing that we don't have are alot of new games-that's what
nitendo is for.

My concern with the Milan is why an '040. Even a fast '060 is getting
outdated. The specs seem to be what Atari should have built in 1994
to followup on the Falcon. Correct me if I'm wrong, but isn't the 040
about the equal of a 486.

That symptom started here with EdHak after installing a Nova card on
this TT. Very frustrating to deal with. Qed works much, much better,
another choice.

I'm happy to say that Gary's page virtually always comes through
quickly, here. When I have slow downs they are usually universal rather
than limited to a single site.

4305. http headers & CAB 2.7

Newsgroup: comp.sys.atari.st
Date: 1998-08-10 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <6qo0oe$7l4@news2.tds.net>
Source record: 95414

I've been experimenting with the demos of CAB 2.7 and The Light of Adamas, trying to determine which one best suits my (our) needs.

Overall, I prefer CAB 2.7 (while acknowledging the areas where TLoA edges it out. However, I note two things. One is significant since Karen does so much research online, the other is more a curiosity.

1: Adamas displays my Geocities counter. CAB 2.7/
CAB OVL 1.3008b/STinG 1.15 still only display "0000" (curiosity)
2: Adamas displays the NAIL search results. NAIL is an archive retreival system at the US National Archives (http://www.nara.gov). CAB 2.7/1.3008b/STinG 1.15 retreives the pages (which is better than 1.5 & 2.01 did), however, the page is sent by a CGI program as "STANDARD.TXT" and CAB displays the source code. Adamas formats it properly as an HTML page. One thing to note on this comparison is that I tested with Adamas about four days ago, and just tested with CAB yesterday - NAIL was down for system maint. yesterday, so maybe they changed something.

Incidently, I can display the page simply by saving it with an .HTM extender & then loading it from disk... all the links work. But I have to do this with _every_ page accessed.

Anyone have any ideas how I can get CAB to recognize the header properly & disregard the .TXT extender?

Thanks,

Terry

>Server. Am I missing something?
POPGEM just look for the environment variable AVSERVER. Is AVSERVER
defined anyweher in your setup? Does aftp work well if you drag and
drop files on the trashcan or some windows directory?

> Also, I set up the POP variables in STing's DEFAULT.CFG file,
>and POPGEM says that they aren't there. Once again, what am I missing?
Well, here I just followed the STIK way of doing. It just happened
that it worked here under Gluestik.
Then I tested under Magi and sting. It all worked fine.
the only one left is geneva. So either geneva has a prob (which I
doubt) or that you didn't set them correctly.. I don't know..
singletos/mint/magic work fine under stik/sting and mintnet/gluestik.
If more people would confirm that under geneva. A fix might be worth a
try.

4309. Atari PS3000 question...

Newsgroup: comp.sys.atari.st
Date: 1998-08-10 00:00:00 UTC
From: Prince Corum <corum@sasquatch.com>
Message-ID: <6qo9l0dpa1@news.sasquatch.com>
Source record: 95418

What is it? It appears to be a monitor of some sort with a 3.5" floppy mounted beneath it. Can anyone tell me what this thing does and if it can be used with my 520ST? I have no floppy drive or monitor for my ST and have thusly let it sit. Is this PS3000 unit something I can just run cables into and get my system going?

Thanks!
Louis

I wish I had your monitor, I'm using an SC1224 in ST Med True
Color on my Falcon, one reson I've not tryed to set up the
internets stuff on it, with that monitor everything overlaps,
even in the other non true color modes. So i stick with this TT
for my internets.

Personally, I doubt that it will even work on an emulator. FTL used a very tough copy protection scheme which, as I recall from Dave Small's explanation, involved formatting the disk in a way that cannot be reproduced by a regular floppy drive.

I've encountered the exact same problem and although I've tried putting MUNPACK and UUD.TTP in the working path, I still get 'DECODE FAILED'. Also, ESSCODE, while it seems to handle UUencoded files well enough, doesn't always work on B64 in my experience. If anyone's interested though, I did manage to find a neat little program for decoding B64.

4316. HELP! Atari Portfolio LCD Problem.

Newsgroup: comp.sys.atari.st
Date: 1998-08-10 00:00:00 UTC
From: Mail <gehring@shaw.wave.ca>
Message-ID: <35CE64AD.5A4E54E1@shaw.wave.ca>
Source record: 95559
Cross-posted to: comp.sys.atari.st,comp.sys.palmtop,comp.sys.handhelds

I have recently been having problems with my Atari Portfolio. About a week ago it froze while I was using the serial port to use the modem so I fliped it upside down, and took the batteries out and put them back in. When I turned it back on, it stopped working. During further investigation I found that the LCD was the problem, it works only when it is opened 'slightly' and afterwards it doesnt work. At a certain point during opening the LCD panel the picture fades out and then disappears. I have a broken LCD panel from another one and I opened it up and found nothing that would cause the LCD to know what angle it was opened at.

Does Anyone know what could be causing this problem or how I could go abotu fixing this?

Thanks!
- Mike Gehring

STiNG works fine here under MiNT 1.15b and N_AES 1.1.6. I haven't
tried multitos in a long while, but it should work just as well.
I don't use MiNT NET, so i'm not sure about GlueSTiK, which is not
necessary unless your using the MiNT comms stuff AFAIK. The last few
CAB OVL's have worked great as well. My MiNT file is pretty basic and
the only golden rule for me is to run Drivn, SCC and STiNG after MiNT
in the autofolder.

I've tried all the FTP clients that use STiK/STiNG (AFTP, MGFTP,
CAB-FTP, etc.). They all do similar things. I find it strange that
this is the only FTP site I've ever had any problems with, and it's
correctly displayed by both my ISP's FTP software and also through my
wife's shell account at the University. It makes me suspect some
problem in the connection or in STing or in some configuration
somewhere. I'll contact my ISP and software authors as you suggest.

I'm not an expert on copyright laws, but if you own the software,
is it legal to get a copy of it if your original copy breaks? I
personally wouldn't consider it so, but once again, I don't know.
Anyone?

>knowledge and after searching, I can't find a source for. Hell, even
>if I found a copy, I have no idea how to get it into the PC...

Get NoSTalgia. It's supposed to be the best at handling games (if
anyone else knows better, please post so). You'd also need to get
software to make a .ST disk image, I think. You can find links to
NoSTalgia and other software at my Links page. Look under the System
Enhancements. Go to the UTSI: Emulators link that's there. My URL is:

http://www.flash.net/~nameerf/TOSLINKS.HTM

Good luck!

At 4Mb, you're already at the max.

It accepts 30 pin SIMMs, <120ns; with or without parity, 256Kb or 1Mb,
in pairs. That gives you either 0.5, 1, 2 or 4Mb

> I have done this (it shows 2.9 megs free in the partition screen).

But your TOS doesn't support partitions of this size. The maximum
partition size TOS allowed must never be exceeded, regardless of the
opitons you used when partitioning. This is not a restriction imposed by
HDDRIVER but by TOS.

> Again, according to the 'Help', TOS 4.xxx can access 2 gig partitions (it
> does say 'not supported').

That's why you have to make your partition smaller (< 1 GByte is
recommended as partitions larger > 1 GByte are not officially supported
by TOS because they are not compliant to the GEMDOS specification). The
rest of the medium you can't use in DOS/TOS compatible mode.
> My major problem, of course, is that the manual supplied with the software
> is in German and it does not appear to be an up to date one at that

Where did you get your HDDRIVER 7.5 from? System Solutions is the
official distributor and they provide an English manual. Users that
don't speak German shouldn't buy HDDRIVER from other distributors than
System Solutions because they exclusively provide an English manual.

> can access it from the desktop to write to - it does leave a lot of spare
> room on the cart though ..... and am hoping my friend can access it with
> his PC.
> This is not a very satisfactory way of solving the problem so, if anyone
> has any better ideas, please tell me !!

There is no other way if you use DOS/TOS compatible partitions. This is
du to restrictions in TOS (and DOS as well because standard DOS
partitions can also not be larger than 2 GByte.) In order to use the
medium with its complete capacity you have to partition it purely DOS
compatible, i. e. without TOS compatibility, and run Big-DOS or MagiC on
the Atari.

4331. Falcon audio and crashing problems

Newsgroup: comp.sys.atari.st
Date: 1998-08-10 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <OOJ1CIQ@tos.pl.net>
Source record: 95574

We have some C-LAB Falcon MK X machines here in New Zealand, and we are experiencing problems with them. We would like to find someone who would try to duplicate the problems on their Falcon, in order to test whether it is a common problem, or one that affects only our machines. The trouble is that when we describe the problem everyone just says that they have never seen it. Well if you can specifically follow the instructions below to duplicate the problem, then we will know for sure. You will help us a great deal if you can read the following thoroughly and try out some of the problems on your machine. We would like to hear of any and all problems that people have had with Falcons and Cubase Audio.

This only applies to owners of Falcons with Cubase Audio, since that is where the problems occur.

We are still suffering from problems with our Falcon MK X machines, and recently these problems have become so bad that the machines are no longer usable at all.

Initially we had problems with click in the audio, but those problems are insignificant. The real difficulties are two, and are explained below:

Firstly, the machine will crash in the Cubase Audio Audio Editor. While operating the Audio Editor, the Falcon MK X will often crash, with a number of bomb icons visible on the screen. Cubase Audio then exits, and the desktop reappears. The crashes are repeatable; it is possible to make a crash occur almost without fail by performing a specific sequence of actions, as follows: Open the Audio Editor; define a loop; snip the loop; drag the resultant loop down, onto another track; then click the mouse in the Loop Bar. At this point the crash will usually occur. If not, the crash will occur after a few more loop manipulations.

Secondly, the audio can become garbled during playback. This problem is less clearly defined, and it is not possible to make the problem occur arbitrarily. The problem is that during playback, or monitoring while recording, the audio sounds garbled, or extremely distorted. The audio file is unaffected, it is only the rendition of the audio that can be heard which is affected. If the same audio file is played later after the problem is corrected, it sounds ok. The problem can invariably be corrected by re-selecting the A/D Source in the Hardware Setup window. All that is required is to click on the A/D Source popup, then select the option that was already chosen. A momentary buzzing noise can then be heard, after which the problem is corrected, for a time.

Other symptoms: Over a period of months, the problems vary and at times one might believe that the problems have gone away, but they will always be back again. We tried all the different clock patches from C-LAB and Line

Audio Designs but they have absolutely no effect on the above problems. However removing, then re-installing, the RAM-board (that means removing the board, removing the SIMM from the board then re-installing it) often corrects the problems temporarily. However within one day or so, or sometimes as soon as 10 minutes, the problems are back again.

The strange thing is that both our C-LAB MK X Falcon and that of an acquantance exhibit identical problems, yet we have been unable to find anyone who recognises these problems. We are always informed that these problems have not before been observed, or that we must simply apply the clock patch, but that we have already done.

I would like to know whether you recognise these symptoms exactly, when you suggest that we should simply apply the clock patch. It appears that the clock patch is designed to correct the clicks that are present in the audio; however that is not the problem we are experiencing. Is it true that the clock patch has been known to cure exactly the problems that I have described? Or are you recommending it only on the assumption that it usually fixes what problems people have, without considering the particular circumstances of this case?

Do you have any other suggestions about how we may avoid these problems or determine why they occur? Presently the C-LAB Falcon MK X machines are so problematic in operation that it is impossible to rely on them. We really must get this problem sorted out, but this is difficult since nobody seems to recognise the problem. Any suggestions would be much appreciated.

It would also be helpful if you could explain the details of the problems corrected by the clock patch, and why and how it works. After applying each different clock patch, I still cannot understand just what is wrong with the Falcon hardware, which is corrected by the patch. The patches seem to simply buffer the clock, but some of them also invert one of the clocks or in the case of the Line Audio patch, the clock goes through a trim-pot so that it can be adjusted from fully the clock, to fully grounded, or anywhere in between. What is the reason for all of that?

Please reply by email to this address: mb@tos.pl.net

Thank you.

> Can anyone tell me where i can get an Atari ST compatible
> mouse? Is is possible to convert a PC mouse to use on the
> Atari? Is an Amiga mouse compatible?

Most third party Amiga mice are switchable between the ST and Amiga. The only difference is in the wiring pinouts, so it is a fairly easy addition for the manufacturers to make.

The Wizard 3-button mouse I have for my Amiga, the Golden Image 2-button on my Atari, and and Alpha Data 2-button I have are all Atari/Amiga switchable.

PC serial mice are not directly compatible, but can be attached to the serial port and used via software, although this setup is not recognized by some game software. I have seen messages from someone that is working on a PC-to-ST mouse adapter that will plug into the ST mouse port, but I do not believe it is finished yet. A PC "bus" mouse can be rewired to work as an ST mouse, but true bus (NOT PS/2) mice are rather rare, and a switchable Amiga mouse should be much easier to find, especially in Britain (which is where I assume you hail from by your BTInternet address).

I'm afraid not. ColdFire is thought of as perhaps 95% compatible with the old 68K series. I beleive however many operations not supported are not used by many platforms. But you can't fool me it won't be easier to emulate the missing parts on a somewhat compatible CPU than doing it on a totally different one like PowerPC. I went to Motorola to read about it and I've discussed it with people. I would gladly like to know what we have missed or haven't understood?

i guess this is caused by the flatcable which connects the body of the pofo with the display. youï¿½ll have to replace it (BEST Electronics should be a good adress to get a replacement) or fix it by bypassing the broken leads with a thin - a very thin!! -wire. but soldering on flatcable is not very funny, i can tell you.... :-(

You're not alone on this. A few people see this effect, the cause of which
I still haven't found. I suggest you use the older TCP.STX from your
previous STinG package.

No that's entirely wrong. STinG does work very well with MiNT. And the
author did not say that he'd use MultiTOS, did he ? Still, STinG under
MultiTOS works, I merely say that I can't help in case of peculiar effects
as those usually arise from MultiTOS rather than from anything else.

That's right. This is mainly because these programs might do setup tasks
that rely on each other, and therefore must be executed in a certain
sequence. That doesn't work will parallel execution.

>messing with my desktop colors.

OK, I understand now. Unlike Imagecopy you can do conversions like this with GrafTool, by turning on its AES protection (AES Schï¿½tzen) setting. The 16 system colors will remain unchanged while GrafTool fills the rest of the palette with colors derived from the source image. The color values from the source image won't be converted color-for-color, as there will be some rounding during the conversion. So, if your background image has 240 colors, GrafTool might determine that 210 colors are enough and throw the rest away. But the bulk of the palette will now have the colors needed to duplicate the 'tones' of the background image (e.g. a blue spectrum to capture the sky; a white and grey spectrum to capture the clouds).

I don't know if you use GrafTool but here's how to do this with that program (you must be in 256-color mode)...

Run GrafTool and, before loading the source image, select 'Methoden' in the 'Optionen' dropdown and set these parameters:

Palette: Octree Complete
Rasterung: Keine (none)
Paletten auf TC: by Line
AES Schï¿½tzen: ticked
Always Convert: ticked

Now load the source image and right-click on its window after GrafTool finishes analyzing things... in the popup that appears select 'Konvert'. In the 'Convert to' dialog use the default of '256 Farben' and click 'Methoden'. This is the same dialog as above except the defaults will be different. Set the parameters to what's listed above except change the 'Palette' to 'Median-Cut mixed' instead of 'Octree Complete'. Click 'OK' to return to the 'Convert to' dialog and click 'OK' to start the remapping. Give GrafTool time as it does the conversion... the result should be a background image very close to what the source looked like, except the first 16 colors will now have the same color order as your

system palette, with the rest of the palette filled out with the colors necessary to duplicate the image's tones. To save the new image, right-click on its window and select 'Save View'.

Depending on the source image, you may want to use Floyd-Steinberg dithering instead of 'Keine'. Note if you want to load this new image into GrafTool again, make sure 'AES Schï¿½tzen' and 'Always Convert' in 'Methoden' (from the pulldown) are set to off -- there's no use remapping something that's already been remapped.

This method yields very good results, as I did a number of conversion tests with a wide variety of images.

BTW, I remember GEM-View's conversion dialog having a setting for 216-color remapping (so the system palette would remain undisturbed). As an alternative to GrafTool, you might want to check out GEM-View instead. But GrafTool definitely can do what you're asking for.

Okay, everyone mentions N.AES, which is -not- available to N.American users (like so many fine European apps).

From my own personal experimentation, STing works fine with MultiTOS using AES 4.0, but will not connect with AES 4.1...I followed Atari Computings' article on how to setup Mint with Geneva/Neodesk, (latest versions), and here, STing crashes out with an exception error. I also setup Mint once using Freemint 1.15 and KEMD R2, and again, here STing crashed out. Notice I do not (as I mentioned!) have N.AES or the Thing desktop either...

So from my own personal experience, STing works *great* under single-TOS and NeoDesk/Geneva, as well as MultiTOS with AES 4.0, but crashes under Mint/NeoDesk/Geneva, crashes under MultiTOS with AES 4.1, and crashes under Freemint 1.15/KEMD R2.

The difference seems to be when N.AES and/or Thing is used... Just wish I could get N.AES in the States... ;(

With BeOS, apps aren't the big problem - they can be found at www.be.com
and announced in the be newsgroups.

My son gave up on Atari about 2 1/2 years ago, bought a bebox and started
doing Be development. Its been amazing to watch him. His apps come up
fairly quickly. Be must have a nice development environment to work
in and that makes life fairly nice on the bebox. He just recently added
a dual Pent II box to run BeOS on and see that his programs work in both
environments.

>the next few days.

I would love to see a tool that automates everything:
1. Run OEXPORT
2. Run OEXPIRE
2. Remotely start the Sting dialer and when (and if) connected:
3. Run Popwatch both sending and recieving mail and quit
4. Run Newswatch like nr. 3
5. Have Sting log off
6. Run OIMPORT

This batch could be started by the "Internet" menu selection in Okami.
Off course it's a plus if Pop- and Newswatch runs in parallell if your
ISP is a slow one.

IMHO, they should have built the Milan around a PowerPC at 200Mhz at least to make a comfortable machine for the present user. Otherwise, a second hand PowerMac+MagicMac sounds like a better solution.

This was the problem with the Falcon: already outdated when it appeared on the market (after huge delays).

RG

(Don't flame me: I've used a ST for 5 years and had a good time learning music composition with it, then a MKX Falcon - which I consider the crappiest buy in my whole life !)

Have you set the environment-variable AVSERVER? It should contain the
AES-name of your application, e.g. 'AVSERVER=NEODESK'.

Also, STiNG has some problems under Geneva due to a missing AES-call.
I don't know if this is fatal though, as I have never tried STiNG
under Geneva.

4362. NEW program to run programs from STinG's LOGIN.BAT

Newsgroup: comp.sys.atari.st
Date: 1998-08-11 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <35cff404258280@the-gap.demon.co.uk>
Source record: 95433
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

I have just released a small program that can be run from STinG's LOGIN.BAT and will execute multiple programs in parallel as opposed to STinG's normal sequential method. This means that on a multitasking o/s, you can have programs like POPwatch automatically start and collect your email as soon as the dialer has connected.

It will only work on a multitasking o/s (obviously), and I have only tested it under MagiC. If it doesn't work for you then be patient and let me know.

Please wait a couple of hours from the time of this message, before trying my web site to give the changes time to take place.

The program is called SPAWNER.

Regards,
Gary

Isn't that annoying, I just get enough online time to take a browse on that page and he's on the move.... git :P

> You'd be surprised at how well "likely dead" Atari's can work. Ask your
> friend to fire it up and see what happens! ;-)

Too true :)

It takes a lickin' and keeps on tickin' :)

I've finally decided on a veloce+ for my STe, it's my birthday present :)
Falcon speed here I come :)
If anyones interested, check out TUS (The Upgrade Shop) for details on it, I'm sure it'll boost your performance no end, and you get tos 2.6 free with it :)
If anyone has one already I'd like to know, if not, I suppose by this time next week I'll be able to tell you if it's worth it or not.

AM.

I think therefore I AM.

> is it legal to get a copy of it if your original copy breaks? I

Well, the company which produced the software replace disks which get screwed, so if they are no longer around I assume there is no problem in replacing your corrupted software. After all, it has already been paid for. Although if it has been modified in any way, that is illegal (hacked passwords or whatever).

> personally wouldn't consider it so, but once again, I don't know.
> Anyone?

If it's worth it, replace it.
Of course, if you have any sense you will already have a backup of your favourite software in case of such occurrences, unless there is no way of copying them, certain games for instance.

> Get NoSTalgia. It's supposed to be the best at handling games (if

I have never used that, but I am sure PacifiST will do the same job if it's just for gaming, and the software doesn't have to be in .st format, it can run normal files from the hard drive.

> anyone else knows better, please post so). You'd also need to get
> software to make a .ST disk image, I think. You can find links to

See above about .st images.

> http://www.flash.net/~nameerf/TOSLINKS.HTM

Can I have that url on my links page?

Also, you can check out my web page for pacifist if it isn't in there somewhere.

> If it starts with 'BEGIN' it is uuencoded; use uudecode (UUD, NEWSie
> builtin) to decode it.

This is for sure not true for a line like the above. It's either a broken uuencoder (as a real uuencoded file does not say 'Begin base filename', but 'begin octal-unix-filepermissions filename', e.g. 'begin 644 foobar.jpg') or a base64-encoder which didn't stick to the rules on how to attach the result to a mail.

> NEWSie recognizes the difference, and handles the selection
> automatically (just an advertisement :)

It can only do the right thing if the message/attachment was properly composed. One beginning with 'Begin base64 soso.jpg' isn't.

Ciao

Thomas

You need that ajax chip from hell, but most TTs already had it. Otherwise,
you'll have to get in touch with Best Electronics.

My STE had it installed as standard even though it had a DD drive.

Cheers,
Nick

I have a really old TT without an Ajax, and HD works pretty well here.
I haven't noticed any problems so far, but I don't use floppies much
so I can't be 100% sure.

I own an one meg Atari STFM with a floppy drive and a colour monitor (no harddisk).

1) With this configuration, can I connect to internet ? How ?

2) I am also having a Pentium PC, if I put all my ST files into the PC, could I launch the programs from my ST by going through serial/parallel cables. How is the speed ? But, the problem is I cannot find any Atari harddisk around...

Please advise. I plan to configure the ST for my sister for educational purpose.

Regards.

It doesn't ring a bell, but, if I were to guess, I'd say it's
a holdover from when Atari tried to sell PC clones. back in the mid
eighties. If that's the case, I doubt there would be any way you could
use it with your ST system.

Yup - don't want to turn this into another "I love my Atari" thread,
but I'm the same. Admittedly, I could do with a bit more speed -
suspect a graphics card will sort that out, because when I run at VGA
res in monochrome it runs rings around my P200 at work.

It's probably a lot to do with the PC's operating system not being
very efficient. I'll leave you to guess what that is!

Hello all

I am posting this warning about choice periferals who are a part of the insight company,

watch out, the memory that they sell for 11.00 ukpounds (EDO 16mb 60ns) does not work in falcons! I specifically asked for the "non slim-line chip EDO simms" but recieved them anyway,

choice still wont give me a full refund!

then they start telling you how crap your ab040+nemasis atari falcon 040 is!

avoid at all costs!

Does anyone happen to know what happened to Computer Dungeon. They were based in the Chicago area. Their web site had a note from June that they were moving to the west coast, and they would be posting a new site address soon. However, I happened to check their site today, and it has been taken offline.

They are one of the better (remaining) dealers of Atari stuff, and I sure hope that they aren't closed for good. Has anyone heard anything.

>Regards, Robert
>

Hi.

Why would to convert mod to wave?

Waves sound better then MODS, MODS are smaller than WAVE, PCs can play MOD, Ataris can play MODs

anyway, there is one way.

this involvs a mod player accessory (dsp paula or something) and a wave recorder, and a audio plug
with male at both ends,

stick the ends in the mic and spk jacks and play the mod and d2d the output, you wont hear anything
though

this might not work though but its the only way i can think of

be warned a 100% quality wave of a 7min MOD file can be about 50Mb!

cheers

Ian Norton

Does anyone recognize the following phenomena:
I have a program called "Diamond Edge" to analyze, optimize, and/or repair harddisk partitions, to retrieve lost files, etc.

Now I have noticed that everytime, after I have used Newsie to read newsgroups and e-mail, Diamond Edge reports to me that there are some "lost clusters" on my harddisk. Edge can easily repair this, but it kind of makes me nervous anyway.

I would like to know if there is anyone else who can reproduce this problem on his system. I'm wondering if there is something wrong with NEWSIE (I haven't found this problem with other programs) or that maybe I should look for a better Harddisk driver ?

With the TT medium resolution on a VGA monitor you will have that
border regardless of what you try. It is just the way that the TT res
is proportioned (look in the manual specification for TT resolutions
and you will see this). If you get your hands on a video card for the
TT you can switch to a higher res which is able to take advantage of
all the VGA real estate.

I don't have a stacy or any experience with one, but just from common
sense I'd say that sure sounds like one or more of the conection
points of the cable connecting the monitor to the motherboard are bad
or going bad. I'd look for a solder joint about to come loose, a bad
crimp/solder joint on a pin (if there's a connector), or a worn/bad
cable itself.

You might consider a VGA to TV converter. There's one the Averkey
line, which is commonly used by studios and at conventions/shows, etc.
and it works very well to give a quality TV picture from any VGA
source. A VGA can be hooked up simultaneously too. They start at about
a hundred bucks and go up from there.

Yes I had Veloce+2 installed about 3 weeks ago and with NVDI 2.5 it
does potter along raaather nicely!

As to review, Jo Connor has done an excellent one in AC#10, well worth
reading and it is everything he says it is.

->I've never been able to get STinG to work with MultiTOS(AES4.10)/MiNT1.1X.X
->on my Falcon. Same results if a boot load single TOS 4.92(also AES4.10).
->Your just butting your head against a brick wall <g>. You'll get a bus error
->every time. This isn't a knock on Peter, he doesn't support MultiTOS, nor
->has he ever claimed to do so. I like using MultiTOS/MiNT1.15.X on my
->Falcon/Nemesis. Sure, MultiTOS is a bit flaky, but I've been able to over
->come all it's minor problems. I used it all the time with STiK/slip when
->I had that account. Of course, who has a SLIP connection these days? Just
->us Net Oldtimers <g>. I did recently setup STinG/ppp for a dude in Seattle
->on his TT for 2 ISP's including NEWSie/CAB. I've never used a TT in person
->before, but it's a real nice machine. It's always a learning experience.
->It took about 3 hours. Had to debug auto folder, HSModem prg's, use correct
->modem port for a 28k8 modem and "Optimize" STinG for max downloads.
->All of this makes me appreciate what it takes for someone to become Net
->aware with our Atari machines. It took his knowledge of his TT and my Net
->experience to get everything working correctly and now it does great <g>.
->I'm sure most just give up. If some one needs help in your area to get on
->the Net with an Atari, please help if you can. It's a rewarding experience.
->We use these Atari's everyday, so there's no reason to buy a cheap PC just
->to get on the Net.
->---
->CU,
->
->Charles

Thanks for the confirmation, Charles. I spent quite a bit of time trying
to get STing to work with those various setups. I'm very happy with my
current STing setup under both singleTOS and Neodesk/Geneva. There are
several Atari users in my area, but sadly, none of them are as "active"
as I am, although I'm constantly encouraging them. I've offered numerous
times to help them get on the 'Net, but they seem to be satisfied with
calling my BBS <smile>.

PC's? We don't need no stinkin' PC's!!! <lol>

See ya later...

->POPGEM just look for the environment variable AVSERVER. Is AVSERVER
->defined anyweher in your setup? Does aftp work well if you drag and
->drop files on the trashcan or some windows directory?

Yes, Neodesk/Geneva supports the AV_SERVER protocol. I've got it setup
as well, but it still crashes... ;(

In GEM.CNF, you'll find the line:

setenv AVSERVER=NEODESK

and you pick "Use Neodesk for AV Server" from a dropdown menu...

->Well, here I just followed the STIK way of doing. It just happened
->that it worked here under Gluestik.
->Then I tested under Magi and sting. It all worked fine.
->the only one left is geneva. So either geneva has a prob (which I
->doubt) or that you didn't set them correctly.. I don't know..
->singletos/mint/magic work fine under stik/sting and mintnet/gluestik.
->If more people would confirm that under geneva. A fix might be worth a
->try.

I'm confirming! ;-)

Message-ID: <6qqd63$1kv$1@heliodor.xara.net>
Source record: 95519
Cross-posted to: abg.atari,comp.sys.atari.st

Can anyone help me with these questions?

I have an Atari 1040 STE that is fitted with both TOS 1.62 & TOS 2.06 but my machine no longer works. Having read about some of the emulators available, it seems that in order to run these, I would need a dump file of a TOS, but this seems impossible to do with a dead Atari. Has anyone got any suggestions?

Also, does anyone know if there are any places that would still repair an Atari ST?

Any information would be greatly appreciated.

Thanks.

That's why Atari isn't around anymore, but you can't blame the
company. With limited resources, the only thing they could have done
was join the PC bandwagon. It takes a lot of money to develop new
machines. They tried to make the Falcon unique. When they had the
edge with the ST, they had an 8mhz machine with a color display when
the rest of the industry was still at 2 or 4.77 mhz and a mono monitor
for the same price. When they introduced the Falcon, 33 and 50 mhz
machines were the norm. To gain an advantage, a minimum of a 60mhz
040 chip should have been used and that was in 1993. My concern is
why spend $800 bucks on a 40mhz machine when I can get a 200mhz
pentium, run DOS and use one of the ST emulators for $500.

Then again, WHY NOT

BTW: Why don't you like the Falcon.

B.P.

I was plagued with this NEWSie problem, too. The corruption occured under STiK/ICD Pro and STinG/HDDriver, so it had nothing to do with the hard-disk driver. Somehow the corruption was caused by NEWSie interacting with my specific ISP.

Another problem, besides the lost clusters, was that my default.grp file routinely got trashed. To 'live' with these problems, I changed NEWSie's offline path to another, less important partition and backed-up the default.grp file on a regular basis. Ultimately the only cure for these anomalies was for me to change newsreaders: under FireNews/Babel and Okami/NEWSwatch, disk corruption of any kind simply doesn't occur.

Like you, though, we're exceptions to the rule -- the vast majority of NEWSie users don't experience disk corruption problems.

4408. Problems with CAB v 1.5

Newsgroup: comp.sys.atari.st
Date: 1998-08-11 00:00:00 UTC
From: frankie@des5000.demon.co.uk
Message-ID: <902878445.3430.0.nnrp-06.d4e473f6@news.demon.co.uk>
Source record: 95529

Hello everyone,

I would desperately need some help from the CAB specialists among you .
I am using CAB v 1.5 with its own CAB.OVL file, together with STiK v 1.12.
My hardware setup is as follows :
Atari 520 STFM, TOS 1.4, 2.5 Mb of RAM.
No Hard drive (probably contributes to my problems)
1024 Kb Ram disk as drive M
Motorola 3400 modem @ 28,800 bps.

Now for my problems :

Sometimes CAB works fine, but when I download multiple web sites in one
session, or one very long web site then things start to happen.
The most common problem is me getting the dreaded bombs and the well
known proverbial crash.
Sometimes on quitting CAB I get a whole row of bombs and the system jams up.

It also looks like the program goes round in circles before it displays anything,
I always see it is loading the same size of data (or is that a coincidence ?).
When I used a dialog box during loading it displayed errors almost
constantly, the most frequent ones being #147 and #148 (what are they ?)

Then for the cache : My setup is as follows : Image cache 2560 Kb maximum,
keep free 256 Kb, Internet cache drive M, folder 'WWWCACHE', 2 Mb
maximum, keep free 1 Mb.
After using CAB and looking through the cache on the ramdisk (CAB fills
WWWCACHE on boot up with folders named A-Z), there is hardly anything
in there (if anything at all), I thought CAB dumped everything you downloaded on your
hard drive (ramdisk in my case).

Finally : How could I improve and enhance the graphics (certain monitor,
graphics card or what ?), atm I work in med resol. ie.640X200 pixels.

Well, I hope someone will have the courage to go through my essay and
help me solve some of the problems.
I realise I should get a hard drive ASAP, but until then I think some problems
could be solved.

I usually hate to admit defeat,or has the time come to upgrade to a PC
(I mustn't think of it).

Any help will be gratefully appreciated.
Thanks,
Frankie.

Which CAB.OVL are you using?

Also for an explanation of error numbers from the CAB.OVL check
either the documentation in the archive or from the version on my page.

While trying POPGEM 1.0, I noticed that 'those three lines' must be in
the dial.scr instead of the default.cfg. They should be viewable in
STinG's dialer under 'Environment'. Or am I wrong here? I can't say for
sure because v1.0 never worked with my POP server. Initially, though, I
had the three lines defined in default.cfg, and POPGEM didn't see them
(errors).

4411. Failed Drive...

Newsgroup: comp.sys.atari.st
Date: 1998-08-11 00:00:00 UTC
From: dave.lee@ftn.org
Message-ID: <4b6_9808112056@tor250.org>
Source record: 95532

Perhaps someone with experience might have the answer for me about
a Segate ST11200N SCSI 3.5 full hieght Hard Disk Drive that
will not allow me to access the partitions when I re-boot with
either ICD or HDDRIVER, the controller reports that the drive is
on the chain but no partition information is shown. When I try an
IDCHECK, it is reported on the chain. But when I try to access the
drive to either format or write partition information, the drive is
not shown as available. I normally use ICD 6.5.5 and have tried 3
different versions of HDDRIVER and a couple of different versions
of AHDI and the only error that has been reported back is....
Sense Code $04 I have noticed that it takes quite a long time
for this drive to report that it is ready (the LED stays on for
a long time when first powered up). Am I to assume that the
controller is faulty and this drive is now land fill? Thanks.

You definitively do miss something:
I'm talking about Media access, not about the CD-ROM drive itself !
I also own an ultra Plextor SCSI 32 speed CD-ROM on one of my TTs.

The topic is to be able to access a whole bench of interactive data
which other computer users are able to access ... Don't say you didn't
understand me ! Everyone here is aware of the great frustration it is.
When your little boy will be in age to look at the games shelves in
the shops, he will ask you very soon to buy some educative or game
CD-ROM and at this time ... don't expect me to tell you the story.

>BTW: Who needs a Milan to play games?

Anyone with any computer needs at some moment to play ... hm ... well,
I think ... :)

>Informative,educative and culture can be found on the Internet.

I suppose you are joking here Martin ... yourself don't access so much
the net (www) to such purposes ..... You said it was too slow !
I suppose you know the differences between internet encyclopedia
access and CD-ROM encyclopedia access ?!

Don't go blind Martin ... these things really exist you know ;)

Please, people having prob with previous version. Try this one.
What's new? nothing really, just bug fixes for more POP server type.
mime and uudecode done automatically.
Last email titles shown at first "Connect Server"
Updating for each email when "fetching headers"

Yes popgem is a gem POP3 client. (to get email what).
The program is very basic, but is very wide. So you have total control
over your email and your system.
Once again, a decent desktop and a multitasking OS needed.
Dan wilga. IF neodesk doesn't support all the av-messages. Do you plan
to do so for next release? or is geneva/neodesk a dead issue?

As for the env variable for stik/sting. I don't know what to say.
I used the way STIK does. It worked for gluestik as well.
Then when I tried sting. I noticed I had to use another file to set
them up. At this point, If sting doesn't recognize the env variable.
Well I can't get any further. Just got to mess with sting. I got it
working. Even under magic/sting. So the STIK method seems to be sting
compatible. (maybe up to some extent).
I worked on it a lot. Will keep on.
Now you to try.
Thanks.

Hi there

I dont think you can run linux, unfortunately you need:

68030 cpu (TT, falcon or pak/68)
FPU (math co-processor)
4mb of ram
and about 100mb of hard drive space,

keep looking though as linux normally runs on anything, i had a 8086 laptop with minix 2.0.0,

i am looking too, i have a falcon though.

: Yes, Neodesk/Geneva supports the AV_SERVER protocol. I've got it setup
: as well, but it still crashes... ;(
:
: In GEM.CNF, you'll find the line:
:
: setenv AVSERVER=NEODESK
:
: and you pick "Use Neodesk for AV Server" from a dropdown menu...

The AVSERVER=NEODESK needs to be set in NeoDesk 4.05 under environment settings.

You must also ensure that GEM.CNF is on the root directory of the boot drive when running Geneva 1.06. This will also clear up the problem of not seeing the RSC files with some programs.

You might need to reinstall the Geneva programs and some of your RSC file direct from the original disk. Try activating your HD's write verify when installing software to prevent errors.

There's almost no reason to use UUD, unless you need long filenames,
since MUNPACK will handle just about all uuencoded files. Its only
drawback is that it will truncate long filenames to 8+3 format,
though it does handle lowercase in filenames.

Another nice thing about MUNPACK is that, depending on the avserver,
you can drag and drop virtually any number of files (not necessarily
all the same type) to it and it will extract them in order. I've
dragged literally over a hundred encoded files to it at once under
Magxdesk and it decoded every single one of them.

No, it's not that STinG under MiNT only works with N.AES. The correct notion
is that STinG under MiNT works well with every AES except MultiTOS. With the
release versions of MultiTOS is still works reasonably. But you can also use
Geneva, or, if you wanna use a less than complete AES, XaAES.

> From my own personal experimentation, STing works fine with MultiTOS
> using AES 4.0, but will not connect with AES 4.1...I followed Atari

That's what I said above. AES 4.1 is not a release version, but a buggy beta
that somehow escaped the programmer's labs.

> Computings' article on how to setup Mint with Geneva/Neodesk, (latest
> versions), and here, STing crashes out with an exception error. I also

I doubt that it's STinG or Geneva that crashes here. Many people use exactly
this combo without problems. Try without system tools first, i.e. without
AUTO folder programs or accessories.

> The difference seems to be when N.AES and/or Thing is used... Just wish
> I could get N.AES in the States... ;(

Thing is available on many ftp servers I'm sure. And I'd guess the N.AES
people would process orders from the US too.

Cheers Peter

No it's not. It's that minor that few people will even notice it. It merely blocks the multitasking when resolving, or starting up a TCP connection (the latter only with some clients). This usually only takes one or two seconds, so people need to be quick to observe the effect.

After putting them in DEFAULT.CFG, you need to restart to let them have
effect. DEFAULT.CFG is only loaded at boot time.

> .HTM extender & then loading it from disk... all the links work.
> But I have to do this with _every_ page accessed.

The extender should be irrelevant here. The web server tells the browser
about the MIME type of the document, and it's the MIME type that the browser
should use to decide what to do. At least, all the browsers with the network
code integrated do it that way.

Often, it's the web server which bases it's decision on the extender of the
file. So it's likely that the MIME type was still text/plain, rather than
text/HTML. So most likely, CAB / CAB.OVL did it just right, and Adamas did
wrong here.

> Another nice one bites the dust......Pity. :-(

Don't give up on them yet. Their SparQ drive is selling very well (and it should be), so after trimming down the company, they should be in a position to get back into the black.

When you compare a 1gig Jaz to a 1gig SparQ, the SparQ is cheaper to start out, but more importantly, has a MUCH lower cost per cart ($40 single, or $33 each in a 3-pack).

The downside is that unlike the Jaz, the Sparq has no SCSI version, and SyQuest, seeing SCSI as a "high performance" interface, has no intention of making one. For SCSI, you have to go with the SyJet, which is about the same cost for the drive and carts as the Jaz, but gives 50% more storage per cart.

Oh, regarding "someone else had a 200"; Huh? The only removables I know of around 200megs except for SyQuest's EZFlyer are 230MB MO drives, which are about twice the price for the mech. Its main competition was the Zip 100, which had a lower capacity, but had the advantage of more durable media, and *initially* a lower price.

I have both a SCSI Zip, and an EIDE EZ-135 (on my PC), and although the EZ-135 is very nice, I will have to give the Zip more points for ease of use, and I would not worry if I dropped one of Zip carts to the floor.

That said, I am still looking forward to getting a SparQ as soon as I can get $300 together (mech + 3 extra carts) all at once.

Would an environment variable deal with that? (I'm no expert.) Anyone
who feels competent enough to write a LOGIN.BAT file should also be able
to cope with one of the programs for defining environments.

Hi Neil,

always looking for improvement/variation, I grabbed these from the site.
Kicked Eurothin into my MAGX.INF as a 10 10, also as a 10 8 font, but the
menu's don't look OK to me... Kinda foggy text then, don't know how to
exactly describe it. Some fonts surely looked OK, and when choosing Eurothin
for Newsies article windows it's not that bad either. Kinda strange it won't
work right in the AES. So I've set that back to the good ol' Rufus ANSI one.

No, for some strange reason, the double sided floppy had a smaller number (SF314) than the single sided one (SF354). The 314 is DS/DD. You can always try formatting a disk if in any doubt.

Cheers,
Nick

Yes, but the "how" is in the Quick FAQ among other places...

1Mb is a bit short, and the Web will look ugly in mid-res or even worse in 40 column low res. It'll have to be no graphics anyway, and slow without a HD asa cache.

As far as email and news are concerned, it is possible, but you'll be stuck with your disk space.

So, yes, you technically can, but it would be MUCH better to upgrade your machine if you plan on doing anything serious.

Ghostlink would do this, but it is slooooooooow. HDD Daemon supposedly does this trhrough the // port, but I've never got it to work. Anyone ?

Check out the Quick FAQ for the hard disk question.

4443. Newbie, dumping software to ST?

Newsgroup: comp.sys.atari.st
Date: 1998-08-12 00:00:00 UTC
From: Gabriel Lima <gali@enea.se>
Message-ID: <35D140D1.BD0E3A4@enea.se>
Source record: 95453

Hi.
This is my first post to the newsgroup.
I had a ST 520 many years ago, and I really loved it. Now, I was surfing on the web when I came across
this really fantastic web-site which has a whole collection of software for ST
as zipped disk images, mostly game compilations. The zip-files contains files with either .st or .msa extensions.
Now, if I download the files to my pc, is there some way for me to dump them to a ST-formatted
diskette and actually run the games on a real ST? And is there any PC software with which I
can read, write, format in ST format?

A friend of mine has a real ST, and it would be really fun to try this out. If it works I might
buy his ST.

If this is a obvios question, please point me to a FAQ or something.
I am really anxious about this, please respond.

Have a nice day

Gabriel

Hi Kok,

I recently spent a few days trying to do what you're are trying to do with a configuration like you have. I came to the conclusion that it is not possible. You will need about 2 megs and a hard drive.

If I could have gotten ANTMAIL to sign on to my MAILHOST, I could have at least had EMAil.

I got STinG/Dialer to work and ANTMAIL would get mail, as I recall but would not SEND. It might work with your MAILHOST. Worth a try!

If NEWSIE had just an EMail version without the NEWSGROUPS, FTP, etc it would probably be small enough. However, this is not the case.

So I found my friend a MEGA STe and it works fine for at least EMail. Haven't tried CAB yet but should work.

Hi Dave,

I have had a simliar problem with my SyQuest EZ135. Here is what I did. Run ICD Hard Disk Formatter program, but do not format but select PARTITION. When this Partition menu opens, you will see all the info about your partitions.

In the lower left corner, there is a box called WRITE PARTITION INFO ONLY. If you have ICD manual, it is on page 26-28.

I had lost the partition info some way and after performing this operation, all has been well ever since!

Good luck!

Hi Neil,

don't know for sure about that: they don't experience it, should that read "They don't notice it" or "They regularly check their disks and find no corruption"???
Remember I had these tremendous problems when starting on the Net with Newsie screwing up my Route.tab and Cache.dns? All in all I needed about 14 days to get that one fixed and get the whole damn' thing running decently. Remember Peter R. and I (and others) had this conversation about it? Peter explained that somehow Newsie was fiddling around with files/data it doesn't have authorization for, so to speak... In the end everything was running OK here, even the Route.tab and Cache.dns were left untouched, and I haven't been running into problems using Newsie ever since (at least, not related to the corruption problem).

I recall several users had related problems using Newsie. From what I remember all could finally manage to run Newsie without SERIOUS troubles but somewhere Newsie was/still is doing things it shouldn't do... Now Martin here reports it's the logfile and the problem's not that bad, but the bug is still there.
John, U listening???

I had some disk problems a few versions ago. My theory was that if I
didn't mess with any NEWsie related files while it was running,
I would be ok. That included .inf, .grp and downloaded files.
I think that files were being left open, anyway, that was something
that Correct pointed to when I started having problems. I do run the
working directory on my EZ drive and run Correct often to see if there
have been any problems.

(corum@sasquatch.com) stated:

> Is this PS3000 unit something I can just run
> cables into and get my system going?

Yes, the PS3000 was made for the ST (specifically targeted at the
original 520ST, which had no internal floppy).

Alas, unless the unit has been modified, the floppy is a single-sided
unit.

I believe the monitor section is quite good, however. If I am not
mistaken, it used the same tube and electronics as the first (and best)
version of the SC1224, the "swayback" model manufactured by JVC.

Double-sided. The SF354 was the single sided version.

> Can anyone help me with this? Does the "SF" stand for "single floppy"?

All the ST peripherals started with an "S" in the model number (and all
XE peripherals with an "X"), so it seems safe to assume the "S" just
designates it as an ST peripheral, leaving "F" for floppy.

Why they gave the single-sided version a higher model number is something
I am clueless about,however.

Why not just use the AVSERVER if installed? It will launch any program
without problems (atleast Thing does).

appl_yield() isn't implemented in Geneva, which makes STiNG block
during certain operations. I don't know if this cause any other
problems.

No, because a 68040 run faster than a 486 in equal frequency, more
over it's a matter of optimisation.. atari progs run faster than
win 95... just have a look at wensuite which run as fast as Netscape
(on a pentium 100) on a simple falcon...
so... I've seen in fr.comp.sys.atari that the milan was avalaible and
run terribly fast... in less than 5000 Frs (under 1000$) it's very cool
I'll bye one in september.... we have to follow, no ? I got my st since
1989 and i'm happy to use it but I need speed and extended resolution
and when the dsp card for milan will be avalaible we will have one of
best computer ever made...

so, please excuse my poor english i'm french....

Thanks a lot for the anwer (very quick too).
Ok, lets suppose that the disk I format to 720 kb in my PC
can be read by a ST. Now, how do I do to transfer the disk images
in .ST or .MSA file format from my PC to the diskette, so it can be read and

booted by a real ST ?

Thanks in advance

Gabriel

I suppose it could be the way that newsie saves the files for email and news, as I assume they would become quite fragmented if you don't clear out your mail box regularly.

That's just a "guess" at what it could be, so don't quote me on that, but if I had the same problem that's what I would tell myself.... as opposed to saying "aaaaaaaaargh the hard drive's gonna melt" :P

AM.

I think therefore I AM.

No, these are similar to a SC-1224 monitor along with a 3 1/2 inch
360K (not Double side, only single side) disk drives. I've seen them
before, Nice setups, too bad Atari didn't make that many of them.

Chris,

you might want to check out this web auction site at
http://www.ebay.com, I've seen a number of EIDE 105 meg drives some
with a substantional number of cart's for sale with them.
You bid on the items and see who win's the highest bid by the closing
time of the auciton. I've purchased hundreds of items on this site
and only been cheated about twice, both times on games..

Mmmm .... not a lot of space!

>It also looks like the program goes round in circles before it displays anything,
>I always see it is loading the same size of data (or is that a coincidence ?).

If there is no room in the image cache CAB will need to reload
graphics whenever they are re-mapped to the screen.

>Then for the cache : My setup is as follows : Image cache 2560 Kb maximum,
>keep free 256 Kb, Internet cache drive M, folder 'WWWCACHE', 2 Mb

>WWWCACHE on boot up with folders named A-Z), there is hardly anything
>in there (if anything at all), I thought CAB dumped everything you downloaded on your
>hard drive (ramdisk in my case).

This is almost certainly the problem.

Image cache is held in RAM. WWWcache is held on disk (or RAM disc).
With STiK, CAB and the RAM disc in RAM there is probably very little
space for CAB to allocate as Image cache whatever settings you have
applied in CAB. If you only have a Imb RAM disc why have you set it to
"Mb max. in CAB and why have you set Keep Free to 1Mb? If you set keep
free to 1Mb for a 1Mb cache it's not surprising there is not much in
it :-)

Set Image cache to zero. Find out how much RAM you have left when
STiK, CAB etc. are loaded. You will then have to decide how to
apportion this RAM between the Image cache and the WWW cache(RAM
disc). You probably will not have much space to play with :-(

You MUST have a reasonable Image cache (say 100Kb) otherwise CAB will
need to reload the graphics whenever you scroll up/down a web page.
With this config you should regard the WWW cache as a luxury - you may
not be able to allow much space for it. You could try setting up the
WWW cache on a floppy - slow, yes, but then the RAM could be used for
image cache.

> I usually hate to admit defeat,or has the time come to upgrade to a PC
> (I mustn't think of it).

NO! Don't do this! You would be a lot happier if you had a hard disc.

There are about 4 sub-codes to this sense but they all mean drive not ready. It may mean that it hasn't got up to speed (check that you have a good 12v supply to the drive - if it's an oldie it will be taking 3A or so). It may mean that it cannot read the full operating microcode from the disc into it's RAM store (corrupted private sectors).

Frankly, if a beefier 12v supply does not help, it is becoming a paper-weight.

I wouldn't use the phrase "terribly" fast ;-) OK, it has a decent graphics-card and pretty fast RAM, but the CPU is too slow. I have a Falcon with an Afterburner myself, and while the graphics (Nova) and disk probably is faster on the Milan (esp. graphics), the 040 with 32Mb 32-bit fastRAM running at 40MHz certainly is faster than the Milan. But it's still too slow ;-)

The Milan is a fine piece of hardware, but I think it was a mistake not going straight for the 060. I will certainly not buy another slow 040, especially not now when Motorola are shipping 75MHz 060's.

Hi Gabriel,

There are sollutions to your 'problem'. There is a fantastic st emulator for pc called 'Pacifist'. It runs atari file on your pc, st en msa files........there are also tools for the pc....I'm not sure what they are called...something like stdisk. (I've it at home, so maybe I can put it in this newsgroup).....they convert the st en msa files to bootable st disks....you disk will be formatted etc.....

Chris

I was under the impression that Falcon's had a serious bottle neck type problem, and that they could be significantly faster. The Milan is 8 times faster than a falcon, so an 060 version would be your "terribly fast" speed :)

> The Milan is a fine piece of hardware, but I think it was a mistake

Yes, the problem with the Falcon/Afterburner is that the ST-RAM is so
slow (16 bit, which cripples the 040). But in general this only
affects video-performance (and perhaps disk), when it comes to raw
CPU-power then the AB is faster than the Milan. I've heard that the
Milan can be clocked at 32MHz though, which will close (or atleast
narrow) the gap.

Ofcourse, if you're used to a standard Falcon (or even TT), then the
Milan will feel "terribly fast", but not for long. Trust me, I was
immensely impressed by the speed of my Afterburner one year ago, and
when I got the Nova I was even more impressed. But now I desperately
want something faster...

Thanks, but I did manage to get 3 in the end by phoning Syquest
directly. They have limited stocks, so they won't actually sell to
dealers any more, only in limited amounts to the general public.

I've now got enough storage for my entire hard disk, so if I run out
of backup cartridges I really should think about another hard disk and
a higher capacity backup unit. :-)

I think the current theory is that Newsie uses a 'bad' file handle
somewhere. i.e one that hasn't been initialised or has been
overwritten.

Source record: 95481

The Milan is really a good beast, but there is yet one main reason
to not buy this new really great machine:

-No access to educative, informative, games, culture,
encyclopedias CD-ROMs. This is really the main drawback.

An owner of an already good equiped Atari machine (I mean Falcon or
Mega STE, TT030 graphic card equiped...) will think two times before
buying another machine without CD-ROM access ...

I'm in this case ...

Paying money for the same machine is something you really have to
think about even if this new machine is a lot faster than those you
already own ...
And YES, I know the beast is a lot faster than my TT030 !!!!
A lot of people prefer to cross to a Power Macintosh and get Magic Mac
easily working on it like a lot of serious german users/developpers
...

But, be serious, the Milan team has done a great work and all my
wishes go to this people ... They will sell hundreds of Milans ...

Another extremely good point is the excellent support of the Milan team
and the whole packaging is really more polished than the Hades or Medusa
!!! Think about that ...

Long life to the MILAN !!!!!

> Ok, lets suppose that the disk I format to 720 kb in my PC
> can be read by a ST. Now, how do I do to transfer the disk images
> in .ST or .MSA file format from my PC to the diskette, so it can be read
> and booted by a real ST ?

Well, if you are having a problem converting the images then don't. This
is a very simple way and works on most things, but you need Pacifist.
Load up the image as either drive a or b, then simply just copy the
contents of that disk image onto the hard drive.
Locate the files on your hard drive and copy them to floppy :)

AM.

I think therefore I AM.

>corruption"???

In my case it was impossible not to notice the corruption -- duplicate filenames are a dead giveaway. Other times the corruption was 'silent', only to be discovered by Correct, or a Kobold warning before a file operation. In my own mind I'm convinced that the cause was with the way NEWSie interacted with my news server: Sometimes it would pause while downloading, as new articles arrived on the server at that exact moment. At this time, all writing to the offline path would stop as the modem lights battled away in what seemed like a momentary state of chaos.

>Remember I had these tremendous problems when starting on the Net with
>Newsie screwing up my Route.tab and Cache.dns? All in all I needed about 14

I never had any trouble whatsoever with STinG's route.tab or cache.dns files... just NEWSie's default.grp file and the offline path for articles (that's why I point to the news server as the source).

BTW, I've done a number of offline article downloads with NEWSie 0.90 and it has worked flawlessly.

Do I miss something here? No CD-ROM access? AFAIK the Milan is equiped
with a 24 or 32 speed CD-ROM.
BTW: Who needs a Milan to play games?
Informative,educative and culture can be found on the Internet.

4477. Atari->SCART

Newsgroup: comp.sys.atari.st
Date: 1998-08-12 00:00:00 UTC
From: agt3@york.ac.uk
Message-ID: <6qspp9$nt9$1@pump1.york.ac.uk>
Source record: 95487

I have a list of pinouts for the Atari monitor pinouts, and SCART inputs, but I am not entirely sure which to connect (some are reasonably obvious, but others less obviously equivalent). Does anyone know, or know of, some additional information on creating an ST to SCART lead? Also is it possible to run hi res across the SCART (being able to retire the monitor from my living room will make things rather tidier)

Thanks

Aaron Turner

> there (if anything at all), I thought CAB dumped everything you downloaded
> on your hard drive (ramdisk in my case).

Yes that's right. You've told CAB to keep 1 MB free on the drive
with your cache. But because this drive is only a 1 MB ram disk
CAB is not allowed to save anything in it (because 1MB of these 1 MB
should be left free).

> Finally : How could I improve and enhance the graphics (certain monitor,
> graphics card or what ?), atm I work in med resol. ie.640X200 pixels.

I would suggest to upgrade your RAM first (4 MB). IMHO the main problem
will be the lack of RAM. Then you should consider to buy a hard disk
(this will also free RAM because you will no longer need a ramdisk).

In uno strano messaggio del 11 Aug 98 rgronoff@imaginet.fr (2:333/608.1) scrisse al povero All :
r> I've tried CBHD+BigDOS to read my PC formatted SyQuest EZ 135 cartridges,
r> but the only result is:
r> - the SyQ cart isn't recognized
r> - my ST hard drive is perpetually rebooting.
r>
r> Any solution ?

The only thing I can say is that you must format/partition the cartridges in a DOS shell (afdisk) instead of from win95 resources/disk/format.

4480. New MyMAIL Version

Newsgroup: comp.sys.atari.st
Date: 1998-08-12 00:00:00 UTC
From: erikhall@mail2.tripnet.se
Message-ID: <6qssaknqu1@minox.tripnet.se>
Source record: 95490

New version of MyMAIL can be found at my homepage.

Bugfixes and new things

**** 12.08.1998 ****
Rev: V0.67

- Fixed more problems with the new window handler causing bombs.
The most problems was related to MagiC.
- A bug in printout handler fixed.
- Under MiNT the printout is now runing in a thread.
- Line longer than 70 chars in printout are splitted
into more than one line.
- If the file alias.lst was "0" size the alias edit
was locked up.
This problem is now fixed.
- Mail header from for example Outlook Express can be encoded with base64
this is now decoded by mymail.
Mymail will NOT encode the header in base64
as this violate the specificatinons saying that it must be readable
in any mail client without the need to decode.
- Faster startup of the program.
- Many small bugfixes.

From: NOSPAMwplatt@bellsouth.net
Message-ID: <GQmA1.126$ve.336816@news2.mia.bellsouth.net>
Source record: 95491

Your problem is lack of memory. With 2,5 megs and a 1 meg ramdisk,
you have 1.5 megs for program execution. After STing and Cab are
loaded you probably have about 1 meg for the cache in cab.

You can get a link and a Syqest 230mb removable for about $200 bucks.
Once you have a hard drive, you'll wonder how you ever got along
without it.

Try using CAB in low rez with greyscale option turned on. Get ahold
of the Monster bigscreen emulator. This will give you an emulated
640x480 display. with 2.5 megs of memory you are probably better off
using the text only option

Hope this helps.

B.P.

Hi Peter,

Gee, I wasn't complaining :) But, if you're offering... ;^)

IOW; Yes, for me, configurability is a good feature; I have several
different users using the same system. It would even make sense for
me, for the Dialer to look in $HOME for its config and LOGIN.BAT :)

Whatever you decide, it's still an excellent package.

All the best,
Misha

I still will hold out for an '060 plus DSP combination. I've been
using ST's since 1989 also and would prefer to stay with this platform
so I'm happy that a new machine is coming out. They supposedly will
have an 060 out soon, so I will wait. Besides, I'm in the US, and it
will be hard to get one.

You're right about the optimization, there are still things my STe
does that amazes me for an 8mhz machine.

Here's a chance to get your Atari-related article in print. OK. we're all volunteers here, and nobody gets paid.

However, if your Atari User Group is down to 3 survivors meeting in in a basement rec room, and your club newsletter last published in 1995, you might have wanted to write something, and never got the chance.

Four Atari User Groups are pooling editing/publishing resources to put out a combined issue for September 1998. I am the hapless senoir editor for this issue, and I am extending this invitation to the on-line community to see if there is any response.

The so-called BIG ATARI NEWSLETTER has published twice before. It is a hard-copy `reader's digest format' (folded 8 1/2 x 11, saddle-stitched) produced using Calamus SL. Circulation is a mediaeval cross-linking of the surviving User Groups on various old exchange agreements going back to the days when there were many alive and active groups. Cut to the chase, John: it will be just over 100 copies, but each mag reaches 3 to 8 readers on average. It's nothing like ATARI COMPUTING, but it is a worthy effort.

So, if you have an idea for a software review, a story about a crash and recovery, or even an ornery bit of opinion, send your requests and general intentions to me, John S. Gray, at:

ag352@chebucto.ns.ca

...and put in the e-mail header [ARTICLE?]

Thanks.

I won't be offended (nor surprised) if this gets zero response.

> Sometimes on quitting CAB I get a whole row of bombs and the system jams up.
>
I used to find that Stik caused a few problems and changed over to
STing which seems to work better. I'm also using CAB 2.5 which ironed
out some earlier bugs I think.

>It also looks like the program goes round in circles before it displays anything,

But if your drive M only has 1024 Kb, or 1Mb, and your Cache is set to
keep 1Mb free, then wouldn't this mean that nothing would be dumped in
in it?

Hi Paul,

well, who knows? Although I think I heard others tell other files are being
mishandled :-)

This was some time ago, but I recall John said he couldn't reproduce the
problem on his set. What happened here was: I set up Sting and Newsie for
the first time, and thus Sting had a Route.tab and Cache.dns provided with
the package. Cache.dns had some server names Peter put in. Once Newsie
started, both files got corrupted. When I finally simply left Cache.dns out,
a new one was generated by Sting with the right addresses and the problem
was simply gone... Took me a day or 3, 4 to find THAT out...

Ever since: no problems :-) So start digging. I was suspecting Sting at
first, since those two files went crazy everytime, but Peter explained it
must have been Newsie, whereas it has no business to deal with those files.
I recall others had similar problems; Newsie screwing files not belonging to
the package.

MiNTOS/K[EG]MD will do nicely. KEMD can be found at

www.primenet.com/~kellis/

Linux/NetBSD needs atleast a 030 (and possibly a FPU) to run.

Hey, how did you get Babelfish to translate a FILE, Joergen? It seems
to only want to do about 5 lines at a time. I and others have tried to
persuade it to read a whole file but have failed.

Hi Roger,- at first I didn`t belive it was doing the translation, but
clicking back and forward in CAB, and there it was.

I made a html file and uploaded it to my homepage, then on to Babelfish,
entering the URL into the text window and ask for a translation.
It only did the half of the page, apparently about a sheet of A4 size
or someting like it, but I made another html page of the rest and
did the same thing again.

When all this was over I merged the two pages into one and uploaded it to
my homepage.

cheers

That's the point. Exactly you get a ready to use Mac or PC
for that price. (Including a FrameGrabber)

>I don't understand why the developers
>of the T-060/Hades-Milan haven't bothered to write drivers for the
>PCI digital video capture cards that are available. Most cards now

I think all the guys are busy with the machine, OS and drivers
for SCSI and some special Atari compatible cards. Also for more
as one VGA card.

Milan PCI internals are avaiable from the MILAN Homepage!
(As ZIPed-File!)

I'm sure somebody can use these info to create special drivers
for frame grabbers and some else.

>task. If such a package existed, it would surely be an alternative to
>using a Mac for DTV, and with the addeded benifit of being one of the

Hi all,

I followed this discussion over a while now and you all
came up with some interesting points.

I am working for the Milan Corp. and want to answer some
main questions:

- Why did we choose a 040 over a 060?
As you all know it was very important for everyone in the TOS-market
to have a running machine everyone can afford to buy. So for the
first machine the 040 seemed the right choice, because it does not
cause to much costs and it was available from the first day of the
concept on - you all may have heard of the problems Motorola had
with delivering the 060.
Compared to other TOS-platforms the 040 gives the system a lot
of faster "taste" than previous CPUs - remember: you work with
a TOS-machine and we all know of the advantages of the small
OS compared to the "monsters" on the PC or even the Mac - so
I do not think I will have to explain them again ;)

- What about the 060-Milan?
It will be available early in 1998, maybe at the end of this year.
An upgrade for existing machines will definetely available and
you will not have any advantages (price or whatever) if you wait
for the Milan 060 - upgrading the M040 will not be more ecpensive!

- Why did we choose to go on with the 68xxx-line before moving to the PPC?
Designing a PPC-based Milan is not the hardest part. You have to develop
a completely new OS also!!! And thats not all: if the existing applications
should have real advantages from a PPC they would have to be re-written
or at least re-compiled for the PPC - otherwise you do not have any
advantages at all. A 68k-emulation on a PPC would be much work with
maybe a slower result than on a 060.
We actually do not think the market is strong enough for such a project
at the moment. Just think of the problems a similiar market, the
Amiga-market, has with developing applications for the existing
PPC-cards. They just do not seem to exist (as an Amiga-fan I am very
sad about that, believe me!).
So the main goal must be to strengthen the existing applications
with a machine that runs them at top-speed before moving to other
projects.

- When will an English website be available?
Never. No, just kidding ;)
But this really gave me some hard time in the past - because the

people who wanted to translate worked much slooooooower than I
expected, but this week things are really coming together and I hope
to see some results ... please! ;)
Sorry to our friends here and thanks for your patience and your
massive support - everytime I get some international mail I just
wonder how you guys understand a word ... are some of you learning
German out there??? ;)

- Software
That is nothing we can push but a lot of people are already very
interested in developing their software on a Milan. So I think
we will see some surprises in the near future.

Once again, thanks for your support.

4497. Archive utils question...

Newsgroup: comp.sys.atari.st
Date: 1998-08-13 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <6qv459qdf1@news.campus.mci.net>
Source record: 95301

I've got a couple of questions...

I've been using the ZIPJR.TTP program from the ST-ZIP 2.6 archive for several years now, and I've got it installed as an app so that any .ZIP file I click on is auto-extracted to the directory that its in. Now, after years of great performance, I'm starting to get a problem. More and more .ZIP files that I d/l off the Internet will not unzip. They quit, with the message "No files". I can go to ST-ZIP itself, and it will find and extract these same files. Anybody know whats going on? Is it the person who created the file causing it by compressing it in some unusual manner?

Also, about .TGZ files. I've got GZIP.TTP and TAR.TTP. I have them both setup as apps as well. I can click on a .TGZ file, and I wind up with a (bigger) .TAR file, so I'm assuming this is working. Now, with TAR.TTP, I can click on the *.TAR file, but it always tells me it can't locate that file. I've tried just about every option thats listed when you do a "--h" for help. Anybody know the appropriate command to make it extract the .TAR files after they've been converted from .TGZ to .TAR?

Thanks in advance for any help! ;-)

What about Linux ? I don't see much multimedia products for Linux. So, why do people dream about it ? Even for mac, there's only few games, multimedia cdrom you're talking about.I think you've missed the point : that's not the reason why people don't want a pc, and that reason is why Milan will be a success.

Frustration what is that?
Really I don't miss these fancy CD-ROM's. Besides the most of then are
just curiosities.
One thing my boy will never be allowed to do is playing games one the
Atari's of mine. It's my believe that Atari's and clones aren't made to
play games. Furthermore I can't stand the dreadfull sound they are
producing. After five minutes Mario Bros (and the likes) music I'm ready
for the psychiatrist.

If he really wants to play I will buy him a Playstation or a Window$ cookie
box.

>access and CD-ROM encyclopedia access ?!

Yes I don't use the web very much (and CD-ROM encyclopedia) for this because:

Primo: it's too slow
secundo: I hate to read doc's on screen. The same goes for hypertext
manuals. I really dislikes these things.
If I want to read I want to do that in a cozy armchair, sipping a glass of
wine and not in my always overheated computerroom sitting on an
uncomfortable chair.
>
>Don't go blind Martin ... these things really exist you know ;)

Yes I know. The market is really overwhelmed with these toys.
I always try to use the latest technology but new technology doesn't mean
always that things are better of so.

> able to see the disks and the trash. What could be the problem.

Before disassembling the entire computer, make certain the keyboard cord is firmly seated at both connections (keyboard and computer connection). Check both connections for corrosion, then try a new cable. Those are the easiest things to find and correct. If that doesn't help, you might have a bad keyboard control board (there's a small control board inside the keyboard case with a chip controller as I recall). You could also try another keyboard (if you know someone nearby with a ST, MegaSTe, or TT030 which all share interchangeable keyboards).

> Also does anyone have a Megafile-supply. Mine is done...

If you mean the internal power supply, I'm certain I have a used one lying around the service bay; may even have a new one if you'd prefer to spend a lot more. ;-) Let me know.

Hi Thomas,

sure glad you jumped in just here! Actually, the 060 will be in the market for me next year or so... Right now I got this TT with a Matrixcard, running MagiC, NVDI etc. and I'm glad I got it. Even a memory upgrade up to 64 Mb is being (re)considered, I ordered already but helas! Aixit was working on the boards for the Milan before starting producing the new TT boards.... that'll mean I gotta wait some time. In the meantime my money was refunded and right now I still haven't decided to put this off the shelves or not.

A Milan 040 is not my choice, even if it won't cost me more buying a 040 first and upgrade to a 060 later. I have got some time to let the whole project "mature".
In fact, there are 3 possibilities: a Hades 060, a Milan 060 or a Phenix 060, provided the latter will see the light. What it eventually will be, depends on many, many things. The OS, for one thing. I'm not going back to a singletasking one, so MagiC or something similar (pre-emptive, that means) must be available. Then NVDI must be available, perhaps with the combo driving my existing card (if VME adaptors are accepting my TC1208, that would be another advantage). Also, (future) projects for Pentium PCI cards could be a deciding option.

I agree with your opinion about a PPC system, it would mean "throw away your old apps", like with the MAC OS 8 stuff: upgrade all your software or stick to OS 7... not my cup of soup.

Speed: it definitely is being considered, though' I'm not the one who needs Top Speed/Formula 1 speed/hilarious speed/ridiculous speed etc. I said before, I'd like to sip some coffee while working or smoke a fag every now and then, hence the time to be able to do that is welcome :-) Let the PC owners do the racing, please.

Well, what else can I say? I sure hope the Milan keeps on going to make it, the start was there, now let's wait for the rest.

I'll keep an eye (or two) on future development.

CU NeXT msg,

4510. FS MEGA ST4 & TONS of software

Newsgroup: comp.sys.atari.st
Date: 1998-08-13 00:00:00 UTC
From: wfchris@aol.com
Message-ID: <1998081320080900.QAA20044@ladder03.news.aol.com>
Source record: 95314

Here's what I've got:

Package Price: $400 (US)+freight, or best offer. Inquiries should be directed to: WFChris@aol.com

The package includes the following:
Hardware
1 Mega ST4 & Keyboard
1 SC1224 color monitor
1 monitor switch box
1 mouse
1 joystick
1 MouseMaster switch box
1 ICD 44 mb Syquest drive
1 SF314 external floppy drive
1 Cannon BJ10e bubblejet printer
1 Supra Modem 2400 (ok, its not very fast, but it was good enough for GEnie)
and, of course, the various and sundry cable/cord necessary for all.

Software
Applications:
Calamus v 1.09.6 & 1.09N
Flash
Clean Up ST
Word Perfect
Degas Elite
Data Manager
Word Flair
and various utility programs such as NeoDesk

Games:
Maniac Mansion
Empire
Star Wars
Gauntlet
Warlock
ArcticFox
King of Chicago
Thunderbirds
SimCity
Ancient Art of War in the Skies
Steel Empire
ShadoWorlds
Balance of Power (1990 ed)
Rorke's Drift

Railroad Tycoon
Storm Master
Populus
Power Monger
War in Middle Earth
Defender of the Crown
Lemmings
Hitchhiker's Guide to the Galaxy
F-16 Combat Pilot
Star Glider
Jeanne d'Arc (in German)
The Secret of Monkey Island
Autoduel
Hard Drivin'
Civilization
Realms
Their Finest Hour: The Battle of Britain
Frontier: Elite 2
Thrid Riech
Pirates!
and Chronoquest.

>people dream about it ? Even for mac, there's only few games, multimedia
>cdrom you're talking about.I think you've missed the point :

I think we don't speak about the same topic : on Atari we are missing
one of the best things : multimedia software often on CD-ROMS ...
This is a FACT ... not a supposition.

>that's not the
>reason why people don't want a pc, and that reason is why Milan will be a
>success.

Milan is already a success for people who don't care about the cd-rom
problem ... That's the point ....

Be aware that we stay marginal users with our platforms. I like to be
a marginal excepted when you loose so much about culture and
education, and don't forget one thing man ... you are french like me :
Atari CD Master hasn't any access to french CD-ROMS ... and my
childrens are really too young to be able to understand anything in
english ...

>Frustration what is that?

Something anybody will encounter at least one time in his life.

>Really I don't miss these fancy CD-ROM's. Besides the most of then are
>just curiosities.

Trying to flame any CD-ROM coming from the PC/MAC world is something
like "ignorance" rather than good argumentation I believe.

>One thing my boy will never be allowed to do is playing games one the
>*Atari's* of mine. It's my believe that Atari's and clones aren't made to
>play games.

They were in the past ... thousands good games were running on ST ...
But I think it's now a part of the past ... even on the Falcon you
will have to search a long time to find any good game ...
The latest were the ISHAR trilogy I think ...

>Furthermore I can't stand the dreadfull sound they are
>producing. After five minutes Mario Bros (and the likes) music I'm ready
>for the psychiatrist.

We don't speak about the same games ... I do like some really good
reflection games or adventure/role playing games ... not really shoot
them up or so ... though there are really good one on the ST in low resolution ...
don't try to make them run on Hades or so ... even on the TT it is
quite difficult to find one game running.

>>Anyone with any computer needs at some moment to play ... hm ... well,
>>I think ... :)
>
>I would rather play with something else:-)

You are also right by saying that ... I do like to play Mah-Jong, but
the real thing, not on a computer ! And, while we are talking about,
there is no full Mah-Jongg game available for our machines ... a pity
!
>>Don't go blind Martin ... these things really exist you know ;)

>Yes I know. The market is really overwhelmed with these toys.

Not all of them are toys ... I saw a real excellent "Art Nouveau"
CD-ROM on a PC, and believe me at this moment I was thinking:
"I will never be able to simply seat in front of my computer to read
this nice volume ..."

>I always try to use the latest technology but new technology doesn't mean
>always that things are better of so.

It's not a technology question ... Atari or clones do have excellent technology
but they are away from the world when speaking about educative,
culture, art CD-ROM ......
It's like to be unable to access any good library today ....

For me this is the only insolvency about our computers which I rather
like so much ... I own two TT and a 1040 STF ...

Maybe soon I will have to buy one of these alternative beasts to access
a new world of culture and multimedia pleasure.

From: ecncomr@socal.com
Message-ID: <6qvj74$8f1@enews2.newsguy.com>
Source record: 95319

Simple MagiC 5/MagxDesk question:

How can I change the MAGXDESK trashbin icon's name?

It's currently called (German) "PAPIERKORB", and I've tried assigning a new icon with an English name under it but that won't do it. It just keeps coming up "PAPIERKORB". And of course, unlike a drive or file icon, you can't "show information" and then type in a new name. I looked in the MAGX.INF file to see if perhaps the name was hidden in there somewhere, but didn't see it. Am I missing some obvious solution?

By the way, one little thing I find annoying about MagxDesk and ICONS in general:

With plain vanilla TOS 4, you could name a DESKTOP ICON (file/folder/drive/etc.) anything you wanted easily from the desktop (as you can do with MagxDesk). But under TOS, the name DIDN'T have to be in the 8+3 format (xxxxxxxx.xxx) and more importantly, it DIDN'T have to be the actual file name. Under MagiC 5/MagxDesk (unless long file names are activated) you are limited to 8+3, and if it's a FILE, then you have to use the ACTUAL FILE NAME only. So with MagxDesk, if I had an icon for POPwatch on my desktop, it would have to be called "POPWATCH.PRG". Under TOS, I could have named it "POPwatch 2.72" or "POPwatch" or just "POP", or whatever, and it didn't affect the actual file/name.

In other words, the DESKTOP ICON NAME under TOS was separate from the actual FILE NAME. Under MagxDesk, they are one in the same. Seems kinda limited to me...

Jo Vandeweghe a crit dans le message <35d3574a645011@ping.be>...

>
>It's not a technology question ... Atari or clones do have excellent
technology
>but they are away from the world when speaking about educative,
>culture, art CD-ROM ......

And graphics or video software, like those Adobe made for the Mac/PC
platforms.
That's the reason I bought a PC and hated the Falcon: the Falcon is only
good at running Cubase Audio (and even that: my audio outputs broke twice in
one year - still under guarantee, so...)

As I wanted to make decent Web sites, retouch my collection of PhotoCD (some
early examples being available on my homepage - see below) and now I'm
beginning to make a video film, there's nothing AT ALL available on the
Atari scene (I mean: something really usable, that won't take 40s to load a
picture and 4mn to apply an effect).

I like the PC for its versatility... and global value for money (!).
Having paid 7,000Ff (US$1,200) for an MK-X Falcon, I've been glad to pay the
double for a machine that works 30 times faster and includes a 4.3Go HD and
a 24x CD rom drive (two things the Falcon doesn't even have fitted in as a
standard).

So, I still consider that my purchase of the Falcon is a theft, due to the
propaganda of those "independentists" who spend their time spitting at the
PC platform instead of working positively.
That's also the reason why I shall never buy a Mac, because I see the same
process happening: though the performance are there, certainly, you don't
buy a computer: you buy a computer-maker's brand.

I know these words won't please most of the people who debate on this
newsgroup, but I think I paid the price to express my opinion here (exactly
11000Ff, the price of the Falcon and all the hardware add-ons I had to buy
just to get a not-too-crappy-outdated-and-useless Atari-compatible
computer).

A la prochaine !

> depends on many, many things. The OS, for one thing. I'm not going back to a
> singletasking one, so MagiC or something similar (pre-emptive, that means)

As you might know, the Milan comes with the Milan MultiOS (based on a new
N.AES-version) and the new TOS 4.5 - the MutiOS is a multitasking-system,
very stable and very flexible to adapt on forthcoming machines.

> must be available. Then NVDI must be available, perhaps with the combo

NVDI 5 already works fine on the Milan - this new version doesnt make
any differences between a plain Atari and a machine with GFX-cards.

> I'll keep an eye (or two) on future development.

Nice to know :)

The sky is blue, the ocean is green the skins tanned by the sun ...
But maybe not ?

We have a solution. As we're just humans we can't interfere with the elementals, but
we can enlighten your daily life.

Digital Lab 1.10 is available !

Faster, with several effects and new features, in French, English or German language. Touching
up picture has entered a new era. Only the price hasn't changed ...

The demo version is available on
http://perso.club-internet.fr/f_bayle and within one week
on http://www.epita.fr/~da-cun_e .

Fri¿½di¿½ric Bayle & Eric Da Cunha.

Well, I too have had these problems. I'm running NEWSie on my Falcon / MagiC 5 using ICD 6.5.5 HD software. I also run Diamond Edge, and it reports several errors on the partition I use for newsgroups / e-mail. Fortunately, it fixes the problems, and nothing terribly bad has happened.

And I divide my .GRP files into a few separate files (different categories), and I've had them get corrupted when there was trouble with the server, or something similar. All the group names turned to unintelligible garbage. But I keep backups of my .GRP files for that very reason.

And another little problem with NEWSie: I do get some "non-existant & undeletable files when EXTRACTing MIME / UUD encoded e-mails or newsgroup articles (ie. .JPGs etc.). Diamond Edge does nothing for these, and the only way to get rid of them is to wipe or zero the partition and start over. I've heard Charles Silver mention these "strange files" before, saying that it is UUD.TTP that causes them, and that by using only MUNPACK.TTP, it won't happen. But, MUNPACK.TTP doesn't work (for me) with a lot of encoded articles / mails.

Anyway, you're not alone with you NEWSie / HD troubles!

From: ecncomr@socal.com
Message-ID: <6qtb8i$sms@enews2.newsguy.com>
Source record: 95374

On 11 Aug 1998 23:34:05, Frankie Deschacht wrote:

>Sometimes CAB works fine, but when I download multiple web sites in one
>session, or one very long web site then things start to happen.
>The most common problem is me getting the dreaded bombs and the well
>known proverbial crash.

Oh yes. I remember using CAB 1.5 with STiK - the crashes were the most reliable feature of that combo! You could almost point your finger at the screen and yell "crash", and it would! RUNTIME ERROR city! I remember switching to STinG (still using CAB 1.5) and having it work a lot better. But 1.5 is very buggy just the same, and _much_ slower overall than 2.5 (and beyond). I haven't tried the 2.7 demo version (I bought the commercial 2.5 - using it with STinG/PPP). If possible, I would suggest trying 2.7 ;^)

> Sometimes on quitting CAB I get a whole row of bombs and the system jams up.

Yes. I rmember this as well. I have no explanation for you though.

>It also looks like the program goes round in circles before it displays
>anything, I always see it is loading the same size of data (or is that a
>coincidence ?). When I used a dialog box during loading it displayed errors
>almost constantly, the most frequent ones being #147 and #148 (what are they
>?)

Hidden code words telling you to _not_ use 1.5 <hahaha>
Seriously, all these things you are pointing out went away (to some degree) with STinG (even using SLIP), and the ones that hung around didn't occur as often. And with CAB 2.5, they almost all disappeared.

>Then for the cache : My setup is as follows : Image cache 2560 Kb maximum,
>keep free 256 Kb, Internet cache drive M, folder 'WWWCACHE', 2 Mb
>maximum, keep free 1 Mb.
>After using CAB and looking through the cache on the ramdisk (CAB fills
>WWWCACHE on boot up with folders named A-Z), there is hardly anything
>in there (if anything at all), I thought CAB dumped everything you downloaded on your
>hard drive (ramdisk in my case).

Probably because CAB deletes parts of the cache as it fills up. If you've done a lot of browsing, then your (small) cache would have filled up - and been replaced with the most current data that came in. And if I remember correctly (I try to forget!) CAB 1.5's cache was set up a lot different than later versions (with their multiple "A-Z" folders and such).

> Finally : How could I improve and enhance the graphics (certain monitor,
> graphics card or what ?), atm I work in med resol. ie.640X200 pixels.

Not much you can do with your current setup. CAB 2.5 allows "half-height in ST MED". I haven't tried it, but it apparently makes ST MED in CAB look a little better.

>Well, I hope someone will have the courage to go through my essay and
>help me solve some of the problems.
> I realise I should get a hard drive ASAP, but until then I think some problems
>could be solved.

Yes, a hard drive would _really_ help for many reasons, but 1.5/STiK is still going to crash just as much. You might have better luck with you cache, but that's about it.

> I usually hate to admit defeat,or has the time come to upgrade to a PC
> (I mustn't think of it).

I felt this way for a while (with regard to doing the Internet on an Atari), but CAB 2.5 / STinG / POPwatch / NEWSie / MagiC changed my mind.

I have Infopedia 2.0, ufo and some other titles, this is a great
effort to allow us to access a little multimedia CD-ROM sample from
the other computer world ... but what about the rest we are really
missing ?
This is a really good way to allow us to access other platforms dedicated
multimedia, but it takes so much effort that it will not be a real
solution forever ...

Animation work perfectly since ... hm ... I don't remember which
version exactly ... I get this version from Nima himself at the latest
Neuss Atari german show in last October.

Or he could get hold of Marcel (for the ST). It will read 1st Word
format files, which it can then export as RTF. M$ Word can import RTF.
Much of the formatting will be preserved this way.

Aside from the ideas others have mentioned, two other ideas come to
mind ...

You could download an atari word processor for her that does export a
format you can make use of with your mac word processor. There's a
shareware one called Marcel which will export RTF for instance.

You might consider investigating the MagiCMac demo so you can run
atari software and perform the conversion yourself.

I agree that the Afterburner is pretty competitive compaired to the
Milan (specs), but add the cost of upgrading your Falcon with the A/B,
Nemesis, NOVA video and a new case, and the Milan is pretty attractive
for others that want to upgrade from the (M)ST(E)/TT line up. I'm
happy as heck with my Falcon. I finally have an Expose that works
(after spending about $1000.00 on non-working units:(
I don't understand why the developers
of the T-060/Hades-Milan haven't bothered to write drivers for the
PCI digital video capture cards that are available. Most cards now
have onboard MPEG compression, so other than streaming the data to the
harddisk and a preview screen, it dosen't seem to be some impossible
task. If such a package existed, it would surely be an alternative to
using a Mac for DTV, and with the addeded benifit of being one of the
premier DTP machines, might actually make the Milan or Hades
manufactures some profit.

Just my 2 cents worth.
Mike

Well, I know for sure ATY is still in existence. ATY is also now the OFFICIAL
North American Distributor of NEMESIS / VIDELITY (in case you care).

ATY Computer
320 10th Street, Suite 130, Oakland CA 94607
phone +ACY- fax (510)836-2309
email: atycom@infinex.com

http://www.virtual-markets.net/vme/aty/

=====
As far as BRE. I remember getting a catalog from them a long time ago, but
I'm not sure if they're still around. Try a search on the web.

=====
I used to buy lot's of STuff at Computer Games+, but I haven't been over there
in a couple of years, so I'm not too sure about them.

Computer Games+
1839 E. Chapman Avenue
Orange, CA

(714) 538-1234

=====
I don't know about the last two. I remember seeing something about Bolt's,
but I never went there or talked to them.

=====
Anyway, I hope that helped a little!

I had an EZ135 (external SCSI) hooked up to my Falcon for backup purposes for a couple of years, but it recently started _not_ loading cartridges. It tries to spin them up, and after about 5 unsuccessful attempts, spins down and ejects the cartridge. Some carts work better than others too. Anyway, I called SyQuest to ask about a "trade-up" offer they used to have (where you trade in your EZ135 for an EZ Flyer 230 and they give you $50 off the price). But they weren't doing that anymore. So, I went down to my local Fry's and got a new EZ Flyer 230 for $149 (SCSI / external). The parallel port versions were a lot cheaper, but useless to me. So far it's working very well, and I (of course) can still use my 135 carts with it.

Not really relevant to SyQuest's economic position, but what the hell! ;^>

Well I would just go down to the Federated Group and pick up a new Atari
Mega ST...(just kidding :) (I still have my reciept from 1988!)

Has anyone else thought about porting(re-coding)Oids to Windows?
Any PD source for these games?

Coolest Atari ST Games:(at least I think so)
1) Arkanoid
2) Oids
3) Star Raiders (I guess this is a pre ST game, oh well)

You'll want to attach Red, Green and Blue and H-sync and V-sync to the Scart inputs. The Audio could be sent out to 2 cinch sockets or to the SCART.

> Also is it
>possible to run hi res across the SCART (being able to retire the monitor

Nope. A TV can't handle the mono frequencies.

hi again. Actually right after the release of 1.5. I noticed that the
HTML export was broken. (typo in the code :) This has been corrected
in 1.6 now available. Some other things have been optimzed, like http
fetcher for HTML documents as well. And More debug messages in
BLACK-BOX.

Funny But sting last menu, (the enviroment one) never worked at all.
I did save, and save and accept and save again over and over. NOTHING
I can do to set those at all. So I needed to set them manually.
Any explanation?
The rest works fine btw in sting. Just this damn env menu.
bye.

Hi Stephen, thanks for taking up your time
to answer my newbie questions.
The .ST and .MSA are disk images formats used by
emulators like PacifiST and WinSTon. So each file has
a image of a Atari ST diskette. What Iï¿½d like to do is
to somehow put the whole image file back into a ST diskette,
so I can run it on a real ST machine.

Thanks in advance
Gabriel

Hi.
Your answer seems like pretty reasonable and easy.
Does it work on images of bootable ST diskettes,
like demos or games? Because, in that case, is it not
necessary to copy the boot sector of the diskette also?
Thanks a lot in advance

No, that's not correct. There are Linux variants that do without memory management, and do work on 680000s. I have no idea though whether it's any fun to try with just 1 MB.

> I know someone who has a Milan as well as an Afterburner. He told me
> that the Milan is faster. He should know.

Yes, things that use the original Falcon-bus (mainly video and disk in
my case) will be significantly faster on the Milan. But in terms of
raw CPU-power I can't see how a 25MHz 040 with 25MHz 32-bit RAM-access
can compete with a 40MHz 040 with 40MHz 32-bit RAM-access.

I agree that a Milan will be faster in normal use (which is mostly
interactive), but for compiling, rendering and similar?

Anyway, my point wasn't that the AB/Falcon is a better buy (can you
even buy an AB today?) or a better machine, 'cause it's definitely
not! What I'm trying to say is that it's not the super-fast machine
lots of people think it is. Even though the GUI is fast and responsive
due to effective design and implementation, there are still things
that needs a fast CPU (rendering, image-processing, packing,
compiling).

The Milan is generally fast and nice (I really like the clean
PCI-design and the use of mainstream, standard components), but the
CPU is IMHO too slow. I'll definitely wait for the 060-version :-)

You have to use an emulator.
There are many, TOSBOX, WinSTon, PACIFIST, Gemulator.

Essentially, this allows you to use a PC to run (some, not all) Atari
programs.

Perhaps this is covered in the Quick FAQ.

4567. Docs for ECL Driver DP8516V / Schematics for TTM194 or TTM195

Newsgroup: comp.sys.atari.st
Date: 1998-08-14 00:00:00 UTC
From: Martin Schmid <mschmid@freeline.ch>
Message-ID: <35D47852.C3DCFD68@freeline.ch>
Source record: 95255

Hi everybody

Because my old monitor EIZO 6500 passed away, I bought a EIZO 6600 and screwed an ECL to VGA converter together.
Now, the result isn't that bad but I'd like to correct it a little. I need better documentation for both the parts used inside the TT and - preferably - the schematics of input circuitry the TTM194 or TTM195.

1. Has anyone documentations about the ECL driver DP8516V? National feels sorry about having NO info left about the device. It's all about the maximum current I can draw thru the inverted and noninverted outputs. I'm now using 1K resistors tied to -5V which seems to lead into reflections - quite obvious when 75 Ohm cables are terminated by 1K...

2. With the schematics of the input circuitry of the TTM194 or TTM195 as reference, it should be possible to make a better converter than with the AD5539 I'm currently using. Can anyone make a copy of the schematics?

3. Are there already solutions for the problem? I don't like to reinvent the wheel once more...

Regards, Martin

I'm (sadly) aware of that.So, what about doing a hack of some intersting CDROM, just for us : let's download a .prg that will use datas in a multimedia CD (and only one). For exemple, I know that Microsoft Encarta98 is very good. What is it ? only lots of text, illustrations (gif ? jpeg ?). It runs only on w95 because of a small .exe ! Let's do a encarta.prg for us to read that cd ! I'll try it ... soon ;-)

4571. MultiMedia CDs: (WAS: hacking multimedia CD ? (was: Who'll buy Milan?))

Newsgroup: comp.sys.atari.st
Date: 1998-08-14 00:00:00 UTC
From: Nima Montaser <nima@nortel.ca>
Message-ID: <35D482BE.76F@nortel.ca>
Source record: 95259

Hi,
We actually have a great Encyclopedia on CD-ROM which works well
on ATARIs. The latest version of the Infopedia v2.0 driver for ATARI
allows access to:

- 26 Volumes of Funk & Wagnell's encyclopedia, with full access to text,
graphics, sound and animation. Texts/Media are linked so you traverse
through related material very easily.

- Roget's 21st century thesaurus
- World Fact book
- Dictionary of Quotations
- Biographical Ditionary
- World Atlas
- Timelines.

The interface is very similar to the modern Windows95 version.

This is whole alot of material, BTW.

Also, there is UFO, SpaceMissions, Time Magazine Almanac,
Total Health, body & Mind, Pharmassist & World War II that
ATARI CD Master allows accessing.

There is quite a bit of Multimedia stuff, 1/1000th of what
there is for other platforms, but we basically have some of
the basics covered.

The only deficiency is the fact that it is all in English.
We are working on one Encyclopedia for Germany, and maybe
French.

For more information, contact Homa Systems House or visit
the newly updated WWW:

I'm not sure I have perfectly understood your question: do you want to run ST programmes on your PC, or do you want to read, on your ST, files that come from a PC hd ?

In the first case, my favourite emulator is TosBox, that is very stable and runs most of the ST software except the games. Go to http://lgd.fatal-design.com/ to find all you need there.

In the second case, you need an HD driver like CBHD (which is freeware) and a Gemdos translator called BigDos.
Both can be d'ld from any Atari archive like ftp://ftp.lip6.fr/pub/atari .

Of course, the PC disk must be SCSI, otherwise you can do like me: using an "old" SyQuest EZ drive to exchange data between the PC and the Atari.

>I use "Optimizer" to defrag regularly. If you have some files that can't
>be decoded with munpack.ttp, send me one to test.

You don't say how you defrag. Just one word of warning: I had problems
when my defrag program was set to optimise for writing, because this
moved all existing files to the end of the partition. This was on a
relatively slow EZ135 drive, and I found that the heads couldn't
really move fast enough between the FAT/directory and reading the
existing files when the downloaded scratchpad was splitting, resulting
in corruption. Defragging optimised for reading cured the problem -
the heads didn't have so far to move across the disk, I guess.
Note that on the Atari, Diamond Edge lets you choose which way to
optimise, but OPTIMIZER.PRG *only* optimises for writing, so should not be
used (at least with slow disks) for anything involving repeated short disc
accesses (such as splitting scratchpads).

Regards
Peter

Hi Frederic,

maybe the sky was more overcast here: I just visited your site, but all I saw was Digital Lab 1.05 and Diapo 1.10 (which wasn't available actually, but v. 1.11 should be out shortly).

The only thing I noted was a Parx.sys from June '98...

BTW: do we need an updated Parx.sys for DL 1.10 too?

4577. Help needed with 1040STe

Newsgroup: comp.sys.atari.st
Date: 1998-08-14 00:00:00 UTC
From: asiufy@uol.com.br
Message-ID: <asiufy-1408981730220001@200.229.243.52>
Source record: 95265

Hi

I just bought an 1040STe, with the monochrome monitor, and I got
several problems to solve now:
First, the mouse is pretty screwed. The ball-bearings inside are
pretty worn, and dirty too. I wonder if there's anything I can do with it,
or if I'm better off buying a new one. If I need to buy a new one, where
from?
Then, the monitor problem: in order to get the colour modes, I
plugged it to my TV, via the built-in TV modulator, but as you might've
guessed, the image is crappy, full of interference. My TV has composite
plugs, so I wonder if there's a way to hook the ST using the composite
inputs... If that's not possible, I wonder if a regular VGA-to-RGB cable
can be bought easily...
Thanks!

Bravo!

But I still get a 'transaction failed' error when sending e-mail through my Dejanews account. Nonetheless, the mail does get sent even though CAB says otherwise.

Ironically, I made one test post a few weeks ago from Dejanews to this newsgroup and I've already received spam on what's supposed to be a spam-free Dejanews account. Because of this, the interaction of the cab.ovl with Dejanews isn't as important to me now. Still, Dejanews' mail functions provide a good environment to test each new overlay beta.

I've just had dozens of "Bad file handle" messages flash up when Newsie started to play up, getting dozens of zero-content files: pressing Esc, Disconnect or Quit would not stop it, only MagiC's kill facility, which of course means you lose what hasn't been saved first.

From: brian@tos.pl.net
Message-ID: <EKN1C3Q@tos.pl.net>
Source record: 95328

I am having difficulties contacting C-LAB in Germany.

I am hoping there is someone reading this group who can telephone them for me to ask them to contact me urgently.

The telephone number in Germany is:

0049 40 69 4400 40

Would you tell them Brian Becroft from New Zealand is having crashing problems with Cubase Audio and wants to talk to them in order to find out how to fix these problems.

Ask them to contact me at: mb@tos.pl.net

This is a matter of some urgency, so if you can ring them or know of someone who can ring them please help me out as we are desperate to contact them.

We have already sent a FAX and email to C-LAB but have received no reply.

We are having terrible problems with several C-LAB Falcons. They crash when editing the Audio in the Audio editor.
If you have a Falcon running Cubase Audio, or know of anyone who does, please contact me.

Also, if you know anyone at all who has a technical understanding of the Falcon, please ask them to contact me at the same email address (mb@to.pl.net).

We have found our several C-LAB Falcons to be virtually unusable for a while now and we are at breaking point...

Absolutely any help from the Atari community would be greatly appreciated. Please reply at your earliest convenience.

MAGXDESK picks up the names of the desktop icons from MAGXDESK.RSC in
your \GEMSYS\GEMDESK folder. With a resource file editor you need to
open the second tree in that resource file and there are prototype
icons with the names attached. Change then to your heart's content.

>waiting for a reply.

I did try this Nail search myself, with the same results.

Something makes me wunder, why is it, that one of my trackers shows
a visitor with CAB/02.70 as the browser. Didn`t say anything about
the OS or what OVL file, but it will not show mine. I`m using
CAB 2.7 , I-Connect and the OVL file that came with it.

It doesn`t really mean a thing, but I just thougth it might promote
Atari and TOS/MagiC a little.
If nobody ever see it, how are they suppose to know about it?

cheers

Joergen

Emulation is never 100%. There are some games that will not work under
emulation, just like there are incompatibilities between Atari machines.

If you want 100% emulation, get a REAL ST for next to nothing.

Absolutely not.

I've never heard of Canvas, but NeoChrome and Degas were both commercial.
There was a hacked Neochrome Master that alledgedly was PD, but some people
have told me that it was actually pirate.

Anyway, there are much more powerful graphic tools available as shareware or
freeware nowadays.

The English text follows the French one.

V-TRAX est enfin DISPONIBLE !

Vous pouvez ti¿½li¿½charger la version di¿½mo sur notre site internet :
http://www.emi.u-bordeaux.fr/~ricard/

V-TRAX est le logiciel de montage audio multipiste sur Falcon. Il permet de
gi¿½rer jusqu'i¿½ 32000 pistes virtuelles et autant de piste ri¿½elles qu'en permet le

hardware..
Sur Falcon, vous avez droit i¿½ 8 pistes ri¿½elle parmi 1024 virtuelles. En
clair, le montage s'effectue sur 1024 pistes mais vous ne pouvez en i¿½couter que
8 simultani¿½ment. Bien entendu, vous pouvez ri¿½aliser des "mix-down", c'est i¿½ dire

mixer en temps ri¿½el 8 pistes sur une ou deux pour la sti¿½ri¿½o.

Pour un descriptif complet, venez sur notre site Web.
Pour le commander, contactez notre editeur :
CENTEK
4 Av. St Exupi¿½ry
60180 NOGENT S/OISE
FRANCE
Tel : 03 44 74 63 30
Fax : 03 44 74 63 40
e-mail : phenix@centek.fr

V-TRAX is finally AVAILABLE !

You can download the demo version on our internet site :
http://www.emi.u-bordeaux.fr/~ricard/

V-TRAX is the Audio Editing Station on Falcon. It allows to manage until
32000 tracks
potential in a timeline and so much real track that allows the hardware..
On Falcon, you have straight to 8 real tracks among 1024 potential. In
clear, the montage undertakes on 1024 tracks but you can listen only 8
simultaneously. Of course, you can realize a "mix-down", it is to tell blender
in real time 8 tracks on one, or two for the stereo.

For a complete descriptive, come on our Web site .

Nope, I've checked exactly that when I read the first post. The server
returns "Content-Type: text/html" just fine. Anyway, if it did it wrong,
users of Netscape's Navigator/Communicator or MSIE should be affected,
too.

Ciao

> I get the message that its unable to find the file. Any help would
> be sincerely appreciated... ;-)

tar needs options to restore an archive. To extract all files, use 'tar
-xf foobar.tar' (or -xvf, if you want every filename displayed during
extraction).

With any decent desktop, it should be possible to install tar for
'*.tar' with '-xf' (or '-xvf', see above) as options.

If you're using MiNT and Gnu-tar, you may directly unpack .tar.gz
without manually calling GZIP by supplying the options '-xzf' to tar.

Ciao

Thomas

The STe should have the composite out. It is located on pin 2. The
ground is pin 13

pin layout from back of machine

4 3 2 1
8 7 6 5
12 11 10 9
13

I took a RCA cable cut off one end. stripped 1/4 inch of wire, tinned
the wire with solder and plugged the bare wires into the proper holes.
You can also buy RCA cables that have a plug on one end and bare wires
on the other.

Not pretty, but it worked for me.

Double check on the pinouts.

B.P.

Hi.

To all Milan-Users (Germany, Europe):

You find a TOS-Update for the Milan on our Website.
Among other things, it fixes the problems with the serial ports.

Note: This realease is only available for the Milan - you cannot (!!) install it
on other machines from Atari or compatible machines.

i know these are the *very* basics but hey they are often forgotten ...

1. thorough virus check
2. back up important data and reformat hard-disks
3. re-install CAF
4. check any elements of your system that you can on another machine

... good luck, shame on c-lab for poor after sales back up
jim

Hi bram, I am from Belgium too. currently living in the states, I miss my
good old ST4, just one question.. a Mega ST4 has 4 megs of ram. not 1 ;).
glad to hear there are still megaST users.

>I'll try it ... soon ;-)

one thing to also remember, though - there may also be some form of
compression used on the text files, or it may well be all one long text
file. That was one problem my friend Peter Zalesak had when
programming the SARA CD-drivers for a variety of different CDs - he had
some especial problems with the Groliers CD-ROM for the longest time
because it would crash on an STe (I was one of the beta testers for
that program). OTOH, he did a pretty good job considering that he was
doing it all in GFA Basic :)

> Is it possible to connect a pc monitor to an atari mega 4 ste?
>James

I think so. Here is a clip from ST FORMAT Issue 44 :

I have been given an Amstrad mono PC monitor ans I wondered if I could connect it to my ST. If I can, could you please tell me the connections and where I can get the parts to make the lead. I have listed the monitor 15-way D-socket connections for your information below

A:You have failed to provide us with the model number of the Amstrad monitor so this is inspired guesswork on our part. >>> It seems that the monitor uses composite video rather than seperate RGB signals. This means that the monitor only works in low or medres >>> The only connections the ST requires are video, ground, H sync and V sync, although the sync signals are not normally used with composite monitors

PC ST
monitor socket

15-pin D plug 13-pin DIN plug
Pin 2 video Pin 2 video out
Pin 5 selftest
Pin 10 Dig. grnd Pin 13 ground
Pin 13 H Pin 9 H Sync
Pin 14 V Sync Pin 12 V Sync

>>>> I advise you get in touch with an electronics shop who should be able to assemble the required lead, but without the exact model number we can't be more specific.

Warning : Never open up a monitor unless you are 100% sure you know what you're doing. We will not be held responsible

(Hope this is some help)

Message-ID: <6r3sb2$g0b$1@News.Dal.Ca>
Source record: 95285

I just enjoyed reading 4 issues (the Canadian re-print, from Toronto) of ST PLUS fanzine, the hard-copy version. I like it. This thread as above seems to be referring to the on-line version, as it were. Are the two one and the same?

Many years ago XEST newsletter existed as a Calamus document and in addition, all the articles from each issue were dumped as ASCII files and put on the NSACUG website (http://www.chebucto.ns.ca/Technology/NSACUG, if you must know, but nobody `hits' that site any more...)

But that really required a team of volunteers to keep everything current. I am now the only one working on XEST in any major way, and I am spending 100% of my energy in keeping up the appearances of the hard-copy newsletter. The website is getting severely mouldy, as nobody else in the club wishes to take it on.

Suggestions, comments, &c. welcomed. Also I am sorry for butting in to ST PLUS' thread.

John S. Gray
XEST newsletter editor

I posted this question before, but I didn't get any replies. Can anyone tell me how to correctly uncompress files that end in -tar.gz? (.TGZ).

I've got TAR.TTP and GZIP.TTP, that I've got setup as apps, and when I click on a .TGZ file, I wind up with a (bigger) .TAR file so I assume thats working. However, when I click on the .TAR file I get the message that its unable to find the file. Any help would be sincerely appreciated... ;-)

> a inexpensive/resonable replacement?

The MegaSTe and TT030 both share the same type internal battery. I generally keep them in stock for my Atari customers in case you can't locate one locally when the time comes to replace yours.

Message-ID: <35d9c265.0@199.79.146.67>
Source record: 95145

New at Systems For Tomorrow August 18th, 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Note: Systems For Tomorrow will be closed from August 20th through August 25th while we attend the World of Atari show in Las Vegas. For more information about World of Atari, follow the World of Atari link on our web site.

Crown of Creation 3D for Falcon030 $39.99
In the year 2060 the earth is in deadly peril. Two alien races threaten humanity. The only hope left is the newly developed LH14 space-fighter and you. COC-3D is a breathtaking true color space combat simulation that features outstanding Graphics, sound, gameplay and contols. Even has in film sequences. This is the best falcon game we have seen in a long time, quite possible the best ever! From RebelSoft.

Atari Computing Magazine #10 $9.99
Latest edition of Atari Computing Magazine. Includes: Reviews of MagiCMac 2, PixArt 4, SpeedoGDOS 5.7, ScanX, MIDIman, Suzy Bs v2 and Veloce+. Tutorials on Papyrus, STe sound programming, Hisoft Basic and the Team Tap. Plus all the usual Features and more. Includes Reader Disk. Subscriptions available. From Renegade Publishing.

ExtenDOS Gold for TOS Computers $39.99
The latest version of the best CD-ROM drivers! Now supports long file names, CD-R and CD-RW drives. Also now will save a CD-Audio track directly to your Hard Drive with most drives. We offer upgrades from ExtenDOS Pro for $25 with the return of you ExtenDOS Pro disc. From Anodyne Software.

CD-Write for TOS Computers $39.99
When combined with ExtenDOS Gold, and a supported CD Writer, this package will alow you to create your owen CDs! For Cubase Audio users this is a Must have! From Anodyne Software.

Falcon RAM card for Falcon030 $69.99
This Falcon RAM card from Germany allows you to expand your Falcons memory to 14MBs using an easy to find, and cheap, 16MB 72pin SIMMs. From WB Systems, makers of the Link 97.

Pinball Dreams for Falcon030 $9.99
This Pinball game for the Falcon isn't new, but the price is! Pinball Dreams features four tables of pinball action. It comes with both an RGB and VGA versions so it will work on almost all
~~~~~~~~~~~~~~~~~~~~~~~~~~~

falcons with a color monitor. From 16/32 Systems.

Desktop Solitaire 1.02 for TOS Computers $19.99
Eight Solitaire card games in a GEM friendly application. New version now supports most video cards in 2,4,16,256 and 24bit color modes. Also includes several bug fixes, and the abitily to redeal the current deck. Upgrade DTS 1.0 to 1.02 for free, or check out the new demo, on the Systems For Tomorrow web site (look under Kordes Development from the main page.)

HD Driver 7.55 for TOS Computers $49.99
Latest version of the popular Hard Disk software. Includes various upgrades and enhancements, including support for LS-120 drives. Upgrade HDD 6.x to HDD 7.55 for $24.99 with the return of your HDD 6 Manual and Disk. Update HDD 7.x to 7.55 for $5 with the return of you HDD 7 Disk.

Image Copy 4.1 for TOS Computers $49.99
The must have image conversion/viewing/printing program. Supports a wide varity of image formats, and provides high quality printing support for color inkjets. From FaST Club. Image Copy 4.0 to 4.1 upgrades are also available for $9.99.

Xchange for TOS Computers $19.99
Vector graphic conversion program. Supports the following conversions: Will convert EPS, AI, WMF or WPG to either CVG or OL. It will also convert CVG to EPS or OL to AI. From FaST Club.

Fonty for TOS Computers $24.99
This is a fully featured editing program for creating and editing Calamus CFN-format font files. Fonty features include: draw mode icons (Hammer mode, Pliers mode, Move mode, Select path mode, left and right kern mode), Grids and Guide Lines, Manual and Automatic kerning, Backgrounds for tracing (a Degas picture or a complete GEM font), a full feature Calculator to mathamatically manipulate fonts, and Window scaling. A separate program, PFB2CFN, reads a Postscript Type 1 Font file and copies it into a Calamus CFN font file. From FaST Club.

Scribble Synth for TOS Computers $29.99
This program is a software-based sound synthesizer. Scribble Synth is a true additive synthesizer, but with a difference, You actually draw in frequency envelopes with the mouse! The results are quite amazing. Strange Sci-fi Warbles, time-based pitch and filtering effects, plus frequency modulated sounds are all possible. From Electronic Cow.

EC-909 for STe/TT/Falcon Computers $39.99
EC-909 is an analogue drum machine emulator for the STe/TT/Falcon. It features sixteen origional TR-909 sounds with various controls. EC-909 can create single bar patterns in real-time, and then export them into your direct-to-disk recorder

or sample editor as AIFF or AVR format samples. From Electronic Cow.

Select CD For Falcon030 Computer $29.99
This CD contains the latest versions of some of the best Falcon specific Public Domain, Shareware and Freeware releases. Including games, demos, graphic programs, music programs, product demos and more. From floppyshop. **SOLD OUT, more arriving soon**

Sound and Stuff CD for TOS Computers $39.99
The Atari Musicians Toolkit. Includes hundreds of music fines in MOD, SNG and MIDI formats, Masses of superb quality samples in AVR format. including: Drum loops, percussion, synthesized sounds, acoustic instruments and effects. Lots of useful utilities for musicians. Music and audio programming information. A vast collection of MIDI and Sound related PD/Freeware/Demos/Shareware programs for the Atari. Complete version of Sound Chip Synth v2.32. From floppyshop.

MidiPlay $49.99
This is a player of MIDIFILE without additional hardware for the Falcon030!! It plays the MIDIFILE with digital sounds! Features: Play all the MIDIFILE following the GM norm * Up to 24 voices on an normal Falcon * Each channel have a dynamic polyphonic voice. * You can change the sound of current channel. * Function SOLO (play only the channel), MUTE (not play the channel). * Viewing of volume, information for each channel, bar, time, etc...

Digital Home Studio $129.99
This is a 32 tracks editor/player of audio/midi channel tracks for the Falcon030. With DHS you've got a editor of track, a sampler, a multi effect and an station of Direct To Disk! Features Include: Up to 64 audio channels (depending of your speed system) * For each track, you can programming anywhere in the music, the panning, volume effect, the volume, master volume, etc... * You can put or stop an effect anywhere in the music. * Up to 9 octave to replay audio sound or Midi sound. * Sound up to 50Khz 16 bits stereo * Up to 12 track in Direct To Disk (C.D. quality) * Up to 32 Midi Tracks * Mix audio tracks, D2D track and Midi Track in the same editor of track. * You can put a D2D file anywhere in the sequence * Digital Effects (Echo, reverb, flanger, equalizer, etc..) avaible on audio track or in the sample * Without quitting DHS, you can sample and work on sound (cut, copy, volume, autoloop, etc..). * Sampler avaible with Digital Effect (Reverb, etc..)

Expand $64.99
EXPAND emulates a Midi Expander on your Falcon030 computer. Loading audio sound, you can plays them even in D2D. Features: Play instrument like a Midi Expander * Use Audio instruments with multi-sample, envelop of volume, pan,... * Each channel have a dynamic polyphonic voice. * Use the 16 Midi channels * Understand

the most of Midi messages like program Change, Note-on (with velocity), Note-off, Pitch,Main volume, Pan pot... * A very good interface.

Live Machine $64.99
Live Machine is a D2D program for accompanying someone during a concert. Live Machine can be controlled by MIDI messages! For the Falcon030.

Also Available:
MIDI Arpeddiator $27.99 MIDI sequencer
Sound Chip Synth $19.99 Software synthesizer
Snippit Synth $29.99 Granular synthesizer
Atari Works $79.99 Easy to use home/office suite.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

I don't have much experience with .tgz and .tar files but try this...

gzip -d filename.tgz

then type

tar xvf filename.tar

...but don't quote me on that one. ;-)

Later,
Karl.

Hi Mish,

Unlike most who seem to have access to a PC as well, it's our only computer, well not strictly true but the Sinclair Spectrum and QL don't really seem quite up to it!

All I need now is a program with picture quality like Gemview, (I'm trying the shareware version at the moment) plus a default X/Y Setting of 100/50 to use with CAB in med res.

All the best

Trevor

4638. MAC Icons

Anybody- Help!

How do I extract/use a HQX file from the Mac world?
Is it some kind of archive file or what?

I found a lots of free icons on the

http://www.iconfactory.com

but most files are in this special Mac format, except for some samples.

I don`t recall any Atari apps that take care of this format?
Or am I wrong again?

Another thing, - is it my system or does any others have problems
when connecting to www.msnbc.com.
CAB crashes completely every time I try this site.

cheers

Joergen

You do not need any software for this.
The ST have the same format on diskettes as the PC.

Format disk in the PC to be sure it is correctly formated
as som versions of TOS did not format correctly.

There is a program called Starcall, it is a class 2 fax, voicemail,
terminal program, and mini BBS.

Also there is a program called Voxmail. You can find it on umich
archives.

You need a special kind of voice modem to use them.

Wrong Arabesque. The one I am looking for is Arabesque3, and it was described
as a pure vector editor, with no bitmap capability. I have Arabesque0, and
find it excellent for bitmaps and barely adequqate for vector. Have some
vector images that seem too big for it.

>still trading, no one can seem to get a response from Mike...

I saw Mike about three weeks ago. He has sold all of his commercial Atari software to Renegade Publishing Ltd. The Goodman's PD and Shareware stuff remains with him, whether he does anything with it is another matter. It would be a shame if certain titles were unobtainable in future.

Effectively, the Atari side of Goodmans has now ceased trading and the bank account is closed. Anyone writing/ordering with them will get a response and payment sent back from what Mike has told me. Most of the commercial stuff available from Goodmans is now available from RPL/Atari Computing - see centre page advert in the latest issue.

Kind regards

Mike Kerslake

that is the host card from atari, can be replaced by supra host
or icd host.

The reason for TAR.TTP not finding the file is because it seems to require
the *.TAR in the same directory as it'self. That's my experience with it
anyway, YMMV.

hi

all you need to do is drag any icon rsc file to your c:\gemsys\gemdesk\rsc folder, there the new icons can be read by magx, you can even use the TOS 4 icons there

:)

I don´t think there is a version 3 of Arabesque. Version 2 was release a
couple of years ago, but I don´t think the software is supported anymore.
Version 2 can be ordered from Valke Verlag in Germany. Try www.atari.de

Message-ID: <clHB1.138$3d.324331@news20.bellglobal.com>
Source record: 95233

OK, maybe goldmine is a bit strong. But still, there's a great deal of valuable stuff here.
All this stuff comes complete with the original packaging.

Atari 1040 ST
Atari 520 ST
Atari Megafile 30 H/D
Atari External Floppy Disk
Golden External Floppy for Atari.
Atari 1224 12" colour monitor
Atari joystick
Konix 500xl Atari compatible joystick.

There is also a 12" grayscale monitor, in its original box, but I have yet to unpack it to check the model #.
It also came with a great pile of original software with manuals and packagiing, that I have to go through.
The box for Hitchhiker's guide is complete with all the toys, and there is also a space quest, along with a whole shopping cart load I have yet to sort.

Will accept offers of cash or trades. Trade items I would consider would include current Mac or PC software, dirtbikes, camcorders. VCR's, yachts, whatever. Try me. I'm not looking for any more vintage computer gear, though.

Shipping is the purchasers responsibility. I am in NE Toronto, Ontario,Canada

I haven't much idea what this stuff is worth, but would appreciate it if anyone out there would like to let me know, to keep the rest honest.

E-mail me your offers and Tel. No's, and I will contact the highest bidders by Aug30th

Hi All,

Call into my home page and get the replacement screen fonts for NVDi
they work great.

There named the same as the old ones so just drop them in and reboot.

Hi

You will have to use a mac to decode the HQX there was a program I
think floating around to de hex. I have a program to extract the icons
out of mac files and save them as gem rsc files email me and I will
send it to you.

Yes, Telnet is yet another internet protocol, just like IRC, NNTP (newsgroups), FTP, HTTP, etc...

Telnet is one of the first protocols, that lets you log into a machine, usually under Unix, in text mode, just like if you were on a terminal. What you need is a telnet client. I'm not sure which ones are available for the Atari though, sorry.

What kind of monitor ?

A VGA screen can supposedly display ST-high res only, and you will need to
build an adapter. There is a file available in the Quick FAQ.

I'm not sure whether there are any Atari suppliers in Brasil (as that is where your email suggests that you live), but you can try Best Electronics in California.

On the other hand, you can use a PC serial mouse in the ST's serial port with the appropriate driver. This is covered in the Quick FAQ.

> Then, the monitor problem: in order to get the colour modes, I

> Thanks!
>

The STE already sends RGB signals, not VGA. If your TV can handle RGB (usually with a SCART connector), then you can build an adapter quite easily. The TV modulator output is composite, and that's why the image is a lot worse than RGB.

Hi,

I have links to telnet from my Web-Site. I was told about them in advance, because I'll have to learn about that also. I'm going to Educationtogo, a school which I also have links from my site.

I know they are similar to gophers, and have a different Transfer protocol heading:

telnet://??
Oh, my Website is: http://www.adnc.com/web2/bkgarvin

I have a link to a major telnet directory that you can access from my Web-Site. I hope this has been of some help.

Message-ID: <CmMB1.1493$S45.2029509@nntpserver.swip.net>
Source record: 95150

jregan@idirect.com wrote:

> Is it possible to connect a pc monitor to an atari mega 4 ste?
>James

You can use an SVGA monitor with an adaptor cable (which is rather easy to assemble) to get a monochrome picture. Some VGA monitors _may_ work, but all SVGA (or multiscan, multisync or whatever) should work as far as I know.
Here's how you make your adaptor:

Atari (13-pin DIN) SVGA (15-pin HD D-type)

4 (Mono detect) 4,5,6,7,8,10,11

13 (Ground) -- " -- (short it to pin 4 in the DIN)

9 (Horizontal sync) 13

11 (Monochrome output) 1,2,3 (Red, Green, Blue)

12 (Vertical sync) 14

The trick here is that the monochrome signal is fed to all the inputs on the SVGA-monitor, which gives you a very nice monochrome picture. Even though the monitor in fact is a color monitor, you won't be able to see a color picture because of the construction of the computer (and the monitor). If you get your hands on a monitor which handles frequencies down to 15kHz, it's a whole new deal - then you should be able to build yourself a cable with a switch between mono and color (a little more complicated, involving a 4-way switch, but possible all the same). Just about no modern monitors go lower than 30kHz, so in most cases there is no other choise than mono - but since most useful programs (IMHO) are very monochrome, it's the best alternative anyway...

Good luck!

Which is wrong. STE Tos is either 1.06 or 1.62. 1.92 never existed.

TOS 4.92 was a beta version of the TOS 5.0 that
was to be released with the Falcon040. It was never finished, never
officially released, and ended up being leaked out as 4.92 on some FTP
servers. It is a pretty unstable developer beta version.

But what's the difference between the dial.scr and default.cfg in terms
of defining variables like this? I can assume it would be redundant to
have the variables defined in both the .scr and .cfg files? Evidently
there was some change in the way STinG worked with these two files, but I
could never quite grasp what the differences were. Somehow I think my
default.cfg has parameters in it that could be deleted since they're
already defined in the dial.scr. Perhaps I missed something in the docs,
but could you please clarify the roles of these two files.

4689. Best emulator for parallel-port?

Newsgroup: comp.sys.atari.st
Date: 1998-08-17 00:00:00 UTC
From: Ross McNaughton <rmcnaughton@unitrac.com>
Message-ID: <01bdc9f1$41dc4d60$c8031bac@ross>
Source record: 95160

Now that I have a rather nice PC laptop for work, one of the few things I still use my ST for is graphics printing using Imagecopy. However, it has a few limitations - having to copy the images to the ST for one, and also the fact that 4Mb is not enough to print even moderate-sized truecolour images, so I have to convert most of them down to 256-colours. So, my question is, do any of the emulators out there have good enough parallel-port control for me to use Imagecopy under emulation for printing?

Not quite, it's not a compression format, it's an encoding scheme
similar to UUencoding & Base64.

I wrote a tiny 68K Mac program that will convert Mac Icons in Mac
resource forks and ResEdit files into Atari Colour icons in an Atari
Resource file as editable by Interface and importable by Ease.

It runs on most Macs including under System 6 & 7 and the Spectre
Emulator.

I have posted it out into the big bad world it is called Icon-Vertor,
but you do need some sort of Apple Macintosh to run it on.

4699. Chaos on PaCifiST?

Newsgroup: comp.sys.atari.st
Date: 1998-08-17 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <35D872F5.2102@primenet.com>
Source record: 95170

Has anyone been able to run the game Chaos (not Chaos Engine or Chaos Strikes Back, but Chaos, the wizard fighting game with the weird samples) on PaCifiST? Or does anyone know how to convert Chaos to the .st format used by PaCifiST? Me and my roommate have been reminiscing about this game, but my ST is 1,000 miles away :(. I seem to remember it was a weird format too, like 902k or something. Thanks.

>If you want too I can send this util to you by email.

It surely does extract these *.hqx files from Iconfactory but I'm afraid
you can't do anything with the files. The TOEC_PK.HQX (Total eclipse
package) extract into 3 files:

total_ec.dat
total_ec.inf
total_ec.rsr (0 bytes)

I've take a look to these files with *look.prg* and I believe that
total_ec.dat is in fact still some kind of archive (total eclipse.sit).

BTW: if you download the preview.gif of the icons you can make with the help of
a resource editor like *Interface* or a Iconeditor and a graphic viewer like
Graftool, icons of these preview.gif's.
It's requires some work but this way you can do it.

Hi William/whoever,

```
yup, Telnet let you fiddle around in your ISP computers... Need it to change
passwords, kick messages off the system that cause problems, etc. etc.
Go to http://www.flinny.demon.co.uk/ then select "Downloads" and grab
TelVT102 from Boris Cahan... works great, even under MagiC.

>doors for good.

Well I'm sure that its not as bad as all that. After all it is the
holiday season!!

I'm a member of the Cheshunt Computer Club, and we don't have an
"official" meeting in August, although we are having one anyway at one
of our member's businessplace.

I do know that there are lots of Atari users in our area, that don't
go to our meetings. Why not try to tap into these Atari users, many of
whom may be musicians, perhaps by putting adverts in the local
newspapers or noticeboards? Maybe you could advertise in a music
magazine?

Theres some ideas to start with, but I'm sure you're worried about
nothing. I bet everyone is back in September!

Cheers!

James

Hi all!

Juast a few words to say that, as an Atarian musician, you could do
worse than place a FREE ad in 'The Mix', a monthly mass-publication
mag via e-mail (themix@futurenet.co.uk). This mag also has the
advantage of havinga cover-mount CD/CDROM every month featuring Atari
software and has an Atari page inside too!

3.99 UKP from your decent newsagent.

>When I bought it, there were only three disks.

I'll confirm that - 3 disks only in the official pack: Disk 1 the main program and RSCs as well as install.prg, Disk 2 the British dictionary and overlay, Disk 3 the British thesaurus. Presumably the US version had US dictionaries and thesaurus. It may be that some vendors added an extra disk with more printer drivers etc but this wasn't standard. There was also a 'Mastering AtariWorks' electronic guide available separately (commercial) from Spar Systems in Brooklyn.

>easy defragging. All in a laymen's terms. Other's can correct me on this.

Hi Charles!

Thanks for your comprehensive reply. You are right - I may have jumped to an unwarranted conclusion. I did *not* optimise the Cix partition that later gave me problems with Optimizer.prg but with Diamond Edge set to optimise for writing. I had assumed that, as this moved all the data to the end of the partition just like Optimizer, the problem would arise with that as well. I should have checked this first, specially as you say that it does not work the same way. BTW, how does Optimizer know which files the user uses the most?

Don't get me wrong - I like the program - that's why I translated most of the file into English; that is on Derryck's WWW page (as he mentions in an earlier message).

4719. Converting filenames with spaces

Newsgroup: comp.sys.atari.st
Date: 1998-08-17 00:00:00 UTC
From: outrider@lvdi.net
Message-ID: <35d8622e875f5070@lvdi.net>
Source record: 95190

Lately I've been getting quite a few, uh, files from Usenet, with spaces in their filenames. Not a problem, as MagiC's VFAT handles filenames with spaces quite well.

However, many programs do not. Therefore, I immediately rename all files with spaces in them, converting the spaces to underscore characters (e.g. "file name" to "file_name").

Unfortunately, this can be quite a hassle if you have a lot of files to rename, particularly if those files have several spaces in their filenames.

Would anyone be interested in writing a TTP program that would allow you to drag and drop a file with a long filename to it (or perhaps multiple files and/or wildcards), and have it convert the spaces to underscores? Perhaps you too could benefit from such a program?

I envision something like DJ Bolt's excellent utility that converts filenames to lowercase for you. I use that quite a bit, and a similar utility for converting spaces in filenames would make an excellent companion.

Hi, I understand your problem, However I think that this should be handled directly by GEMDOS. Your os should be clever enough, and even be able to convert filenames depending the settings of UNIXMODE env variable.
I don't know how magic handles that.
But here filename conversion is done automatically very well. No need of a special .ttp

Well I can't tell which one it is, it's just over 51,000bytes in
size. I couldn't try it on onelist, they are upgrading again and
have turned off the start a new list fuction. I did try for
yahoo, was doing the sign up for their e-mail, got to the very
last step and got hit with 3 bombs.

Now I have a uestion, I noted that these files are set for
loading into TT ram, should they maybe be set for ST ram?

I'm running an TT/030 4megs ST, 4 megs TT ram.

Source record: 95193

Hi, all, I've found the time to put my hands on the project, and so corrected the fkey function, and more important the nntp client.

I had the problem my newsserver does not accept the "NEWNEWS" command anymore, so I added a function to make NOS use a sequence of "GROUP" and "STAT i" calls to determine the atricles to request.

I do not upload this alpha version that is working ok on my system, but it is available if you ask for it, I want to finish the pop3 thing first.

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

> i forgot if the 41256 meant 1 bit or 4 bits.

The 41256 is a 256k x 1 RAM.

> there's 8 chips.

That's not possible. There must be another eight at least to fit a 68000's
requirements. That would give half a MB.

However if I recall correctly, there never has been any Mega ST with 41256
RAMs. So most likely, you got the RAM number wrong, and you really mean
the version organized in 4 bits.

If the machine is not modified, it's much easier to just look at the front
plate. If it says Mega ST1, it's 1 MB, a Mega ST2 has 2 MB etc.

Cheers Peter

No he's not. He asked for a tool to convert "file name" to "file_name"
which is a 9 character filename, so obviously the target filesystem uses
long filenames too. I do not know of any OS that assists in this kind of
file name conversion.

Several clients should be able to do that. Try Gary Priest's POPwatch,
Gary uses Demon as ISP, which provides a similar mail account scheme.
At least, he should be able to give more specific advice. IIRC his
address is gary@the-gap.demon.co.uk

I have the Telnet client, but I cannot log onto the server. If I dial the telephone number out in California, I can log onto the server. If I use my local ISP, I cannot log onto the server. It is a secure server. I would like to avoid the long distance phone calls from Florida to California. I know there has to be a way.

Thanxs again

B.P.

If you are using STiK/STinG for your connection the best one is Telnet VT102 (v2.02R) by Boris Cahan. It can be found at http://www.flinny.demon.co.uk in the download area.

>Why they gave the single-sided version a higher model number is something
>I am clueless about,however.

Because the "unformatted" capacity of the single-sided disks was 500 KB and the double-sided disks was 1000 KB (but all of our peripherals had 3 digit numbers). The 3 was for 3.5 inch disks, and the first release of each peripheral had a '4' in the third digit.

The same sort of marketing-speak that lead to an ST520 instead of ST512. :-)

Sorry, but in how far should the GEMDOS (be able to) help applications
dealing with filenames containing spaces?

Ciao

Thomas

4748. mail client question

Newsgroup: comp.sys.atari.st
Date: 1998-08-18 00:00:00 UTC
From: "C.A. Wiebering" <c.a.wiebering@ctit.utwente.nl>
Message-ID: <35D9699A.725EB14F@ctit.utwente.nl>
Source record: 95113

My Internet account is such that whatever name is given to the receiver before the '@', it will be put into the same mailbox at the host. For example, john@foo.bar.nl is delivered in the same box as jane@foo.bar.nl.

Is there a mail client that is able to seperate the two again by checking the name before the '@' and to put it in seperate mailboxes after downloading the mail on the harddisk of my Atari (in for example 'john', 'jane' and 'the_rest')?

Greetings, Kees.

```
It is already known that Win95 messes up the disks with it's long filenames
and directory structure. When problem occur, it's better to just go back
into DOS mode for copying files to disk and back.

In case you haven't visited the ST Informer site recently, there has been daily news posting for the last two weeks or so. That's right, daily updates! I didn't want to announce this until I saw how smoothly (or otherwise) it would go. I think I will continue to post daily news I gather if people give me some positive feedback (or the hit counter goes out of control on the site). Please send me your feedback and check out the web site.

<http://members.tripod.com/~stinformer/welcome.htm>

Also, please send me news tid bits of your own. Also, articles are needed. Thanks all for reading and viewing the pages.

Sincerely,
Scott Tirrell

Hi,

What I really want to do...is running programs on my Atari stored on a pc
-harddisk/cd-rom.....
I don't have SCSI, but ghostlink is able to copy and move stuff....by my
opinion it should be possible to run the stuff alswell.....but can't find a
program.....
I can try the option with gemdos......

Thanx,

Chris

>it's just over 51,000bytes

Heck! What's this? Dan hasn't produced an OVL of this size for AGES
since he took all the debug monitoring out. The recent ones are around
33-35Kb. v3.009 is 35068 bytes.

Well he is talking about an external ttp for filename conversion from
vfat/minix whatever to TOS partition. I answered that in this case,
this shouldn't be needed... By just copying the files from vfat into
TPS, the filename conversion should be handled automatically.
thanks.

FAX on the subject?

```
MiNT is Not TOS.

MiNT is a multitasking unix-like kernel for TOS. You can run it as a
text-mode OS, but it's better with a replacement AES such as N.AES, so it
can run TOS/GEM application under preemptive multitasking. MiNT was the
kernel below Atari's MultiTOS.

It's development continues today (version 1.15), and it gets more and more
unix-like.

Look for the KGMD distribution kit on ftp.funet.fi, and then the KEMD kit,
which replaces the german files with english ones. It will run quite nicely
on a TT, but you need a free partition to install it on.

You can find out which version you've if you click on the "about Cab"
menu. It must be an old version however. The latest beta release is 35.068
bytes. v1.2618 (TT030 version) is 51017 bytes.

No. This doesn't matter if your TT is in good shape. Loading into TT RAM
works much faster.

Unless you know someone with a Mac I'm afraid you can't do very much with
these icon archives.
As I said yesterday *xbin.ttp* extract these .hqx very well but AFAIK the
extracted files (.SIT) can't be used on an Atari.

Yep, I'm in Brasil. STs were never popular here, in fact, I don't
know anyone who had/has an ST :(

> On the other hand, you can use a PC serial mouse in the ST's serial port
> with the appropriate driver. This is covered in the Quick FAQ.

I did a little bit of cleaning on the innards of the mouse, and now
it's in a useable condition, though far from good.
What I did try the other day was to hook my Amiga mouse. They both
have similar 9 pin plugs, and since the machines were contemporary, I had
hopes, but alas, it didn't work... All I got was a jittery cursor.
Wouldn't it be easier to convert an Amiga mouse?

We don't have SCART (is that an european plug, right?), only yer
regular RCA plug for composite. Another posted gave the pinouts to build a
RGB-to-composite cable, and I think that's what I'm going to do, but I'll
need to find that damned RGB connector first (odd size).
I appreciate everybody's help, and your FAQ has been of great value!
There's something else I would like to ask: I noticed some games
boot into PAL mode, which makes my screen turn B&W. That's using the RF
modulator. If I used the RGB output (either to a proper colour monitor or
using the composite hack), would the output still be in B&W? Would the
screen flicker and/or lose sync?
Thanks!

There's unsit.ttp, but I'm not sure how well it works on the latest
Stuffit archives.

4767. Airbus 320/USA additional info

Newsgroup: comp.sys.atari.st
Date: 1998-08-18 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <903477028.17275.0.rover.c3adfca1@news.demon.nl>
Source record: 95132

Hi all,

not sure this is the right NG for it, but heck!, dump it somewhere.

OK, I know it's an oldie, this Airbus 320/USA version (wasn't it 93 or so when it saw the Light?) but I only got it some time ago, after flying all those years with the European version (yes, I do...!)

Gawd, I spent some time with this Euro one, sorting out what was there and what wasn't, because the docs were not 100% complete.

Well, the USA version is even worse for the docs... They miss a lot.
So I put up a file containing the missing info on my homepage (yessir, it's still under construction, so don't fall into pitholes etc.)

Therefore, Comrades Airbus Capitanos, fetch A321-USA.ZIP from my site and start Chapter II with Airbus USA.

Blue Skies!

CU NeXT msg,

```

> but could you please clarify the roles of these two files.

Gee, I thought _you_ would realize that STinG is more than just a dialup
package ? ;-)

There is stuff that is needed in the system, even if no Dialer is started
to establish the connection. Why use the Dialer if no modem is involved at
all ? Both Null-Modem and Ethernet links do not use modems, thus neither
need the Dialer.

DEFAULT.CFG is loaded only at boot time time though, and some of the parameters
must be changed anyway, like the name server variable, when a modem connection
gets dialed up. Hence the Dialer's ability to set variables afterwards.

The main reason to have two files here is the strict separation between
settings that effect the networking system as a whole (to be set in DEFAULT.CFG
since they must be there as soon as even permanent connections like Null-Modem
come up), and settings that are relevant only for a single port (to be set in
DIAL.SCR, as they are specific to the port the modem is connected to, but do
not apply to that other serial port with the Null-Modem to the second home
machine). The principle is weakened a bit by settings that need to be there
always, but need to be changed at dial-up time, like the name server settings.
This is the reason why some people (like me) would have a name server entry
in both files.

Mind the name : DEFAULT.CFG contains *default* settings that keep the local
networking going, until an Internet connection is dialed up.

Cheers Peter

Ok, then I'd suspect faulty html code. CAB used to have the habit of displaying
the html source if it could find some faulty code. Maybe the tag at the
beginning of the file was missing ?

Cheers Peter

4771. FS: SyQuest 88 MB SCSI removable hard disk system + carts REDUCED

Newsgroup: comp.sys.atari.st
Date: 1998-08-18 00:00:00 UTC
From: trevor@cyberspc.mb.ca
Message-ID: <YmnC1.10$hA1.9888@typhoon.mbnet.mb.ca>
Source record: 95136
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other,misc.forsale.computers.mac-specific.misc

SyQuest 88 megabyte removable hard disk system with 6 (or 7) cartridges.
Drive is in perfect condition and all carts have NO bad sectors and are
in perfect condition too. Rarely used - only used for monthly backups.
This drive can also read 44 MB cartridges. This drive is SCSI.

Comes with 14 day guarentee to be free from defects.

Bare drive with 6 carts for only $239.

Bare drive with 1 cart for only $98.

Carts separately only $38/each.

Possibly available is an external case made just for this drive.
Most likely $20 _with_ purchase of the above drive.

4772. FS: Winnipeg Atari ST User Group fundraiser blowout! REDUCED EVEN MORE!

GIANT ATARI ST HARDWARE / SOFTWARE / MAGAZINE / BOOK BLOWOUT!

The Winnipeg ST User's Group (STUG) is having a huge fundraiser to help keep our still-going-strong user group in good health, clear out some useful software that isn't getting much use, and help members do the same. The majority of the proceeds from all sales will go directly towards helping the club which has been promoting Atari since 1986 in Manitoba, Canada.

Please look through our list and pick out something you can provide a good home to. All hardware/software is fully guarenteed for 2 weeks from receipt. Everything comes with full email tech support from a knowledgable STUG member, we'll try our best to help you out!

If you want a whole bunch of stuff, discounts are available. Let us know what you think is a fair price. We just want good homes for all this STuff!

Every item purchased includes an issue of the STUG Chronicles (our newsletter) FREE!

All prices are in US$ funds as most sales tend to be to the US and so it makes everything easier that way. Canadian prices should be calculated accordingly.

Shipping is extra and NOT included in the price listed.

Thanks for helping out our user group!

Trevor Cordes - STUG President
trevor@cyberspc.mb.ca

I had this problem once, and on the advice of Best Electronics I got
a repair kit for rear window defrosters from a local auto store. It
contains a conductive paint. It was a bit tedious, but the repair
worked and the problem never reappeared.

>of a special .ttp

I don't follow you, Katherine. There's no problem with the way MagiC
handles spaces in filenames. They are perfectly legal under MagiC's
VFAT system and there are no problems as far as the OS is concerned.

The problem is when sending filenames with spaces on a command line,
the application takes the part of the filename before the first space
as the filename, with the rest being the argument.

For example:

this is a file name.jpg

would be taken by most applications as:

filename "this" with "is a file name.jpg" as an argument.

I don't consider that a problem with the OS, though I guess you could
make that argument (no pun intended ;). It seems more a problem with
plugging in a new file system with a old applications and an old way
of doing things.

In any case, David Bolt has once again come to my rescue and has
written an application for converting filenames with spaces! Props
to David for another excellent VFAT utility!

The new timeout keyword is great. I have mine set at 30, as I've never had it start downloading after the old counter got down to 90 seconds. Even going past 20 seconds elapsed is very uncommon, though it does happen occasionally if I'm doing a lot of background downloading.

Unfortunately, it still doesn't load a new page from the ShowStats site. I have to do a ^L to get an updated page. V1.3003 worked, but no other versions that I'm aware.

Nonetheless, I appreciate all the work Dan is putting into this. It's getting better all the time.

4777. QED 4.5!

Newsgroup: comp.sys.atari.st
Date: 1998-08-18 00:00:00 UTC
From: outrider@lvdi.net
Message-ID: <35da04aa73ae1a1@lvdi.net>
Source record: 95142

I just ran across QED 4.5. Lots of new goodies in this version, including non-modal dialogs, support for selecting multiple filenames in MagiC's non-modal file selector and support for binary files.

Unfortunately, a few bugs have been introduced. It no longer seems OLGA aware, and some of the hot keys don't work properly in the new dialogs (which is somewhat expected, given the big conversion).

Still, all in all, a great update. It was already a great program, but it's now really coming into its own as a premier, MODERN editor. Can't wait for the next update, which I would expect to tweak out the new bugs.

For those who can't find it, I have it up on my web site, listed below:

I am using ExtenDOS Gold with a DirecT60 and Yamaha 400CDR and have no problems. I bought CD Writer thinking it would allow me to backup the hard drive to CD but it only deals with sound samples or some such. (I am not a musician.) Meanwhile I am living on borrowed time hoping that the disc will not crash until after I get a proper backup program.

|by the end of August. Niff has only been around a couple of years
|but should become a standard feature of scoring programs on all
|platforms before too long. My routines currently support files
|exported from Midiscan, a notation scanning program available for
|Windows. This will at least give Atari musicians second hand access
|to a cutting edge technology. Are there any active programmers out
|there with experience in OCR? I'd love to see this technology work
|on Atari computers alone.

There are OCR programs for the Atari, the best probably being OCR
V1.4f by Alexander Clauss. It is freeware and is available through
InterActive.

Date: 1998-08-19 00:00:00 UTC
From: Chris Martin <cmartin@ti.com>
Message-ID: <35DB5EBB.3007F8D1@ti.com>
Source record: 94996

Chris,

There is a program, called HDD_DMN, which has two pats: (1) one runs on your Atari
at boot-up from the auto folder and connects to a PC via the parallel port, (2) a program
that runs on the PC. It also requires a special cable you can probably make yourself
(I believe it is exactly the same as the ParcP cable).

So, here is what you can do (after your build the cable).

Hook the ParcP cable up between the PC and the Atari via the parallel ports on both.
Then, run the included program on the PC which waits for the atari to connect.

Then, boot up the atari with the hdd_dmn in the auto folder. It should
connect to the PC.

There are several options, if I remember correctly, which allow the atari to see different drives
including using the PC's 1.44M floppy as the Atari floppy.

I tried a few months ago to get this to work with no avail. Maybe you can get it to work (If you do
please let me know). Anyway here is the web page:

http://www.vsb.cz/~l93529/MC_page.html

or there is a link to it, among other neat hardware projects, here:

http://www.geocities.com/SiliconValley/Bay/8745/atari_hardware.html
(check under 'Networking')

Hope that helps,
Chris

Hello,
Have any of you guys tried Olivier Booklage's CAB OVL?
Although its fairly new, it already has some very nice feautures
and many people are very happy with it.
One of the nice things about this OVL is that you can configure
it very easily within CAB.
anyways, just try it out for yourself!

Date: 1998-08-19 00:00:00 UTC
From: Chris <tiberius@pangea.ca>
Message-ID: <6rfvb1toh1@pumpkin.pangea.ca>
Source record: 94999

I have some old Atari stuff that I have neither the financial nor technical where-with-all to maintain. I would hate to see these wonderful relics go to waste and wondered if anyone would be interested in taking them (400, 800, 800XL, 520ST, 1050 disk drive, software, and other artefacts (ie: baby backup etc.)) off of my hands. The 1050 has crapped out and the ST's pcboard is cracked where the mouse plugs in, but, as far as I know, everything else works (I've replaced some chips in the 800 from time to time).
Please e-mail serious offers to me at tiberius@pangea.ca

>BTW: How much are the EZ135 power supplies? I'm guessing direct from SyQuest?

I've never had to buy one actually. The units were under warranty so
I sent them back. The deal I received was I sent only the drive back,
and they sent a complete package (drive, 1 cartridge, power supply,
cable, etc.). Well, the first time it happened I tried hooking the
new drive up using the old power supply. Man, was I pissed for about
45 seconds - then it occurred to me to try the new power supply. I
didn't think it would be the same thing the second time, but sure
enough, it was. So, I've had a little frustration when they died, but
I certainly can't fault their service. Drives came back within days,
and I actually made out a little, considering the extra cartridges I
received and whatnot.

Hopefully it's still under warranty.
I'm not sure of the number, but I have a couple scribbled down:
(510) 226-4000
1-800-245-CART (I think this one is sales)
(510) 226-5400

support@syquest.com

You need to call SyQuest & get an RMA (return materials authorization)
Then send the unit to

RMA-___________

SyQuest Technology
c/o IMI
2079 Hartog Dr. Bldg. 2
San Jose, CA 95131

Anyway, that doesn't help you if your unit is out of warranty.

US Power Supply (Desk mount) Item# 110375 - $29.95
US Power Supply (Wall Mount) Item# 107821 - $19.95
Universal (International) automatically

adjusts to the local power Item# 109097 - $39.95

CA, CO, CT, FL, NC, TX, VA + Sales tax
Shipping & handling $5.75

>and copy all the longfilename with space in it. They will be converted
>by the OS itself. Am I missing something obvious here?

Sort of. I don't want to lose the long filenames just to get rid of
the spaces. My wish (and David Bolt's solution) is to simply change
the spaces to underscore characters. That allows me to keep the long
filenames, basically in their original form, without the drawbacks
that come with spaces in filenames.

Someone else reported this to me, also. Very strange, as I was editing my web site loaded into CAB 2.5 and the pages weren't being updated when I re-saved the currently displayed page, as it always has in the past.

Looking in MagiC's application manager as I'm typing this with QED 4.5 shows that OLGA is indeed running, so maybe it was something else.

I'll have to investigate further when I have time.

Thanks.

A PLETHORA OF CLASSIC GAMES AT VEGAS SHOW THIS WEEKEND
ï¿½ï¿½ By Keita Iida (keita@mindspring.com), Edited by Donald A.
Thomas, Jr. (curator@icwhen.com)

--At the "World of Atari '98" show this Saturday and Sunday,
attendees will get a rare opportunity to play memorable games
that once were and some that are yet to be. An assortment of
coin-op, console and computer games will be spread out among
the vast convention floor at the Holiday Inn Boardwalk Hotel
and Casino directly on the Vegas strip. With a intriguing blend
of the historic, rare and prototypical offerings, this weekend's
exposition will undoubtedly be one of the most diverse
presentations in the history of video gaming.

One of the highlights of the arcade games on display will be
the first coin-operated game title ever produced. "Computer
Space" was designed by Nolan Bushnell of Nutting & Associates
who later co-founded Atari. Not far away will stand Atari's
original "Pong" which is considered as the first commercially
successful coin-op video game. Also on display will be two
never-released prototypes. The "Freeze" machine is the only one
of two in existence today. It was produced by Atari Games in
1993. "Neutron Star" was the last pinball game made by Atari,
and only one was ever built before Atari decided not to release
the game in arcades. Other playable exhibits include Atari's
"Star Wars", "Battlezone", "Tempest", "Centipede", "S.T.U.N.
Runner", "Gauntlet", "RoadBlasters", "Peter Packrat", "Marble
Madness" and "Road Runner". From Bally/Midway will be "Wizard
of Wor" and from Williams will be "Robotron: 2084".

Among the platform systems on display will be the 5200
SuperSystem, Atari's successor to its wildly successful Video
Computer System (VCS, also known as the 2600). "Tempest",
"Asteroids", "Behind Jaggi Lines", "Final Legacy" and "Super
Pac-Man" will be demonstrated for the first time and "Black
Belt" -- only two are believed to still exist today -- will also

be shown.

Atari's 64-bit Jaguar system roars back into action for this event with the world premiere of the released version of "BattleSphere", 4Play's eagerly anticipated multiplayer space combat game. "Native", by Duranik Software, was never completed but the horizontal shooting game will be demonstrated at the Classic Gaming Show for retro-gaming aficionados everywhere. "JagMania", "Jagmarble" and "Painter" are games developed by amateur developers to round out the stellar repertoire of Jaguar titles to be shown at World of Atari '98.

Attendees will also get to take a sneak peek at several new Atari Lynx games in development. "SFX" and "Ponx" are designed by Carl Forhan. "Hyperdrome" -- a recently announced Telegames title -- will be shown in finished form. "TNT-Terry", a Bomberman-esque multiplayer extravaganza, comes courtesy of Laurens Simonis, and "S.I.M.I.S." is a multigame cartridge consisting of several homebrew Lynx games and demos.

Additionally, game stations will be set up so that players can take a shot at world record scores in games for the Atari 2600, Vectrex, Atari 5200 and other machines. In association with Twin Galaxies, World of Atari '98 will enable players to achieve immortal status. High scores that are confirmed and which top the scores in the Twin Galaxies record book will be entered in next year's edition of the authoritative publication chronicling video games' high scores. Attendees who wish to make an attempt at a record on a specific game should bring their own cartridge as just about every game in history is covered in the Twin Galaxies record book.

"We have a lot of other systems such as Intellivision, Colecovision and Odyssey", states a smiling Mr. Keita Iida, co-promoter and co-editor of Atari Gaming Headquarters (http://www.atarihq.com), "This year, we toast the company that launched 'a thousand chips'."

For more information about World of Atari '98, visit: http://www.atarihq.com/atari98 on the World Wide Web.

END

This is only a problem if the shell or desktop doesn't use the standard
methode (ARGV) for parameter passing. Obviously, the application
needs to use it as well.

My point exactly. Just create a tmp folder in your TOS partition
(8+3).
and copy all the longfilename with space in it. They will be converted
by the OS itself. Am I missing something obvious here?

>as Neil Roughley mentioned, can.

I appreciate your investigative enthusiasm with the PhotoLine tutorial,
Charles, but what you're seeing in the GIF's header is perfectly normal.
The first part is the GIF version number, after which is the start of the
screen descriptor. So, the 'ï¿½' you saw means the GIF is most likely 171
pixels wide. It's just a coincidence that the GIF header you studied had
the half symbol. I assume you thought it meant a newer version of the GIF
format ;-)

BTW, Imagecopy will display these GIFs properly. I don't know, though,
what CAB dislikes about them.

> It is already known that Win95 messes up the disks with it's long filenames
> and directory structure. When problem occur, it's better to just go back
> into DOS mode for copying files to disk and back.

It doesn't "mess up" disks. The only problems you might experience when reading Win95-disks on Ataris is that TOS sometimes "sees" the additional entries used for the long filenames. This won't happen with HideVFAT installed.

Writing to a Win95 disk with an Atari can mess up the long filenames, though - but that's problem of TOS, too. Anyway, in no case the actual data is corrupted.

Of course, the best solution is to use VFAT for disks on the Atari as well - this is possible with MagiC and the new FATFS in FreeMiNT 1.15.

Ciao

> this shouldn't be needed... By just copying the files from vfat into
> TPS, the filename conversion should be handled automatically.

I think you missed Terry's point. He is/was not looking for a tool to convert long filenames into short ones, but for a tool to replace all spaces in filenames into - say - an underscore, because some applications can't handle such filenames (especially if either the desktop or the application itself doesn't support ARGV for parameter passing).

If he copied all thos files to a TOS partition, he'd lose the long names, too, not just the spaces.

Btw, with an sh-like shell and the Unix-utility 'tr' there's no need for a special program:

```
for i in *
do
if [ $i != `echo $i|tr " " "_"` ]
then
mv $i `echo $i|tr " " "_"`
fi
done
```

This will rename all entries in the current directory which have space in their name so that the spaces are replace by an underscore. It will fail for entries which already exist in underscore notation, e.g. if there's one file "with sapce", and "with_space" already exists.

Ciao

Hmm .. what happens when you try to use the fontselector to change the screen font? Mine loops. (Magic5, NVDI4).

I have told Christian about this and he says he had problems with library linking when constructing v4.50. He will soon release a 4.51 to put this right.

Guess the best word-processor around at the moment is Papyrus 6.
It's available from R.O.M software. An english version will be available
at the end of august.
For the latest info and the prices go to : (page is in German, but don't
think that'll be a problem for you)

Of course although the KGMD/KEMD distribution requires a free partition,
MiNT itself doesn't need this. Installation of the MiNT kernal is as
simple as copying MINT.PRG into your AUTO folder. However if you want to
create a UNIX-like system you will want a Minix partition, which is where
you need the free partition.

From: mb@tos.pl.net
Message-ID: <ZMT1CYW@tos.pl.net>
Source record: 95068

A member of our Atari club is using SpeedoGDOS for printing, and he's looking at buying an HP Laserjet capable of 600 DPI printing. However the HP Laserjet driver supplied with SpeedoGDOS version 4 only allows him to select 300 DPI.

He doesn't want to spend any money on the machine, so is there a free HP Laserjet driver for SpeedoGDOS 4, which supports 600 DPI?

Thanks for any help.

Message-ID: <6rf039$l98$1@jair.pressenter.com>
Source record: 95074

I don't know how many people are left on the Atari program that still do serious work with music notation, but I am nearing completion on modules to Import and Export Niff files -- Note Interchange File Format -- in my scoring program Proscore. I hope to have the beta version done and posted to my web site:

http://www.pressenter.com/~tkelly/

by the end of August. Niff has only been around a couple of years but should become a standard feature of scoring programs on all platforms before too long. My routines currently support files exported from Midiscan, a notation scanning program available for Windows. This will at least give Atari musicians second hand access to a cutting edge technology. Are there any active programmers out there with experience in OCR? I'd love to see this technology work on Atari computers alone.

Yes indeed QED 4.50 contains at least one bug.
It's however still Olga aware. The bug I found was that Qed 4.50 has troubles
with the *DHST-protocol*.

------------Quote Taskbar.hyp, Jo Even Skarstein-------------------

The Document HiSTory protocol (DHST) is a protocol developed by
Thomas Much for his excellent 'Start Me Up!'. The basic idea is
that the DHST-server keeps track of the most recent loaded
documents, and let the user select these from a handy menu. In
this case under the entry "Documents" in the Start-menu.

---------------------------End quote------------------------------

For some reason Qed 4.50 truncates the paths

e.g. This is the normal path I get with Qed 4.10

E:\QED\qed.app
K:\TEMP\DOWNLOAD\n_aes-english-1.1.7\n_aes.cnf
[qed] N_AES_TH.ING

This is what I get with Qed 4.50

c:\system\qed\qed.app #-->wrong path, ergo can't launch QED
K:\TEMP\DOWNLOAD\n_aes-english-1.1.7\n_aes.cnf
[qed] N_AES_TH.ING

I've told this to the author. This bug will be fixed ASAP

Fully agree with you. I should say go for it. Get KGMD, KEMD, try to find
N.AES, read the docs throughoutly and ups you go.
Once you're used to work with MiNT you'll find that's is far the best
system around.

what about on the PC?? I tried a DOS Binhex decoder, but because the MAC breaks files into two folders - the biary header and the resource.frk files, the PC interperates the wrong header file...

There WAS a port of Wordperfect for the Atari but it fell by the
wayside and is no longer supported.

Much depends on what you mean by a 'word-processor' - there is all
sorts available from simple text editors (Everest, QED etc. etc.)
through to advanced DTP programs (Papyrus et. al.).

If what you want is at the lower end of the spectrum you will
probably find it as Freeware or Shareware from any decnt ftp site.

For more sophisticated programs you will have to pay. Maybe someone
will recommend a retailer in the Netherlands. If you want to evaluate
the best on the market at the moment you can get a demo version of
Papyrus v6 (prints single page docs. only) from there ftp sites or
from ROM software's site.

I fired up my Falcon today and was realy t-ed off, for some reson, the boot sector on the st157n which up until now had worked without fault, went bad and I couldn't recover anything from it. I had removed everything from the old 44meg syquest drive as two of the 3 carts I had for it had gone bad and the last cart I don't trust at all. now everything that had been on the 157 is gone, ended up having to formatt it and mark the one bad sector. Must have been the t-storms the other day.

Anyway, I was looking at the auction section of recycler.com and there was a BIG amount of hard drives up for grabs at even prices I might be able to afford.

But the trouble is, so many TYPES of drives! sCsI-3, SCSI WIDE, SCSI ULTRA WIDE, just the ones I can remember, now the question, which of these can work on a Falcon? I figure another month or two, got to replace this TT keyboard 1st, so far at lest 3 keys I have to almost use a hammer to get to work.

I found out I could replace my Falcon's keyboard with a 1040ST one,it's was dieing too, now it's fine with a 1040 one on it.

>thanks.

It isn't a matter of the names being altered when going from VFAT to TOS,
it's when you try dropping the file, from a VFAT partition, onto a program.
The problem is that a filename with spaces in usually ends up being parsed
as part of the command-line as the space char is used as the delimiter.
It's these programs that have the problem, and it's because of these, that
the program is required.

BTW, this usually seems to occur with C programs, as their init code parses
the command-line and, in doing so, splits up the name. Depending on the
program, my experience has varied from a 'file not found' error, through
to eleven bombs and a total lock-up of Magic.

Can any one help please?

Since having this board, on a couple of programs, especially
Timeworks, I get the following message as it loads -

Invalid Handle!
Handle = $0000
Options are to <continue> or <tolerate> the latter being the
highlighted option.

On selecting this Timeworks continues to load and work normally.
The other programs simply crash whichever option is chosen.

What does the message actually mean?

Apart from this niggle there have been no problems. Only 1 program
refuses to work irrespective of flag/processor settings -
Abbreviator.PRG

Hi Charles,

I know what you mean but I don't particularly like monochrome hi-res.
As to my set up:

STe 6 meg Ram with Veloce+2 TOS 2.06 33.6 modem and port upgrade
Multisynch Monitor, Hard drive.
NVDI 2.5, STinG/Dialler 1.5, CAB 1.5, Newsie, Popwatch, 1st Guide
as viewer for .gif and .jpg.

I intend to upgrade to CAB 2.7 once the English .rsc files arrive on
the assumption it is worth it for a humble STe.

I like the NASA JPL and Hubble ST www sites, they have what would
appear to be great pictures. I appreciate that whatever I do they
will never be as good as Falcons or PCs but surely some improvement
can be got.

When ignorance is bliss - I just added Telnet in to CAB, I didn't have a clue what I was doing, (still don't), it just seemed like a good idea as there was a box for it. My daughter dialled up her university website, clicked on the library area, Telnet suddenly appeared and she was onto their computer renewing her books!

I hate to tread on Falcon territory but, since no-one has answered
your 3 or 4 times repeated question, here's my suggestion:
alter its extension so it won't run (until you decide what you
really want) -- or just delete it (as I did on my TT). :)

Cheers, Charles

I have two versions of Canvas (art/graphics program) that were given away on an ST Format cover disk a few years ago. I don't recall them being commercial (although I'm not 100% positive that the second version wasn't just a demo). But the first version works well, and is fully functional. Of course you could be talking about a _different_ program that's also named "CANVAS"???

If I were you, I *would* use ST HIGH, and install mgif.ttp as viewers
for jpeg/gif. With this small program it displays the pictures soooo
clearly and it almost looks like you are displaying the pictures in
greyscale. If you dont have this I can ema ll it to you.
Why dont you like ST HIGH? Does the 4 colors you get in ST MED actually
make that much impact?
When I use my STe to browse the web, I usualy go directly to ST LOW, and
use a virtual screen like MonSTEr .. This worked fairly well for me.
Anyways good luck with whatever you decide on.

4844. Sneakpeek explanation and summary for comp.sys.atari.st

Date: 1998-08-20 00:00:00 UTC
From: sneakpeek@talkway.com
Message-ID: <XxSC1.811$Mw1.923072@c01read01.service.talkway.com>
Source record: 94949

We developed SneakPeek postings as a result of many Usenet users' desire
for a summarizing tool that would help them skim through the most active
threads. Thus, SneakPeek postings are intended to help users with limited
time keep abreast of group discussions, stay in touch with more groups,
and check out new groups quickly.

Usenet is an environment where every voice should count equally. However,
while some users have found SneakPeek postings useful, others have tried
to shout it down, potentially resulting in the tyranny of a vocal few.
Therefore, we encourage all to post their constructive opinions so that we
may democratically decide if there is room for SneakPeek postings in Usenet.

Talkway, Inc.
http://www.talkway.com

The rest of this message summarizes the most active recent threads in
this newsgroup.

SUBJECT: What is MINT?

*** Tim Conrardy:
Hello All:

I don't mean to sound ignorant..BUT..what is MINT? Is it a multitasking system,
or perhaps a Unix-like system for Atari? Would it be worth installing
on my TT? Where can you get it? (FTP sites?)or can you direct me to a good FAX on the
subject?
...

*** jasivu:
...
Yes. It is Unix-like multitasking sytem and definitely worth of installing :-)
In fact it is one of the best things happened to Atari lately ...

*** Martin "Nightowl" Byttebier:
...
Fully agree with you. I should say go for it. Get KGMD, KEMD, try to find
N.AES, read the docs throughoutly and ups you go.
Once you're used to work with MiNT you'll find that's is far the best
system around.

SUBJECT: 1040 STE for sale

*** SkylineSwine:
I have for sale an Atari 1040STE in really good condition boxed with

instructions all disks etc.. a couple of boxed games.
It all works perfectly apart from the internal disk drive which will simply
not play disks it whirs around but wont load them.
...

*** SkylineSwine:
sorry ive sent it to the wrong newsgroup, i apologise to everybody in here

...

*** Adrian:
...
It's often been said that the choice of cross posting says more about a guy
than the post itself...

SUBJECT: Re: HELP !! Read a diskette over Windows

*** Mauricio Tavares:
...
A PC-formatted 720K floppy disk can be read by an Atari
without any problems

*** Stephen Moss:
...
I would not say that, using Windows 3.1 to format the disk to 720K is fine
but I have had trouble with Windows 95, I am currently investigating this
and will post my conclusions to this newsgroup.

*** Nicholas Bales:
...
It is already known that Win95 messes up the disks with it's long filenames
and directory structure. When problem occur, it's better to just go back
into DOS mode for copying files to disk and back.

SUBJECT: Converting filenames with spaces

*** Terry May:
Lately I've been getting quite a few, uh, files from Usenet, with
spaces in their filenames. Not a problem, as MagiC's VFAT handles
filenames with spaces quite well.
...

*** Louis Holleman:
On 17 Aug 1998 14:58:34 , Terry May wrote:

*** Terry May:
...
Ah, if only I could take credit. Alas, I stole that excellent
tagline from someone else in this group. It *is* rather good,
though. :^)

SUBJECT: QED 4.5!

*** Terry May:
I just ran across QED 4.5. Lots of new goodies in this version,
including non-modal dialogs, support for selecting multiple filenames
in MagiC's non-modal file selector and support for binary files.
...

*** Martin "Nightowl" Byttebier:
...
Yes indeed QED 4.50 contains at least one bug.
It's however still Olga aware. The bug I found was that Qed 4.50 has troubles
with the *DHST-protocol*.

*** Katherine L Ellis:
...
hm qed 4.5 and working very well with olga. (with cab right now)
no prob at all.

Thanks for the info. I had heard others mention the program here, but never realized it was commercial. And seeing as I only want to edit a couple of things in my MAGXDESK.RSC file, I think I'll look at some of the other PD editors mentioned here.

>___ Mountain Reader II - #00000053

I used Mountain Reader II (and registered it too!) back when I was on a BBS that had .QWK messages. It's a nice program. Too bad I don't really have a need for it now, I did enjoy using it. So I'm guessing you're using a BBS to get your newsgroups and reading them with MRII...

When I was on the Muskrats Den BBS over in Hawaii, which is gated to the Internets, there was a menu section where I could go in and give it a keyword like 'Astro' and it would then send out a search. I would log on the next day and there would be a e-mail text file listing all the FTP sites that had anything dealing with the 'Astro' keyword.

Is there anykind of a program I can run on my TT/030 that would do something like that?

4851. The .EXE Files?

Newsgroup: comp.sys.atari.st
Date: 1998-08-20 00:00:00 UTC
From: kenkel@zetnet.co.uk
Message-ID: <6ria0kqao1@irk.zetnet.co.uk>
Source record: 94956

Hi again,

I've raised this matter once before but I thought it would be worth trying again. I often receive .exe files via e-mail but cannot read or decode them. They are, I'm told, PC format files and cannot (?) be viewed on the Atari, but surely there are some programs capable of converting or viewing them, as with so many types not readily compatible with the Atari platform. If anyone has any info about whether there are available programs for this purpose and where they might be obtained, I would be very grateful.

Cheers and thanks as always,
EDK

You can buy replacement lithium batteries, but the best way to go
is to get a 4 AA battery holder with the plug-in connector. Use alkaline
batteries in it. This will cost you less than $3.

Date: 1998-08-20 00:00:00 UTC
From: Zetnet News <m.lock@zetnet.co.uk>
Message-ID: <6rfm83$5pb$1@roch.zetnet.co.uk>
Source record: 95010

Hi all,

Think I'd better add my two penneth here.

It is a shame that the situation with WAG's last meeting became public knowledge, the plain truth of the matter is that there was a communication breakdown, that's all. To go shouting gloom and doom is not advantageous to anyone and only perpetuates the confusion. Yes it is correct that the WAG committee is going to have a discussion on the way ahead, but I must say it is unfortunate that some felt that our business was everybody elses.

The situation as it stands is that the Wessex Atari Group is still a going concern and changes, if any to that fact will be announced by the committee in a responsible manner and not as tittle tattle as some have seen fit to do!

Please refrain from speculation and await the official verdict....Thank you.

4859. WENSUITE or CAB

Newsgroup: comp.sys.atari.st
Date: 1998-08-20 00:00:00 UTC
From: kenkel@zetnet.co.uk
Message-ID: <6rft2mmdb1@irk.zetnet.co.uk>
Source record: 95012

Hi,

I'm currently using the commercial version of CAB 2.5 . Recently, I downloaded the demo of WENSUITE, just to try out. I haven't been too successful in getting it connected (only once, I think, and this may be something to do with limitations of the demo version, or the fact that it has it's own internal dialer). I notice that it claims to be faster than it's competitors and, I must admit, the screen redraws quite quickly. Does anyone have any experience of WENSUITE, especially compared with CAB? What are the pros and cons, I wonder?

Thanks,
EDK

4860. "Interface"

4861. Epson Stylus Color 600

Newsgroup: comp.sys.atari.st
Date: 1998-08-20 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6rfr1u$mdu@enews2.newsguy.com>
Source record: 95014

I just got my new (actually "re-furbished" by Epson) Epson Stylus Color 600 printer last week. I bought it locally (here in Southern California - USA) at FRY'S Electronics for $149. A really good price I think. :^)

* FRY'S has a large inventory of "refurbished" 600s at that price. They certainly look and function as brand new units (which are $199).

The difference? Refurbs only get a 90 day warranty. New units get 2 years (from Epson). However, I got an extended FRY'S 2 year warranty (normally I don't go for those), but with that, any problems, I take it to FRY'S and they give me a loaner while fixing it. With Epson's (new unit) 2 year, I'd have to send it to Epson (and no loaner). Plus, buying the refurb+FRY'S 2 year warrantly is about $25 cheaper than a new unit with Epson's warranty.

Anyway, it's working very well with PageStream 2.2SE and other programs using GDOS/NVDI driver.

My question. Has anyone ever seen a "Utility" program for this printer. It comes with some nice Windows printer utilities, and it would be kind of cool (although not 100% necessary) to have something similar on the Atari. I know that NVDI and MAKEPRN.APP will allow some printer customization and settings changes, but this isn't exactly what I need. With the windows utilities, you can adjust the printer for type of paper and allign/clean the heads, as well as several other things.

Thanks for any help!

Regarding MSNBC and CAB 2.7 and its OVL file.
Just made a test of this site with CAB 2.6 and the old OVL, guess what?
No problem what so ever. The page shows up just fine.

It must be the OVL file from CAB 2.7 that is the problem.

cheers

Hmm, you mean no one has answered yet? The only reason I did not was because
I was sure someone else would.. :)
The 1st thing I would try is taking it OUT of your magic apps folder, and
into your accessory one..
Tell me if that works?

INTERFACE is commercial software, i. e. it's not available by ftp. I'm
not quite sure if it's still available. There is no English version as
far as I know.

I doubt that it has anything to do with C. The startup codes for Pure C
and GCC (MiNT-Lib) have been able to process filenames with blanks
(using the ARV method) for ages.

Let me guess you have NVDI 2.5 installed.

At least this is reminicent of an NVDI problem I used to
encounter. There is a way to configure NVDI to not do this. Sorry been
to long to remember. It's in the book though.

Hi Paul,

Don't know about Interface - but here's the FILE_ID.DIZ for RSM211E
===
ResourceMaster v.2.11e, Shareware RSC file editor, programmed by Armin
Diedering. Can read/write >64Kb RSC files (AES 4/Interface format).
Integrated icon editor supports CICONS (colour icons) - ideal for editing
Thing/jinnee icon files. Includes ST-Guide hypertext format documentation.
*** Official English archive released by InterActive ***
===

I forget the Interactive ftp address... something like
ftp.sofa.dartnet.ac.uk (or .co.uk or something)

It was indeed commercial, costing around ï¿½15, as I bought my copy on the
basis of the original demo version on STF. They subsequently included
the full program on 2 cover disks (once backed with a sequencer), and
then later with an updated version. I still have my original copy at
home though.

Just to avoid confusion: 'find N.AES' should be 'find a distributor for
N.AES', as N.AES is commercial software. An English version is being
worked on, as far as I'm informed.

Ciao

Thomas

Hey folks!

I've recently been introduced to the Atari ST line of
computers, and before I go any further with my 'barebones setup
purchase,' I came up with some questions that I thought I should ask
the 'pros'

So, here they are :) ... :

* Is there a "TOS" switcher for the 1040 like the 'kickswitcher' on
the AMIGA ? If so, how much migh they cost ? And how easy are they
to use?

* Do NTSC machines have problems running overseas software, obviously
meaning PAL stuff ? If the answer is 'yes,' what are the possible
solutions ?

* What kind of ACCELERATORS are available for the 1040 ?

thanks in advance for any info!
-Wendell

Hi,

all I can add is it's still commercial (range USD 325 or so), no longer for Atari but (you guessed) Win-95/NT and MAC OS. Combined DTP/Image touch-up/vector drawing package. From what I gathered the users interface is messy. The kid must have found out where the dollars grow :-)

wensuite 2 is a complete crap full of bugs. eg to send more than a
mail per connection you must rename the temporary files manually. and
then afterwards you must reboot to send more. lots of html 2+ web
pages crash the program or mess up the screen. some newsgroups don't
accept its messages if you forget to remove the extra cr's.

only the news client is decent.

they promise a good wensuite for the version 3. let's wait and see.

Wordperfect for the Atari is pretty much outdated. The best WP on our platform is said to be Papyrus at the moment. See with MABN (the only dutch Atari dealer I know of) if they import it. They have a web page, but I've forgot the URL.

There's a file called netzeil.lzh or .zip on most of the Atari FTP servers
with the PSU schematics. Have a look at ftp.uni-paderborn.de or ftp.leo.org.
I think it's on one of those, but it may be elsewhere.

:-(Sorry to hear that.

Do you know that it is often possible to recover from this if you have
a listing of the partition information? Both ICDFMT and Diamond Edge
will allow you to write the boot sector only if you can supply the
partn. info.

Bit late to tell you now that you've re-formatted though.

I followed the demo releases of Wensuite for a long time hoping to
find something to evaluate. Sadly, all the versions (around 10) which
I tried caused Magic to detect a store violation error after
dispalying about 2 html pages.

The cons. are that it uses it's own TCP/IP stack and therefore cannot
be used in the same connect-session with other (STiK-compatible)
clients. I suppose the counterbalancing pro is that it contains news
and mail clients of its own which is fine if you prefer them to Newsie
etc.

Definitely - I have one. I'm not sure what the favourite PD RSC editor
is ATM. Perhaps someone will advise. I have, in the past, used ORCS
which was quite adequate and RSCMASTR. There are quite a few about.
Why not take a look in Jo Vanderweghe's site? He has them all nicely
catalogued there.

Yup, that's the one. With this and the 'Print/Choose Font' the top
menu becomes greyed-out and QED goes into a loop. Previous QED v4.10
works fine. I have unpacked the archive again - no go.

I am using the Magic font selector by running MAGCUFSL as an AUTO.
Perhaps you hook up to the font selector by a different method,

Hello,
Interface *is* a commercial program, so you wont find it on any
legal FTP sites :-)
But dont worry, a very good resource editor which is still being
developed is called ResourceMaster, and there are english versions available..
I think from CyberSTryder? But Im not too sure.. anyone know for sure?

>high res option appear on the preferences?

Yes, it's normal - you need either a monochrome monitor (Atari SM124 or 5
were the originals, some others available) for hi rez, or there are PD
emulators available like Sebra, though this gives a rather jerky display
of mouse movements etc. The problem is that the verticval refresh rate
in hi rez is 72 Hz, which is very easy on the eye (and the display is
very sharp too) but beyond the capabilities of the 1224 and similar
monitors as well as TVs. And the horizontal frequency is too low for
most PC-style monitor except for a few Multisyncs like the early NEC 4.

Robert, do you have the filename by any chance please? I'd like to try
and download this via email (I don't have proper www access fixed up at
present) - there is a bot that does it but presumably it needs to know
the filename as well as the URL. Thanks!

4898. Re: Power Supply and memory for Mega ST 2

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: Tom Carman <carmant@nucleus.com>
Message-ID: <35DE0725.C68A5D28@nucleus.com>
Source record: 94901

You can use a PC power supply if you don't mind having it sit on top outside the case. I did this with my highly modified Mega 4. The floppy drives started failing and I got bombs more frequently than I should. It all had to do with the power supply.

You will need to remove the old power supply. Watch what you touch. They can be dangerous. The voltages are marked on the power supply beside each line going to the connector that attaches to the motherboard. Write down this info with the colour of each wire. Now you can cut that harness off your old power supply to be used on the new one. I bought a used PC power supply at our local computer surplus store for $25 Canadian. Use a multimeter to test the output of each line on the new supply and splice yourself together a wiring harness about 2 feet long with the connector from your old supply attached to the end.

One final thing. I wanted to keep the fan from the old power supply for cooling the innards of the computer. I simply removed the power supply circuit board from its metal base plate by removing the four screws that attach it. You will find two wires that run the fan attached to the power supply. If I remember correctly they are 12 volt. You'll need to use a tester to get this right. I took a plug off the new supply that was close to the Atari connector, modified it a bit and used it to tap into the duplicate connector on the motherboard beside where the power supply plugs in.

I then mounted the fan back onto the motherboard and plugged it in. I ran the wiring harness from my new power supply through the whole where the 110 volt power cord used to attach to the back of the computer. I put the case back together and plugged it in. Everything now works great. Hope this helps you out.

$200?? Your kidding right? I just paid $20 for my STf and $10 for my
1224 monitor at a local thrift store. They told that they have more ST's
in the store room too. $200 is way over priced even if you have the
origional packaging. Check out the Ebay online auction and you'll get an
idea of what you can expect.

Then it's possible that some programmers aren't using that method to
parse the command-line. I know that the one I use (Sozobon v2) splits
the it up using spaces as the delimiter. I've yet to rewrite that part
so it uses ARGV in preference.

Ok, I d/led that new cab ovl and i placed it in my cab folder,
in with the older one which i just renamed. i then powered down
the tt & powered it back up.

I then went to recycler.com & tried to login & for 3 times cab
crashed on me! here is wht would hppen...

I would get the 1st page, click on login, the next page would
load up and i would input my hndle and password.

At the top of the screen it would show data being loaded in,
then the screen would blank out totaly, nothing but gray screen,
with the top still showing data coming in.

then BANG BANG two bombs.

4905. Letter from Uwe Seimet re IDE HDD problems

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <XXU1C4O@tos.pl.net>
Source record: 94962

Unfortunately, although I don't understand what the problem is, it seems that despite my comprehensive summary about the hard disc problems, people still wanted me to quote the letter from Uwe Seimet, even though the information in that letter was included in my summary. (In fact I'm sure the summary also included useful information from other sources too.) In any case, I've been informed that "a lot of users were asking for it." So here is the letter:

From us@ooc.de Fri Aug 21 00:10:26 1998
Date: Mon, 10 Aug 1998 09:59:40 +0200
From: Uwe Seimet <us@ooc.de>
To: Mario Becroft <mb@tos.pl.net>
Subject: Re: IDE HDD problems...

> after about 10 seconds. What is going on here, is this a HDX bug,

Yes, this is probably a HDX bug. There are bugs of these kind.

> something I'm doing wrong, or what? Also what is that about the drive
> being formatted with a previous version of HDX?

This is a known bug of HDX. BTW, formatting drives that have no bad sectors doesn't make sense. You don't gain anything by this. Note that some IDE drives are damaged when formatting them.

> With HDDRIVER version 6: When I choose to partition the drive using
> HDDRUTIL, the Partition Media dialog appears, and all seems ok except that
> the "bytes per sector" field reads 21298, which seems a distinctly unusual

Yes, indeed. Did this happen with the current (demo) version as well? This might be a bug that was fixed some time ago.

> size, and that the capacity is listed as 2793.2MB (it's really a 5GB
> drive) but what's more: the "free" megabytes, listed just above the Help
> and OK buttons, is 203497.2! (I sure wish it was really that easy to turn

This all is a result from using the wrong number of byte sper sector.

> Is there ANYTHING I can do to format/partition/do whatever is necessary to
> this drive so that it can be accessed with AHDI? Or else will HDDRIVER
> version 7 solve the problem? Or is there another driver that will work -

The current version 7.5 should work. Check if the number of bytes per sector is reported correctly by this version.

> what about CBHD - does it support IDE? I have suffered enough problems now

Yes, it does, but I don't know how good this works. You will have to check this.

> hate to recommend to the person that he should buy HDDRIVER, if I have not
> seen it working with my own eyes. However I guess that's not possible. (I

Yes, of course. But as there are no known problems with large IDE drives and a lot of people already have drives that are quite large, I think the current version will work fine.

> don't want to upgrade HDDRIVER at the moment, since version 6 is working
> fine for me, and if I always updated to the latest version it would get
> rather expensive, since the updates appear so often.)

Yes, I see. But it's fine doing it the way you do: Updates only make sense if you can profit from the new features, otherwise an update is not necessary.

> Perhaps I could edit the disc with a sector editor and manually enter the
> correct partition info, if this is in fact where the problem lies. Or if

You can try, but this is quite complicated.

> so, where can I find a disc editor that will operate on IDE drives

Most editors should work because the editor doesn't have to know if there is an IDE or SCSI drive. What definitely works is DISKUS but I don't think this would be much help because it is a German software. See my web pages for information on this software. There is also a demo version on the HDDRIVER floppy disk.

> (I have DADE but it doesn't seem to like the drive)? Or is there some free
> partitioning program, even if it's not a complete hard disc driver, that
> might help me?

No, I don't think so. Partitioning is usually done with the software coming with the hard disk driver.

Best regards Uwe

4910. NEW AUDIOWAREZ SITE for ATARI FALCON

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: warez1@caramail.com
Message-ID: <6ritvg$p05$3@front4.grolier.fr>
Source record: 94967

The only AUDIOWAREZ SITE for ATARI FALCON, in the WORLD!!!!!

Send me your e-mail for the address.

525 crack: audio files convert
AUDIOMASTER 2.06: mastering, compressor, eq, analyser
AUDIOTRACKER 1.24: DTD 8 tracks
CD RECORDER 1.09
CUBASE AUDIO SCORE FALCON: Midi + 16 audio tracks
DIGITAL TRACKER: Tracker 32 voices
DYNAMITE: Very good compressor
MUSICOM 2: DTD 2 tracks editor
ZERO X 2.0: samples editor

The ATARI FALCON is the BEST computer for peoples who have no time to
lost with that fucking WINXXXX.

CUBASE AUDIO FALCON requires only 4Mo RAM and no fucking hardware like
a soundcard.

The FALCON have one DSP 56001 and DMA sound!!!

The FALCON can record 2 tracks while it's playing 8 tracks 16 bits
44.1KHz!!!!!! 16 tracks with CUBASE AUDIO!!!!!!

FALCON = POWER WITHOUT PRICE

4911. CAB.OVL 1.3010 beta available

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: baldrick@dilbert.netset.com
Message-ID: <35dcffde.0@athena.netset.com>
Source record: 94968

I've fixed the Referer: support a litle bit more. That's most of
the excitement. A few more CGI's (counter's mostly) are happy.

If you have any pages you are having problems with email me with
the problem and the URL.

I have a small list, but so far the offending page is either
offline for repair (for example: onelist -> new list)
or seems to be some form related problem.

On the forms I'm not certain if the fault is with me or CAB. So
I've mailed the particulars on in the hopes that I we can get these
working as well.

.EXE are generally PC executable files and so there is no way to convert
these PC programs into Atari programs. The only thing I can suggest is
either try running them on a friends PC, or get hold of a PC emulator.

There is a software PC emulator called SoftPC that emulates (I think)
an old XT PC and is available from many Atari related FTP sites.

Hope this helps.

Regards,

Ben Hills.

The simplest way to install MiNT is to copy the MINT.PRG to your
AUTO folder.

This of course only installs the MiNT kernel.

To be of anymore help it would be useful to know what files you have
downloaded and what you intend to do with MiNT.

Regards,

Ben Hills.

4914. PaCifiST on Laptop

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: ben@imperial.co.uk
Message-ID: <6rj50k$f94$1@nnrp1.dejanews.com>
Source record: 94971

Hi,

I have an old 486sx 25MHz IBM Thinkpad with 4MB RAM and a tiny 80MB hard disk. I am currently running the DOS version of Gemulator which, with NVDI installed is just about fast enough to be useable.

I would like to install the latest version of PaCifiST on it, but when starting PaCifiST I get an error message saying that a VBE driver cannot be found and then the PC locks up.

I have tried a few freebie VBE drivers but without much luck.

So, I would like to know if anybody knows of a good VBE driver that works with PaCifiST that has low memory requirements, or knows how to switch PaCifiST into a mode that does not require a VBE driver.

Thanks all.

Regards,

Ben Hills.

Even if you manage to get it working, PaCifiST is going to run very
slowly on that machine.

4916. CAB OVL Beta 1.3009

Newsgroup: comp.sys.atari.st
Date: 1998-08-21 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6rj90i$q0s@enews4.newsguy.com>
Source record: 94973

Well I thought I'd give the 1.3009 OVL beta a try (with CAB 2.5)...

I used it on a site I'd been to before, that let's you create a sort of custom user info file (user name & password required to enter later). Anyway, with the old OVL I was using, I was able to sign up, but never login as a member. I always got the transaction failed message, but I know that the original "application" forms worked, because I often got e-mail from the site, telling me how long it had been since I visited, and to come back soon - that sort of thing.

However, I got a little further logging in with the new beta OVL, but not all the way in. A page telling me to login (again) appeared after each login attempt, then there was a message on that page stating that "if I kept seeing this same page, I was having problems with my cookies".

But the worst of it was that the info line of CAB (with the little moving clock etc.) suddenly grew to about 20 times it's normal size, and took over the top third of CAB's window! Not good. It totally screwed up the display. And I never saw this happen before, so it must be the beta OVL.

Anyway, if anyone wants to try it out, the site is:

http://www.recycler.com/

I would suggest trying to first become a member, then go back later and try to login. (obviously) ;^>

Cross-posted to: rec.games.video.atari,alt.atari.2600,alt.atari-jaguar,alt.atari-jaguar.discussion,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,alt.emulators.classic-arcade,alt.games.video.classic,rec.games.video.classic

I'm on my way to the show tommorrow and wanted to put this up one last time until I get back. For all those who ordered today(that's thursday), I will confirm your orders on Monday.

ANNOUNCING THE OFFICIAL WORLD OF ATARI VIDEO!

It's the only one that can USE the name, show you the speakers, get you behind the scenes, and more! That's right, this is the video to own. If you can't make it to the show, than this will give you the experience(compressed down to two hours - think of it as a Blipvert). If you are going, than this is the perfect way to remember the show. Here's what you need to know.

All the speakers will be present on the tape.

Auctions, dealer rooms, and the Atari Archives Museum will be on the tape.

The BattleSphere Tournement will be on the tape.

Extras like direct feeds from the new games and software being displayed at the fair.

AND MUCH, MUCH, MORE!

How does one get their hands on this tape? Easily! Just go here
http://home.earthlink.net/~santora/woav.htm
and fill out the form. It's that easy! After you receive a confirmation, send off your check or money order to the address you will be given and then that's it. Soon afterwards you will find yourself in possesion of the only World of Atari Video!

ORDER YOURS TODAY!

http://home.earthlink.net/~santora/woav.htm

They could be self-extracting Zip archives. Try renaming the extender from 'exe' to 'zip' and then run ST-ZIP (or whatever you use) to see what it reports. This method should work just fine if they are, indeed, self-extracting Zip archives and were created under Windows 3.1. If the executables were created under Win95, chances are STZIP will choke during the extraction.

Why not just inform the sender that you run an Atari and not send OS-specific binaries?

Hi,

That's quite normal...you need another black & white montor to run high
resolution (sm124 or sm125). There are emulators to run high res on a color
monitor...

I wonder if Alexander would be interested in taking on the project of music notation OCR. The basic principles would have to be very similar to alphabetic character recognition, and in many ways the basic music symbols have less variation than the thousands of text fonts available. It would be an interesting project I'm sure.

Now that you have a web connection you can use any of the many search engines (Yahoo, AltaVista, Web Crawler etc.) but, as far as I know, these all deliver results on-line - there is no e-mail results facility. Is this essential for you?

The engines are quite fast and will deliver a page of results in less than 20 seconds, you could then get CAB to print or save the page(s).

EXE files are PC executables (rather like .PRG files on the Atari).
While you can un-MIME or un-UUE them on an Atari they are unlikely to
make any sense on that platform as they just contain 80x86 (Intel)
machine code. You could use a normal file editor to view the binary
but I don't believe there are any Atari-based 80x86 disassemblers
which would translate them into code for you.

The best you can do is to dump them onto a suitably formatted (720k)
floppy and run them on a nearby PC to see what they do.

So downloading the KEMD by itself is not sufficient?

>power supply part.

There were at least half a dozen different power supplies for the 520 from various makers. You'll have to specify the type, then find someone who has it. Possibly Best Electronics may be able to sell you one. But frankly replacement PSs are fairly cheaply available (I paid £10 for a used one) so they are hardly worth repairing.

>and what's the file name?

You *shouldn't* find it on any ftp site - it's commercial! Sold by
Floppyshop for £25. Well worth the money - it's very good and stable.

>BTW: Is there an English version? If not, can anyone point me to a .RSC file
>editor that _is_ English?

Yes, this is an English version, based on my translation for Compo and
revised for a new editin by Tom Thomason. There is a Shareware program
called ResourceMaster available (supported by TransActive) but there
have been reports that it messes up some RSC files and I have had some
redraw problems after it terminates. Worth a try though, as long as you
work on a copy of the RSC file and not the original.

Nick, should this not be netzteil.lzh/zip? That's the correct word in
German. But as I said in my reply to the query, there were at least 6
different PSUs for the ST from various manufacturers and these weren't
all the same. I have at least 3 or 4 (some NG, some OK).

Greetings all.

Is there a prg or cpx that allows changes to the keyboard, ie to achieve
german umulates and the like?

Where might this be found?

Replies by email please.

Thanx,

Willard

Hi Steve... Um, I'm not one hundred percent sure about this, but it
sure seems to me like I used to hold the alternate key down, not the
control key. If I remember correctly, just hold it down until the
drive A would come on, and then release it.

>I tried it also by putting 'setenv QED=e:\qed' in my mint.cnf but still the same.
>Any idea about this?

This works for me:

editor=d:\okami\qed\qed.app
editfmt=%f %l
editwd=d:\okami\qed

The last line is necessary for changing the path to QED, so that it
can find its resource file. Note the lack of a trailing backslash.

>I am using the Magic font selector by running MAGCUFSL as an AUTO.
>Perhaps you hook up to the font selector by a different method,

I'm using this in my MAGX.INF:

#_ENV FONTSERVER=MAGXDESK

However, I'm using Ease as my desktop. I had previously installed
MAGCUFSL, so that I could set fonts from aFTP (and perhaps other
programs that didn't work). But I forgot to add it to my Stoop
config, so it got disabled without me noticing, the next time I used
a Stoop hot key. So maybe you can set your font in QED if you too
disable it (at least temporarily).

There are 2 other ones in beta phase, but I'm not sure they are to be
freeware when finished. The only complete free one is Atari's AES (4.1 I
think).

No. KEMD contains the english docs and installation files only. You need the
KGMD archive, which is much larger. As someone said, you can also install
just MINT.PRG in your auto folder without installing the UNIX filesystem,
but I've never tried this.

To get high-res, you need a high-res monitor. The SC1224 or a TV set cannot
display 640x400.

Have a look at the Quick FAQ...

It's not as bad as it sounds. They come from a friend of mine who runs
a PC at work - like all his colleagues - and he merely forwards them
to me as one addressee on a long list. If asked, he would say ke knows
that I run an Atari. On the other hand, I can view a lot of files he
sends me, so he wouldn't take the time to edit his mail-outs just for
me. No problem but thanks for the general advice!

I did get an e-mail from someone in the group, telling me about an
emulator called SoftPC which might enable me to run .EXE files.
Haven't managed to locate it yet though.......if anyone knows where?

You have to have the Atari SM-124 or SM-147 Monochrome monitors for
ST High rez. There's a few programs out there that allow you to run
prgs that simulate you being in ST High, but they won't be as smooth
and crisp as a true SM-124 monitor. Just pick up a SM-124 used
and you'll be happy if your going to play any with anything like DTP
or even much word processing. I have both, but my SC-1224 is still
boxed up while my SM-124 was one of the first items unboxed after
my recient move.

I haven't tried recycler yet. I've put it on my list now. I
would guess this is probably due to a bug I've just recently tracked down
in the redirection code. Might not be though. I have found a couple of
URL launch pads that prettily reliably blow up on redirection. Guess that
means I need to fix it eh ;)

4955. monitor cable

Newsgroup: comp.sys.atari.st
Date: 1998-08-22 00:00:00 UTC
From: steamer954@aol.com
Message-ID: <1998082207153000.DAA27516@ladder01.news.aol.com>
Source record: 94913

Hi

I have a "monitor master" purchased form a fire sale at a local (200 miles away) Atari dealer just before he went under. The problem is that I did not get a monitor cable with it and when I try and use a cable from a color monitor the switch to mono does not work an the monochrome detect wire is not connected on any of the cables that I have tried. Any suggestions as to where I could get the connectors to make a cable? or any other helpful suggestions ?

Thanks
Stephen (Steve)

From later in your post I don't think the following is the case,
but just wanted to point it out.

WinZIP etal on the PC can make self extracting archives in the
same manner as STZIP. These files are naturally enough .EXE files from
Windows programs. You can use ZIP on them to extract the files. At least
I have always been able to. :)

If you have GFA it's very easy to create. A group of friends and
I did a test years ago and GFA made the smallest code. (of course some ASM
coder might be able to beat it)

Basically just type in SHOWM or what ever the GFA command is for
show mouse and that's it. Compile it up and your on your way. If I
remember correctly GFA made a prg under 100 bytes. But it's been over 8
years so... the memory fades.

From: stevegreen@zetnet.co.uk
Message-ID: <6rlun3$9v8$1@roch.zetnet.co.uk>
Source record: 94916

Hi all, while mucking about with my Stacy (TOS 1.04, 4mb, Conner40mb HD) i've managed to create
a classic auto/acc software clash. The naughty item is an old software accelerator Quick ST i
belive. The result is a constantly rebooting machine with no access available to the internal HD.
I've tried the usual cold boot then initiate stuff and holding the Control key down during a warm
boot does not seem to work on TOS 1.04. Some commercial games autoboot from floppy without talking
first to the HD, through the bootsector i suppose, is there a virus killer/bootsector available
which does this? This has been going on for a week now (hey just after selling the spare machine!
surprise, surprise) any help warmly received.

Hi,

I grabbed these files from this site (I believe) some time ago. Got a
PSU.PCX file here... All the schematix were in PCX format (isn't that great,
for Atari schemes?) The PSU one is something 88 kB.

Hi,

well, wasn't the old XT commercial, incredibly unbearably slow too???

SoftPC is not really commercial, it's an alpha version that never got
further, and you can get it straight from my page. See sig. Note that SoftPC
only works on TT's and Falcons, it needs 640x480x16.

Hi all, i am looking for these Jag items -
IRON SOLDIER/SUPER BURNOUT/FLASHBACK (CARTS)
PRIMAL RAGE/MYST (not demo!)/HIGHLANDER (CD's)
state resonable price.
Also has anyone STUNT CAR RACER for the ST?

I would like to offload for (pounds) or swop for any of above -
ATARI KARTS(10)/WOLF3D(5)/KASUMI NINJA(5) all Jag carts.
Jag control pad (5)
Real time clock cart+disk for ST (5)
Conner 210 mb external SCSI hard drive (20), with mains lead but you'll
need a cable(Falcon) or adapter(ST)
LLAMAZAP (5) for Falcon

all exclude P&P

Quite normal. You need an SM124 or SM 125 (or equivalent) to run mono
hi-res mode. It has a higher scan frequency spec.

4967. Internal connection of upgrades to ST

Newsgroup: comp.sys.atari.st
Date: 1998-08-22 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <8SW1CUG@tos.pl.net>
Source record: 94925
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have been designing some upgrades for the Atari ST, STE and Mega ST(E) machines, but it seems difficult to find a universal way of connecting the upgrades inside the machine.

In general the CPU has all the signals necessary for the upgrade, so the obvious method is to connect the board to the CPU. However the CPU is different in various machines, and in the case of the Mega STE, a few signals must connect to other places.

The Mega ST is good, since it's easy to connect to the megabus. In the STE, it's possible to get some pins to squeese in between the edge of the PLCC socket and the socket pins, however I'm not sure whether this will work in all PLCC sockets, or whether it will bend the pins too far so that they don't contact well if the upgrade is removed.

The ST is the worst, since there is no way of plugging the board in. It would be difficult to solder the board onto the CPU, because the board would cover over the top of the CPU, making it difficult to get at the pins. All I can think of is either: remove the CPU, then solder the upgrade in place of the CPU, and plug the CPU into the top of the upgrade; or alternatively solder a socket onto the CPU, then plug the upgrade in.

Even so, in some STs the CPU is near the front of the machine under the keyboard, where there is no room above the CPU for an upgrade board to fit in. Even if the shielding was cut, the board would still have to be quite thin in order to fit without hitting the keyboard.

And even if I was able to avoid all those difficulties and find a reliable method of fitting, I would still have to make several different versions of the board: one for the Mega ST's megabus, one for the STFM's DIP CPU, one for the STE PLCC CPU, and finally one for the Mega STE, with a couple of signals going to other places instead of the CPU.

And what's more, things get even worse if we are to consider fitting multiple upgrades to one machine. Generally an upgrade that would fit over the CPU would leave no provision for attaching another board in the same way.

The best idea I have thought of so far is this: I will make upgrade boards that connect to the megabus. Mega ST owners can simply plug the board in. Owners of other machines will have to obtain a simple adaptor board that fits over the CPU, or what ever method suits that machine, and gives the machine a megabus. And since each board would have a megabus "through connector" on it, it would be easy to plug in several upgrade boards if the user wanted to. This also means that, although a different

adaptor would be required for each machine, only one design of each upgrade would be requied. So it would be enough to get a stock of different megabus adaptors, and it would not be necessary to make four different versions of every kind of upgrade board. However this method would result in added complexity and cost.

I wonder if anyone else has some ideas about how to avoid these problems, without adding too much cost and complexity, and if possible, making it easy for someone inexperienced in the field to fit the board.

Any thoughts about that?

That's normal, the SM1224 is RGB (Color) only!
If you like to get the (Monochrome) HiRes.-Mode take an SM124 (71Hz)
(The one an only way to get HiRez)

Keep in mind that the "recycler.com" site requires a browser that
accepts "cookies" for the login to work properly. Just having the latest
CAB.OVL from Dan will not cause the log in to function correctly. Try it
with the demo version of CAB 2.7 and you will find that things work a
lot better.

FWIW - does anyone have information on when there will be an English
version of CAB 2.7 and will 2.5 owners have to pay full price for 2.7 or
will there be an upgrade?

Hi, Mario
I just fitted a Frontier/Marpet 4MB upgrade to my STfm. It was
pretty easy - clips into the MMU right in its socket, and intercepts
signals (probably data bus) at the video shifter. Except for defeating
memory banks, there was no soldering. The instructions accommodate
several configurations of STs. It was a good, professional job.

But of course, there is no more room for upgrades! It sits
between the floppy and the power supply. I suppose I could throw
away the top shield and gain some more room. Probably if I were to
do any more upgrades (except the serial port mod and a real-time
clock, which are very low-profile), I would have to go the peecee
case refit. I am not really inclined to do that, because the ST
case is ever so much more elegant and distinctive than a peecee
configuration.

A megabus connection would be nice (how is that different than a
VME bus?), as (if I understand right) it would permit the addition
of a more capable graphics adapter. But of course, there wouldn't
be room for THAT in the ST case, and at that point, I would be
rapidly approaching the justification point for a Milan!

IIRC the main problem is that some drives won't recognise a media change
if the serial number does not alter. Hitting Esc to force a re-read will
cure this on the desktop, but from within a program if you change disks
there is a possibility of corrupting the new disk if the OS doesn't
recognise a media change. With Selectric you can force one with Shift-F1
or a double-click on the drive button. But make sure no files are open
wen you foce a media change (install CHK_OFLS.PRG in AUTO)!

I love Microsoft I really do. I just crapped out their login
script and all it tells me is they don't have any default for their OBDC
drivers. Very helpful screen really.

I haven't gotten as far as their shopping carts yet to see if they
use cookies for that or not. I do have limited cookie support in place
for redirection and older versions of CAB. I've with held from writing my
own cookie routines out of respect to Alex. He's put alot of effort into
CAB and not supporting cookies fully with old versions of CAB get's a few
people to buckle down and give him some money that wouldn't have any other
way.

As far as the clock. Don't know what's going on there. I just
call a simple routine in CAB for that.

I am going to start using my 1040stf for music, and I have a Nord Lead, and I'm soon to be getting Cubase in the mail. The Nord is a great synth, but mine only has 4 voices right now (haven't gotten the upgrade yet), and I would like a program to do percussion with so I don't have to waste my synth voices on that. I heard ReBirth for Atari is good. Does anyone have any suggestions for a program that I can use to make samples that I can sequence with Cubase... and a way I can get it? I need a program that will work with 1 meg of RAM and no hard drive.

Also, is $120 a fair price to pay for a hardware modification in my ST so I can use a 4 meg SIMM? I know you can do it yourself, but I don't have the equiptment nor the knowledge.

Thanks,
Steve Klosterman

There aren't any players yet, but Petr Stehlik has made a conversion TTP program that can convert Real Audio into a raw audio form. Perhaps someone with more programming experience than I can use this to make a true Real Audio player that can be plugged into CAB? Anyone? Here's Petr's contact info:

Web: http://users.zln.cz/~pstehlik
E-mail: pstehlik@zln.cz

I do hope that someone is willing to take this and possibly work with Petr to make a true Real Audio player for us Falcon users! Please! Thanks!

Why would you need a boot from a floppy? It works fine under a MultiTOS
setup from hard drive. Like Uwe said though, its incomplete, and can be
unstable... Get NeoDesk/Geneva, Magic/Ease, Mint/Thing... ;-)

4991. Texel: Preview & Print Help

Newsgroup: comp.sys.atari.st
Date: 1998-08-23 00:00:00 UTC
From: cstanley@zetnet.co.uk
Message-ID: <6rq5jn$1d2$1@roch.zetnet.co.uk>
Source record: 94799

I have Texel v 1.6 r5 (a truly splendid spreadsheet), but lately
been plagued by a problem, not previously experienced.

Clicking Page Preview no longer displays a page. All I see is
the left border (or the row numbers, if selected). Clicking advance
page show the same each time. Indeed, the Page Number box insists I
have only 3 pages, though I have nine. Hence I cannot print out.
The same problems occur with the Demo version 2.

Yes, I have checked all the usual things: the Demo sheet and previous
sheets display and print properly. NVDI Drivers CPX has been checked.
I reinstalled NVDI, just in case. I have checked the printer driver
selection, just as before.

I am running MagiC 5.11 with NVDI 4.nn and no other parallel programs.

Groan.....
Charles.

I wish. Alledgedly What Jyoti Mistri did for his UK #1 was use
Breakthru. This can be used with a sample cartridge to give the holy
grail "MIDI plus audio" output. the program is slow and jerky after
cubase, so I what I did was save a .MID file from cubase then play with
the samples in breakthru.

Another solution is to get a sampler (recommended!)

Nelson

>if the serial number does not alter.

Hmm, not quite right, as a drive doesn't know anything about the disc
that has been inserted into it. The problem was/is that TOS looks for a
change in the write protect line which, AFAIK, all new drives buffer.
This means that TOS never sees the write protect go from enabled to
disabled to enabled and, due to this, doesn't think the disc has been
changed.

There was some mention about this some time back, although I'm not sure
if it was in here, .tech or .programmer, but at that time I looked into
the mediach() code and found no reference to the serial number. As I said
at the time, I think the serial number problem is a myth that started out
in the beginning of STs life, more then likely because of a (few)
reporters/reviewers machines having drives that hid the true w/p status
when a disc wasn't in the drive.

>and I'm soon to be getting Cubase in the mail. The Nord is a great
>synth, but mine only has 4 voices right now (haven't gotten the upgrade

I have a friend who has expanded the NordLead to 12 voices and he's very pleased with it :)

>yet), and I would like a program to do percussion with so I don't have
>to waste my synth voices on that. I heard ReBirth for Atari is good.

I don't believe ReBirth exists for Atari :(

>Does anyone have any suggestions for a program that I can use to make
>samples that I can sequence with Cubase... and a way I can get it? I
>need a program that will work with 1 meg of RAM and no hard drive.

That's probably very hard to solve...
First of all, you won't be able to run such a program together with Cubase, since Cubase uses just about all the processing power you have in the computer. Secondly, run it on 1MB without a harddisk - NO WAY! If you could use all of the 1MB memory (which you can't since you must have the software in RAm too), you'd be able to have about 12 seconds of mono sound in good quality - but there are many other problems too. I'd recommend that you try to find a used Falcon with Cubase Audio instead. Then ýou should be able to du just about anything. If you have 16MB RAM in the Falcon, you'll be able to use one or more Sampler-tracks or RAM-tracks for your drum sounds and loops. You'll still need a harddrive however, since every mono audio track uses about 5MB/minute - which means that if you use all 8 tracks in the whole song, you'll use about 40MB/minute!

>Also, is $120 a fair price to pay for a hardware modification in my ST
>so I can use a 4 meg SIMM? I know you can do it yourself, but I don't
>have the equiptment nor the knowledge.

Since you have the wish to use the computer for sampling etc, I'd recommend that you buy a Falcon instead and don't waste money on a system that won't give you what you're after. Visit my homepage if you want to know more about my studio, which is based on the Falcon with Cubase Audio.

With an adapter cable, you can also use a Multiscan or SVGA monitor (some old VGA work, but most don't) to get a monochrome picture (yes - monochrome even if the monitor is a color monitor). If you need a description, please tell me and I'll mail it to you.

Thanks for the offer. However, Apple II emulator users have no
problem with mis-links, etc.. They can go to ...

Asimov- #1 archive of Apple II games and utilities in
emulator DSK and file formats; plus emulators and emu info
ftp://ftp.apple.asimov.net/pub/apple_II/

or

Asimov-GS- major archive of IIgs software
ftp://apple.cabi.net/pub/applegs/

Hi All

As promised, return to officially advise one and all that WAG will indeed continue. It will be in a slightly revised format, Starting 24 Oct 98 it will move to a quarterly format meeting at the Whitchurch Fire station between 2.o clock and 7 o clock, i.e. going back to where we started.

Anyone who can turn up will be most welcome and I can ensure you of an enjoyable afternoon.
membership fees will be, £2.50 per meet or £10 per year, your first meet will be free. We supply the tea and coffee as much as you can drink and if you're lucky you'll get biscuits too ;-))

Come and join us and enjoy the fun.

Regards Mick

5000. What PageStream Driver? Epson Stylus 500

Which printer driver do I use with an Epson Stylus 500 in PageStream 2.2SE? The printer understands Epson ESC/P 2, or IBM X24E.

If the driver isn't with the package...where can I find it?

I did try some of the regular epson 24 pin drivers, which work okay, but don't go any higher than 180dpi :/

Can ya help me?

Thanks,
Brian

Rebirth is that TB303 emulator right ? I don't think it exists on the Atari.

>Does anyone have any suggestions for a program that I can use to make
>samples that I can sequence with Cubase... and a way I can get it? I
>need a program that will work with 1 meg of RAM and no hard drive.

Audio is pretty out of reach of a plain 1040ST. You would need a Falcon for
anything that involves generating sounds. The STF doesn't even have a stereo
output connector.

There are several software synths available for the falcon. Some of these
will run quite well with cubase.

However, If all you want is percussion tracks, you could probably get
yourself a MIDI drum box or an old expander for the $120 you want to spend
on a memory expansion.

stated:

> * Is there a "TOS" switcher for the 1040 like the 'kickswitcher' on
> the AMIGA ? If so, how much migh they cost ? And how easy are they
> to use?

Yes, the are the same thing as a Kickstart ROM switcher. No idea about
the cost or ease issues, I never had a need for one myself (not much of a
game player, and the only compatibility problem I can recall having
before moving to a Falcon030 was with Epyx's Art & Film Director, which
wasn't an actually an OS problem, either).

> * Do NTSC machines have problems running overseas software, obviously
> meaning PAL stuff ? If the answer is 'yes,' what are the possible
> solutions ?

Unlike the Amiga, the PAL and NTSC modes have the same number of vertical
lines (200) per screen. There might be some timing issues with some
games, but once again, I am lack the qualifications <grin> to delve into
that.

> * What kind of ACCELERATORS are available for the 1040 ?

As far as what is available now, I am uncertain. ICD made the Adspeed
(both ST and STe versions), which was a cached 16Mhz 68000 accelerator.
There were also the T-16, T-20, and T-25 (also cached 68000's), the Pak-
30 (68030 accelerator), and the T-28 (68000) from overseas.

I'll admit it has been a while since I sold my Practical Solutions Monitor Master, but I would have sworn the switcher-to-ST cable was integrated. Perhaps you have a different brand, or they made more than one version, however.

> Any suggestions as to where I could get the connectors
> to make a cable? or any other helpful suggestions ?

Best Electronics would certainly have the connectors, and very likely double ended DIN-13 cables that carry all the lines. AFAIK, they do not have a web site, but their phone is 408-243-6950. (This is from an old Rev9 catalog, so if it does not work, it may be due to an area code change. You could always get the number from information for San Jose, although I expect someone will post a corrected number here).

Hi Nick,

well, I don't agree completely: with Atari PSU's you'll never know whether or not it can take another item without blowing up: add some more memory and the PSU fails, add one more HD and "BANG!", Goodbye PSU. Glad I got this tower with a 200W PSU plus fan to accomodate my CD-ROM, 2nd harddrive and Syquest-44. I only hear the fan when I turn off my TT... The noisemaker here is the Syquest-44 when it's turning :-) but the TT isn't that environment-friendly :-)

Mmm .. if I do this I avoid the loop when attempting to set the screen fonts in QED 4.5 but no font-selector is called up. Neither will QED 4.1 or aFTP work.

I HAVE to set:

#_ENV FONTSELECT=MAGCUFSL

AND activate MAGCUFSL.PRG to get QED 4.1 and aFTP to work properly but this then buggers-up QED 4.5. Grrrr!

Hi Dan!

I've had this problem several times on my Falcon running Cab 2.5
under MagiC 5. I was using v1.2805 of the Cab.ovl file. I have now
switched yesterday to v1.310beta, but haven't yet seen this happen.
It is annoying though, as I find I have to abort Cab using the Program
Manager, and then reload.

Cheers!

James

5021. Ghostlink & MagiC

Newsgroup: comp.sys.atari.st
Date: 1998-08-23 00:00:00 UTC
From: apm.byl@thefree.HAIRnet
Message-ID: <35e03954.471573@news.thefree.net>
Source record: 94880

Does anyone know if it is possible to get Ghostlink to work with MagiC v5.11 ? I've got it to work with MagiC v2 in the past but it doesn't seem to get on with MagiC v5.11.

I've assigned my PC's drive C to be drive R on my Falcon. If I select "Install Drives" in Magxdesk I don't get an icon for drive R. However there is an R entry under drive U but it appears as a file rather than a folder like the other drives.

If I run Thing I can get a drive R icon, but if I select it I get an error message stating "Can't read drive R:\! (-46: invalid drive)". If I select R using the MagiC file selector I'm given drive U instead.

The odd thing is I can access drive R using the MCMD command line shell and successfully copy files from my PC. So it seams that Ghostlink is works with MagiC at a low level but has problems with the GEM parts of MagiC.

This means you will spread illegal copies. BTW, what's the use of using
a TOS version that is known to be incomplete and instable?

You should be able to find an STe (easily and cheaply expandable to 4megs
with 1meg SIMMs), or perhaps even a Mega 4 for close to that price.

If no one offers up one for that price, you may want to post a "WTB:" ad
here, and/or check out some of the auction sites.

> hopes, but alas, it didn't work... All I got was a jittery cursor.
> Wouldn't it be easier to convert an Amiga mouse?

Yes. An Amiga mouse can become an ST mouse with a slight rewiring job. As
a matter of fact, most third party Amiga mice (I.e., Wizard, Golden
Image, Alpha Data) take advantage of this and provide an "ST/Amiga"
switch on the bottom.

If you Amiga mouse is the original equipment, however, you will either
need to rewire it, or if you do not wish to alter it, build an adapter.
You should be able to find the pinouts of the mouse ports for both
machines at:
http://lwp.ualg.pt/docs/hwb/menu_Connector.html

> Another posted gave the pinouts to build a RGB-to-composite
> cable, and I think that's what I'm going to do, but I'll
> need to find that damned RGB connector first (odd size).

One way to bypass this problem is to bypass the 13-pin port. That is,
drill a hole in the back of the ST, add an RCA jack, and wire it to the
backside of the DIN-13 to the pins for composite and ground.

Unfortuantely, the ST's composite output is not that great, although it
should be an improvement over RF. Here in the US, Practical Solutions
made a device called "Videokey" as I recall, which converted the RGB
signal to composite, and offered much higher quality composite output. As
it is a fairly light device, if you see someone advertise one, you should
be able to have it shipped to you without breaking the bank, providing
you can work out the payment issues, and that NTSC is your local video
standard. (Doesn't Brazil use some form of PAL that runs at 60Hz instead
of 50Hz as in Europe)?

> So, I went down to my local Fry's and got a new EZ Flyer 230 for $149
> (SCSI / external).

I noticed in the latest Computer Shopper Computer Warehouse had both the parallel and SCSI versions of the EZ-135 listed for only $79.95, and checking their website confirmed this was not a misprint, and no rebate or other gimmicks are involved. A check of another dealer (Harmony Computers, as I recall) showed a price of $99. Oddly, a check of SyQuest's own site still pegs the SRP at $149.

I am tempted to order one right away, but with the spending spree I went on recently, I think it should let it cool for a while. I just hope this is not a limited quantity that they will run out of soon.

Dang! I wish this message a couple of months ago. I had purchased an
external SCSI EZ-135 for $50 that was in excellent condition, but refused
to keep a cartridge. I shudder to think that if only I had removed the
mech and hooked it up to another power supply, it might have worked.

I ended up sending it back to the seller for a refund, and they
apparently intended to use the case and power supply for other purposes.
I wrote them after seeing your message to see if they had scrapped the
mech, but have yet to hear anything back.

My apologies for the late reply, but unless someone sent you the answer
via e-mail, I appears you have not gotten an answer to this one yet.

Yes, it is possible. With most, if not all versions of the SC1224 (there
were 3), you will need to invert the horizontal and vertical sync signals
coming out of the Amiga's DB-23 video port. Otherwise, it should be a
fairly straightforward hookup.

> If possible, how is this done?

I believe the usual approach to inverting the sync is to feeding it
through one side of a NOR gate. Chips with up to 4 of these are available
inexpensively at most electronics dealers, and fortunately, the Amiga
video port has pins dedicated to power outputs (5V needed in this case).

If you're talking about XaAES and OAESis (I don't know of any other free
AES replacements) they will always be free (GPL or similar licenses),

AFAIK, Atari's MultiTOS AESes (4.1 and earlier) were never free, but perhaps
that has changed. They can at least be found in various places...

I spent quite some time on XaAES early this summer and the new beta7+
works a lot better than previous versions. I don't think you can find
that anywhere but at my ftp site yet, though. There are a couple of test
versions available as binaries, but beta7+ itself is a source only release
at this point (I was hoping some other people might do a few things during
the summer). Before doing a new official binary release, I'd like to get
the rectangle event checking working again (the code from beta7 locked
up with some programs (for example with dialogs in Thing)).

I've noticed at CPUsed (a popular computer shop in Toronto featuring
used and new Macs) that they're now selling the EZ135 for $99.95 CDN (
$1 CDN = $.65 US). And I found a shop in Toronto that's selling the
Nomai EZ135 compatible cartridges for $13.99 CDN (that's with a coupon
found in all the local free computer monthlies, but they've been running
that special for several months now).

BTW, how hard is it to remove the mechanism from the case - I
wouldn't mind installing it inside my homemade SCSI case.

I have to add to Mark's comments:

The show was great. The vendors had some excellent stuff for sale. The Jaguar System Test board I bought is great. Now I just need to figure out how to use it.

There were a lot of past Atari employee's (engineers and programmers, not marketing bozo's). Jerry Jessop, Dan Kramer (5200 trackball designer), Dave Stagus (my spelling is bad; programmer for Exidy's Venture arcade, Jaguar ROM programmer, 2600 programmer), Rob Fulop (2600 Night Driver & Missile Command, Night Trap and Sewer Shark programmer), and many more. They were all great individuals to speak with. They were happy to speak with fans and were right there the whole time enjoying the show with everyone else.

Curt Vendel had an excellent display of some very rare Atari stuff. The self-centering 5200 joystick, a early design of the 1450XLD, a 1400XL with the actual name plate on it (mine is missing that), cartridge prototypes, and much more.

They had a museum that was incredible. One of the neatest things I saw was a piece of hardware that was the actual court evidence used in the law suit against Coleco by Atari. It was a Colecovision 2600 adapter that was hooked up to a board containing basic resistor/inductor/capacitor and other components. This was used as proof that Coleco had copied the 2600 and that the Colecovision was not actually running the 2600 software, it was being used as a television interface. And that was just one of many rare items they had on display.

All kinds of arcade games to play that were set on free play!

Keep an eye out, because there should be another one next year. This is one not to miss!!!!

One question-- did you whittle down the auction footage as well?

The show was great, the speakers excellent, and the museum was wonderful.
However, 90% of the auction was either junk that someone should have known
better than to try to sell, especially at the minumum bid price, or things
that were outrageously overpriced.

It was great to realize that not all of us collectors have lost our minds and would pay any price just because something has a Fuji symbol on it.

A plastic Atari cartridge organizer for $50? I don't think so!

Mark

> Yes, I have the same model, it works without problems on all Ataris
> and also on the LAN port of the Mega STE and Falcon030.

I bought the cable which is shown in the ZyXEL manual and
installed STiNG now, the dialer works fine and I can use a
tiny telnet program.

But:
As soon as I use CAB the whole machine stops when loading an URL
and I have to reset it all
(A dialog with "Fehler:
Status: Connecting to host..."
pops up and then CAB never returns).
(I tried CAB 1.4, 19.9.1996; plus correct installed CAB-OVL 1.2904, 18.4.1998,
STiNG Vers. 1.12).

And another problem: if I switch on the ZyXEL and then the Mega 2
the RxD and TxD lights start to flicker as soon as the desktop
appears (as if the modem is receiving or sending something).
After a few secs the ATARI throws 3 or 4 bombs.

I'm not sure whether this is a hardware problem or a problem
of software version mismatch.

Any pointers ?
Which ftp programs do you use?
Which telnet progs do you use? (I'm not 100% satisfied with the one I got)

Please Cc answers to my email address
Thanks in advance
ME

Following for sale or trade: (Prices Negotiable)

NOTE: WILL TRADE ANY OF THE ITEMS ON THIS LIST FOR PC EQUIPMENT-Hardware and/or Software

Hardware-

ALL hardware is in good to excellent 'used' condition and pre-tested before shipping.

1040STf's-(still going strong!)1meg-used/tested.....$50ea.
Includes Atari Mouse or Marconi/Marcus 3 button track ball, your choice.

Atari SC1435's -14" stereo RGB monitor, headphone-jack, video cable, used/tested...$65ea.

Atari SC1224 12" Color Monitor - used/tested..$40.

Atari System: 1040STf + SC1435 + Atari Mouse or Marconi Track Ball-all items used/tested.......$100.

Atari PCM124 12" Monitors-New-$20 ea. Original box and manual.
Believe these were used on 286 type computers and Atari's short lived PC. Two units available. 7-Pin video cable.

** LYNX STUFF: **

LYNX II -used but works great except the external speakers do not work. Need headphones to hear audio. $20

LYNX Kit Case-Carry Case-NEW
12"wide 9 1/4" tall 4 1/4" deep-$12

LYNX AC Adapter- New -120V 60Hz-$8

LYNX battery pack-holds 6 'D' Cells-excellent shape.-$8

LYNX NAXI Power Pack-rechargeable, includes A/C charging unit.
Used but ni-cad batteries are in good shape, still hold a good charge. Asking $10.
LYNX Sunshield- $5

*** LYNX GAMES ***
Used but like new
All games have original box and instructions except O.E.M. games listed:

Baseball Heroes...$10
BattleZone 2000...$12
BlockOut.....$10

Blue Lightening.....$15
Hockey.....$10
Joust.....$12
Shanghi.....$12
Steel Talons.....$10
Super Asteroids/Missle Command...$15
Toki.....$10
Warbirds.....$20

O.E.M. Games - full instuctions/no box

Batman Returns...$8
Hard Drivin.....$8
Shadow of the Beast...$8
S.T.U.N. Runner...$8

ST Software: all games are in the box with manuals

Hardball-Accolade-baseball sim-$5
ST Pool-Shelbourne-rack 'em up-$5
Map & Legends-The Cartographer + Data Mao Collection- $10
Gold Rush-Sierra-adventure sim-$5
Flight Simulator II-Sublogic-with Scenery Disk #7-$10
RISK-Virgin-Word conquest game-$5
Their Finest Hour-Lucus Films-The Battle Of Britain-air combat sim-$5
SCRABBLE-Leisure Genius-crossword game-$5
EZ Test Writer-$5
DragonScape-adventure game-$5
Metro Cross-Epyx-scrolling skateboard game-$5
Data Diet-Disk compression program-$5
StarGlider-Firebird-3D combat-air to air/air to ground sim-$5
Final Assault-EPYX-mountain climbing adventure-$5
Transputor-cool 3D marble action game-$5
LED Storm-Road race with lazers-$5
Crash Garrett-1938 adventure game in FRENCH-$5
Championship Wrestling-Epyx-Wrestling Mania for the ST-$5
Phantasm-space shoot-em up-$5
Project Neptune-Epyx-James Bond type adventure-$5
Renegade-Taito-street fighting-cool game-$5
Prime Time-make your own TV shows-$5

Following-no box OR doc's

Warship-Stratigic Simulatons-$2
Read & Rhyme-Unicorn-$2
Math Wizard-Unicorn-$2
The American Pastime Baseball Simulator v3.01-$2

That's All For Now.....

Hey Mark!

I agree with that! It was pretty funny how nothing sold, but I wish there had been a little more heckling at the prices. The lady who bought her 10-year-old son the Atari pin got bit on the ass. Hopefully people won't take that at the going rate and start upping their prices accordingly. Especially after the other pin went to Nowheresville at $25.

Mario Becroft skrev i meddelandet <8SW1CUG@tos.pl.net>...

:I have been designing some upgrades for the Atari ST, STE and Mega ST(E)
:machines, but it seems difficult to find a universal way of connecting the
:upgrades inside the machine.

The blitter has the complete address and data bus drawn to one compact area. Most ST:s and all STE:s have either holes for a blitter socket or a
socket and blitter chip built in.

If you make a design that would go into the holes for the blitter socket you'd
cover maybe 90% of all AtariST/STE:s. And you could just incorporate a new
place on your board for that blitter chip.

This solution would of course mean that you'd ruin the original socket (if present) and provide a new one on your PC board.

Anyhow, the area around the blitter is usually roomy, and if you elevate your
design somewhat, you'd go free from the diodes and resistors on the motherboard.

Things to attach could be a MC68882 FPU, graphic expansion, a DSP subsystem
or whatever you like. Or an IDE interface...

With this solution you'd exclude the oldest 520 and 1040 models and also those
motherboards that expect a surface mount of the blitter (or its socket).

But maybe you should consider the ACSI port instead? It is present on all
machines exept the Falcon and it is fast enough for most applications.
But you'd have to have at least one cleaver programmer to write the device
drivers for you...

I did a halfhearted try once to read the contents of an old EPROM through
some clever wiring and programming, but it failed and I haven't tried it again... :^(

The same goes for the cartridge port which is even present on the
Falcon,
and probably even faster than the ACSI. However, every write operation
would
take twice the time of a read operation.

Actually I was planning to attach my IDE interface to this port at
first, but I don't
know of any driver that supports that? There was an old CD player design
where you could do this, but they didn't sell harddisks.

Maybe I could talk those dependable Germans in to writing their drivers
to
support an IDE harddisk on the cartridge port? Achtung anyone?

Charles - the program itself may have become corrupted (or a RSC file).
Try reloading from the program disks or a recent backup. I have this
happpen with some regularity on Lotus 123 and my PC at work - the
program *.exe file getting fouled up. It will load and seems to work
fine, for a while, then it just locks up. Reloading from my backup
restores things for a couple to three days. Happens with Win 95 also :).

This is true...
Depending on your needs, you might opt for an older/smaller version
if you don't intend to use a unix like file structure. KGMD in its
present form does require a minix partition be made however.

My understanding is that this is a feature....not a problem unless
you try to use the disk in a messy DOS machine. Added to avoid you
messing up during disk swaps. I.E...forget to swap the disk and
click okay to format/write/etc, a disk.

Julian F. Reschke <fjr010@email.mot.com> wrote:
> I doubt that it has anything to do with C. The startup codes for Pure C
> and GCC (MiNT-Lib) have been able to process filenames with blanks
> (using the ARV method) for ages.

This true for the MiNT-Lib's startup code, but for "plain" Pure C, you explicitly have to use pcvstart.o as startup code. Pure C's default, pcstart.o, has no support for ARGV (this is at least true for 1.0, but I doubt it has change in 1.1, though I haven't checked it).

Ciao

Thomas

Well, I'm tired and got home just a bit ago but I wanted to say few
things.

The show was great. Kudos should be put out to everyone involved
especially Richard Tsukiji,Keita Iida, Don Thomas, and John Hardie. They
all put on a most excellent show. Of which I was more than pleased to
shoot over eight hours of video to whittle down to a two hour video. The
speakers were engaging, the exhibits were interesting, and the
atmosphere was light. Everyone involved seemed to have a good time.

As for an indepth report, you can read it tommorrow at NGO.

As for the Video, I will update my page with some stills from the video
once I've logged the tapes and gotten some sleep. But here's what I can
tell you to wet your appetites.
-Direct Feed of Hyperdrome(Lynx)
-Direct Feed of TNT Terry(lynx)
-Direct Feed of Ponx(lynx)
-Direct Feed of Battlesphere(Jaguar)
-All the speakers
-The auction

When I use Win95 disks I see a scrambled directory, not one single filename
is ok. This will probably be fixed in next BigDOS, v.9. What is HideVFAT?
Only for MiNT or?

>Writing to a Win95 disk with an Atari can mess up the long filenames,

I upgraded to NVDI 5 and Magic 6 and I can no longer use my printer. It's a pretty much standard printer that is known to be Epson LQ 570 (or is it 510) compatible but all I can do is to get it drawing blocks of black. Why? And how do you use the built in fonts? It must be possible. I tried to use Papyrus and it doesn't cope at all. And QED doesn't do much either. I get this awful Win95 complexity feeling from my new setup ... nothing wants to work no more.

Date: 1998-08-24 00:00:00 UTC
From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <35e153f6.0@d2o29.telia.com>
Source record: 94823

Somebody had a package of replacement fonts so you could get the look of all other browsers in Cab. I beleive it was Monaco and Courier and such, but where is this package to be found?

Regards, K.Hampf
e-mail: k_hampf@yahoo.com

5061. #_ENV <what?> C:\ST-GUIDE.APP

Newsgroup: comp.sys.atari.st

5062. NOS.046 is OUT ! Take it !

Newsgroup: comp.sys.atari.st
Date: 1998-08-24 00:00:00 UTC
From: mike@bbsgate.interware.R.E.M.O.V.E.T.O.R.E.P.L.Y.it
Message-ID: <4846_mike@bbsgate.interware.R.E.M.O.V.E.T.O.R.E.P.L.Y.it>
Source record: 94825

Finally NOS.046 is ready ! I am going to put it on:

ftp.interware.it/users/mike/pub
or go to:
www.interware.it/users/mike
and look for the "public download directory" at the beginning of the page.

You can also request the file at my BBS, +39-40-768412 fidonet+nest
2:333/608@fidonet.org
90:700/104@nest.ftn

I can also send you the files by email, tell me what version you need.

nos046.lzh is the 68000 binary+readme
nos04630.lzh is the 68030 binary+readme
nos046_s.lzh is the sources archive

- I added the ability for nntpcli to try GROUP and STAT commands after a failure occurs with the NEWNEWS command, provided that NN_USESTAT was #define'd at compile time. It seems that NEWNEWS is disabled by some Internet Service Providers (ISPs), who think it adds overhead to their NNTP server, and who reason that NEWNEWS is not needed by a news client. Nos can now use typical news client commands to recover from a newnews error, BUT the news groups must be explicitly named, that is, the names must not contain a '*' or '!'. The article numbers for each host and newsgroup are stored in a new file, named "<area>.rc", kept in the same directory as the associated . I modified nntp_job() in nntpcli.c and added statnew().

- I finally included the pop3 mail client, it works as in standard nos doc, try "help popmail" to know more or read here, note that 'pop' command and 'pop2' protocol are not implemented in Atari NOS (do you need them?):

=======
popmail
=======

[N.B. This is different from the 'pop' command].

The Post Office Protocols (POP2 and POP3), are mail protocols designed for use in networks containing hosts that are normally turned off when they are not in use. In this environment it is not possible for an SMTP mail server to deliver mail to these hosts because they are not always available.

The solution to this problem is to designate a mailbox server that is available to the network at all times and can accept SMTP mail for other hosts. When a host comes on-line it uses POP to

access the mail in its mailbox(es) on the mailbox server.

The advantage of using a POP server at an area mail gateway is that when mail arrives at the gateway for a station that may not be available, the gateway does not have to waste time trying to establish a connection with that station. Instead it accepts the mail and places it in the addressee's mailbox, just as if the addressee were a normal user on the gateway system (that is, this is the same thing that is done with AX.25 BBSs).

As POP2 and POP3 are different and incompatible protocols, both the POP2 and POP3 servers should be started, to handle all POP requests from clients.

The POP server requires one data file called /popusers.

The POP protocols are very simple, with minimal error handling. When an error is encountered, an error message is generated and then the connection is terminated. You then have to re-establish a connection to continue.

---

popmail addserver <host> [<seconds>] [<hh:mm-hh:mm>] <protocol> <mailbox> <username> <password>

Add <host> as a pop server. When <seconds> is given, a timer is started to query the host with that interval for mail.

If not specified no quering to the pop host will be started. You have to do that manually with a 'kick'.

When <hh:mm-hh:mm> is given then only in that exact timeframe are queries to the host made (allowed).

Protocol is either POP2 or POP3, depending on the mail service the host is providing. Note: pop2 is superceded by pop3.

<mailbox> is the mailbox name on the host from which mail has to be picked up.

<username> and <password> are this system's validation parameters for the host (in /popusers).

Note that on entering this command the host name is looked up. If non existent an error message is presented.

>> Example: (all on one line):

popmail addserver ns9bob 1800 00:00-03:00 pop3 ns9liz ns9liz lizpasswd

---

popmail dropserver <host>

Drop host from the list of pop servers to be queried. All

references to the entry are deleted from the current system.

>> Example: popmail dropserver ns9bob

---
popmail kick

Kick the local POP client, to get mail from the server. This
command is needed when no interval is specified with the 'popmail
addserver' command.

---
popmail list

List the current popmail server table.

---
popmail quiet [on|off] Default: off

Display or set the POP quiet flag.

This flag determines whether the bell sounds when the system
announces that incoming mail has arrived. When quiet is set to
'off' you hear the bell.

>> Example: pop quiet on

---
popmail trace [<level>]

Display or set the trace level of POP sessions.

<level> = 0: no trace
1: serious errors reported
2: transient errors reported
3: session progress reported

All trace output goes to the session log file.

* ---
* # Example of setup for the POP3 mail client
* popmail addserver 151.99.226.3 POP3 mike mike mikepw
* #popmail quiet on
* fkey 62 "pop kick 151.99.226.3\n"
* ---

- Enhanced Help function. Now you can use '?' as before to list available
commands and help <command> <subcommand> as long as you put *.HLP files
in the help directory, same sintax as ftp.hlp, I am giving some starting
help files with 0.46, how do want to complete the job ?

- I also modified few things like the fkey command, to catch the correct keys
from the Atari keyboard, please check how it works.

- Please send me your impressions and requests, maybe I will be able to go on with the project if enough people is interested.

Join the NOS mailing list sending an email to net2net@bbsgate.interware.it with subject: "SUBSCRIBE NOS".

Talking of hi and low res, will cubase run in non monochrome res, or are there sequencers for the atari that will? I don't have a colour monitor, so to run in colour I need to run Atari->SCART into a TV, but it would be nice to be able to avoid changing monitors all the time. Either that or a simulator I suppose (but I have a very old 1040, and a lot of stuff seems not to run on my old version of TOS)

Thanks

Aaron Turner

> Only for MiNT or?

Quote from hidevfat.eng:

-- snip --
HideVFAT dated 07/16/98

What's that?

HideVFAT is a small utility for the Auto-folder which helps you get rid
of the problems with SingleTOS, caused by the additional directory
entries created on VFAT partitions.

In short, if you experience at least one of the following symptoms when
using VFAT partitions or disks with SingleTOS, simply put HideVFAT into
your Auto-folder, and you're not bothered again:

- The desktop and/or your file select box displays files with strange
names (almost always starting with "A" or "B") and totally weird size
and date information
- Copying of entire folders fails because the desktop (or whatever
program is used) tells you it can't read files with very strange names
- Your drives / disks have a very strange volume name, even though you
never set any

HideVFAT is also useful for MiNT users, but has to be run /before/
MiNT, as it's possible that not all problems are cured otherwise.

Of course, it doesn't make any sense to use HideVFAT with MagiC 5 and
better or MiNT with VFAT-FS, but it doesn't cause any harm if you do so.

Very important (with or without HideVFAT): *never* create or change the
volume label of a VFAT partition with SingleTOS, as this will destroy
all the long filenames in the root directory!
-- snap --

> >Writing to a Win95 disk with an Atari can mess up the long filenames,
> >though - but that's problem of TOS, too. Anyway, in no case the actual
> >data is corrupted.
> But a directory might be totally screwed. All entries lost.

I never heard of that and doubt it's possible. You lose the entries for
the /long/ filenames, but not the actual file entries. And for the
scrambled directories: Give HideVFAT a try,
ftp://ftp.cs.tu-berlin.de/pub/atari/incoming/hvfat_r1.lzh

Ciao

Thomas

Try EASE from the MagiC 2 package (if you have that one). It works.

Cubase, as well as most "serious" programs, requires a 640x400
resolution, so you need a hi res monitor. A hi-res emulator slows down
the machine a bit, so that can cause problems with timing-intensive
programs like Cubase.

You sound a bit mixed up with resolutions/monitors, so here is the run
down:

monochrome=Hi-res (640x400/2 colours) => SM124/125/144... monitors only,
or an emulator such as Sebra.

colour=Low-res (320x200/16) or Mid-res (640x200/4) => TV or colour
monitor.

Cheers,
Nick

Jack Berg Sales was an Atari Distributor in the 1980's and has discovered a lot of unsold merchandise from that era.

First come first served They're going fast. Very Limited.

Many other Coleco, Atari, and Intellivision.

Call if interested (915) 532-4519 or email order and it will be shipped on Monday.

No consoles but a lot of Intellivision games in Brand New Condition - Never opened never played:

Imagic: Activision
Coleco

Dracula Pitfall
Lady Bug
Ice Trek
Donkey Kong
Demon Attack Beamrider Carnival
Atlantis The Dreadnaught Factor Mouse Trap
Swords and Serpents Worm Whomper
Dragonfire Happy Trails
Stampede

These are all $ 12.00
All Brand New. Many Atari and Coleco titles as well.

Much Coleco, Activision, Parker Brothers and Arcadia Starpath (Superchargers and Carts) for Atari 2600 and Coleco for Colecovision.

Call if interested. (915) 532-4519We have the following titles NEW in the box for Colecovision:
Never opened - Never Played
Most for $12.00
Activision for Colecovision: Coleco for Colecovision:

Beamrider $ 12 Donkey Kong Jr. Black
Jack
Pitfall 12 Donkey Kong
Mouse Trap
River Raid 12 Looping
Gorf
Zaxxon
Cosmic Avenger
Pepper II

Space Fury
Venture
Lady Bug
Carnival

We also have the Coleco:
Turbo w/adapter
Atari 2600 Adapter for Colecovision

For Atari 2600:
Never Opened - Never Played

Parker Brothers: Coleco for Atari 2600:

Sky Skipper Zaxxon
Reactor Mouse Trap
Amidar Smurf: Rescue from
Gargamels Castle
Star Wars: Jedi Arena
Star Wars: The Empire Strikes Back
Strawberry Shortcake
Spiderman
G I Joe

Arcadia (Starpath) : Atari for Atari
2600

Supercharger w/ Phaser Patrol $ 20 Defender
Communist Mutants from Space 15 Asteroids
Fireball 15 ET - The
Extraterrestrial
Suicide Mission 15 Star Raiders w/touchpad
Escape from the Mindmaster 15 Bridge (1)
Dragonstomper 15
Killer Satellites 15

Activision for 2600:

Kaboom

There are also some joysticks and extension cables for Atari and some
promotional items such as ATARI T-shirts ($18) and Ms. Pac Man dolls ($ 8.).

Please call if interested.

THANX

I don't get this one but I cannot use the font selector under
Magic/Magcdesk. I have told Crhistian about this and he says there
were some errors in library linking when he constructed v4.5. He says
he will release a corrected 4.51 shortly.

>#editwd=D:\EDITORS\QED-400

The problem was in o.inf.

I was using *editwd=d:\tmp* instead of *editwd=e:\qed*

If I use the latter Qed hasn't problems to find his .rsc file.

As editor I prefer Qed but because I can't use text macro's (*.krz) which contains
more then one line I don't use it as an editor with Okami.

The qed.cfg from 4.10 isn't compatible with qed.cfg v4.50.
Furthermore from what I've read in Mausnet QED 4.50 seems to contain lots of bugs.
The author is working on it.

Anyway I'm back to Qed 4.10.

It all depends on whether your PC is at home with your Falcon or not.

If it is then you can link both machines by a cable and a software
solution called Ghostlink. This basically makes the Falcon able to
access the PC's drives and CD Roms as if they were its own, therefore
being able to copy the files over.

If both machines are at different locations (such as one at work and
the other at home) then its a bit more problematical. If you've got Internet
access on both machines then you could send the files as email. Or you
could get a SCSI Zip drive and use it on both machines, these have
cartridges that hold up to 95 mb of data.

Cheers!

James

I am moving away from 1985-1991 Atari items and focusing more of my efforts for the Atari Historical Society onto the 1972-1984 Atari years while still paying attention to any Atari 8-bit efforts, the Lynx, Portfolio and jaguar from the "Tramiel Era", so enough yapping....

For Sale: 1 Atari Microbox Falcon030 Motherboard Rev 1a, has all standard Falcon ports, takes 1 SIMM module, has on-board floppy and IDE controller, solder-points for 1 VME slot, needs 68030 chip.

Only 2 fully populated units are known to exist, this is one of them. I will part with this item for $400.00 firm plus shipping.

Hello Everybody,

I know that a filesystem with LFN exists for MiNT: minix.
AFAIK it is not compatible with the MaGIX XFS with LFN.
That is compatible with W'95/98, the file system is callec Joliet.

Does a Joliet XFS exist for MiNT?

Greetings,
Jan

I hope someone can keep track of this. Sounds like good material
for a port of promising software.
==========
AbiSource cross platform productivity apps_____
http://www.convergence.org/news/misc.html

At the Open Source Developer Day on Friday 21st AbiSource announced
its entrance into the open source community. AbiSource will develop
cross platform, open source, desktop productivity applications,
including a word processor, spreadsheet, and other tools.

Source code for a developer's release of AbiWord for Linux and Windows
platforms is available for download now. AbiSource will soon release
additional applications, including a spreadsheet, database, and other
tools, in a package called AbiSuite.

AbiSource hope to derive revenue from sales of support services, end
user boxed applications, and printed user manuals, following the
example of Caldera and others which operate in the open source market
on a similar basis.

AbiSource are filling an area which has until now been rater lacking
in terms of open source area, that of major productivity applications.
A larger set of every day office applications will hopefully help Linux
and open source software continue to advance into mainstream computing.

Minix-FS.

> AFAIK it is not compatible with the MaGIX XFS with LFN.

MagiC uses VFAT, and the latest MiNT beta has VFAT support as well.

> That is compatible with W'95/98, the file system is callec Joliet.
>
> Does a Joliet XFS exist for MiNT?

Joliet is an extension of ISO9660 for long file names on CDs. SPIN
supports this both for MiNT and MagiC (check
http://www.muenster.de/~reschke).

> unstable... Get NeoDesk/Geneva, Magic/Ease, Mint/Thing... ;-)

Well, MINT is so slow on a FALCON that I prefer use the simple TOS...
It seems that some people don't appreciate that TOS 4.92 enters public
domain.
I do not share their opinion but I respect it, so I won't put this TOS
version on lip6 or my WEB site.
I use it on my Falcon (as I was a registered developper, it's OK), happy Uwe
?
(note that I use HDDriver and I've bought it !)

Package Price: $400 (US)+freight, or best offer. I would prefer to sell it all as one package, but I may entertain offers for bits and pieces.
Inquiries should be directed to: WFChris@aol.com

The package includes the following:
Hardware
1 Mega ST4 & Keyboard
1 SC1224 color monitor
1 monitor switch box
1 mouse
1 joystick
1 MouseMaster switch box
1 ICD 44 mb Syquest drive
1 SF314 external floppy drive
1 Cannon BJ10e bubblejet printer
1 Supra Modem 2400 (ok, its not very fast, but it was good enough for GEnie)
and, of course, the various and sundry cable/cord necessary for all.

Software
Applications:
Calamus v 1.09.6 & 1.09N
Flash
Clean Up ST
Word Perfect
Degas Elite
Data Manager
Word Flair
and various utility programs such as NeoDesk

Games:
Maniac Mansion
Empire
Star Wars
Gauntlet
Warlock
ArcticFox
King of Chicago
Thunderbirds
SimCity
Ancient Art of War in the Skies
Steel Empire
ShadoWorlds
Balance of Power (1990 ed)
Rorke's Drift

Railroad Tycoon
Storm Master
Populus
Power Monger
War in Middle Earth
Defender of the Crown
Lemmings
Hitchhiker's Guide to the Galaxy
F-16 Combat Pilot
Star Glider
Jeanne d'Arc (in German)
The Secret of Monkey Island
Autoduel
Hard Drivin'
Civilization
Realms
Their Finest Hour: The Battle of Britain
Frontier: Elite 2
Thrid Riech
Pirates!
and Chronoquest.

Try Christophe Boyanique's MegaFli v1.00, which will segment a large file into smaller parts for transfer to floppies. The program has both TOS and DOS executables, so you can transfer large files from PC-to-Atari or vice versa. I've used the program only once and it worked as advertised doing a TT-to-Win95 transfer. Do a search for mega_fli.zip.... no cables necessary ;-)

5095. Abbrev.ACC

Newsgroup: comp.sys.atari.st
Date: 1998-08-25 00:00:00 UTC
From: tcjspencer@zetnet.co.uk
Message-ID: <6rvfbumhr2@irk.zetnet.co.uk>
Source record: 94708

I have been using this .ACC for many years but unfortunately since adding Veloce+2 with TOS 2.06 it refuses to work. Once desktop appears 68020 - 4 bombs and locks up, re-set to 68000 - just locks up. I have tried every permutation of flag settings and it makes no difference. It would seem that it just doesn't like TOS 2.06. as it has always worked fine on TOS 1.62

For those of you who haven't heard of it, it's a very handy .prg where you set up an abbreviation, e.g. csas, and when you type this you get the full works - comp.sys.atari.st, obvious really. :-)

Does anybody know of a similar program/ACC and if so where I can get it? I do a lot of work with a database compiling records and it's invaluable for consistency of input.

Thanks for any help!

Trevor

5096. Having a question regarding mine 520ST...

==========
ataricomputing/announce #36, from jconnor, 1568 chars, Aug 24 18:46 98

TITLE: *** ACC '98 non/semi commercial stand reservation details ***

Following discussions with Sharward Promotions we're delighted to announce the discount rate applicable to 6 foot (approx 2 metre) frontage User Group stands has now been extended to PD/Shareware programmers at our discretion.

A 6 foot stand costs just £10.75 plus £5 for power.

Table covers and places to mount promotional literature is NOT included so we urge everyone to start thinking about how to make your stand attractive NOW!
A tablecloth with promotional literature mounted on top and to front is the usual solution and dayglo card is the traditional eye-catching device.

Larger stands are available as a percentage share of a full size commercial stand. Details on request.

In addition to our own Atari Computing stand we will also have several workstation sized stands dotted around the Atari area covering the main areas of interest, including Music/MIDI, DTP and Comms.

We're looking for enthusiasts to help us man these stands on the day in exchange for which you get in for free, avoid the queue, and get invited to the after show bash we're hoping to organise.

To reserve a stand please email me at: jconnor@cix.compulink.co.uk

Please include details of anyone working on the stand along with an outline of what you will use the stand for so we can include them in the show guide.

Regards

Joe Connor
On behalf of Atari Computing and Sharward Promotions

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of Linux, a Unix-like operating system
distributed under the terms of the Free Software Foundation's GNU
General Public License, to computers using the Motorola 68020, 68030,
68040 and 68060 CPUs. Current releases support Amiga, Atari and
various m68k-based VME systems from BVM and Motorola; porting efforts
are underway to the Apple Macintosh and various 680x0-based
workstations (at present, the HP 9000/300 series, HP/Apollo Domain
series, NeXT and Sun 3 series). Efforts to port Linux/m68k to other
680x0-based systems are also encouraged.

The current, complete FAQ is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (The Netherlands)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html (Germany)

It is also available at mirrors of the Linux/m68k Home Pages; see
http://www.linux-m68k.org/mirrors.html for a current list.

See Section 1 of the FAQ for links to translations of the FAQ to
various printable formats (including PostScript, PDF and DVI).

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en franï¿½ais. On peut le retrouver
ï¿½ http://web.cnam.fr/Comp/Atari/Linux68k/Faq/

More information about Linux is available on the Internet at
http://www.linux.org/; the Linux/m68k Home Pages are located at
http://www.linux-m68k.org/ (and several mirrors: see
http://www.linux-m68k.org/mirrors.html).

The Atari Music Software site is part of the world's biggest
music software site - Shareware Music Machine - it's at
http://www.hitsquad.com/smm/atari/

You will find heaps of programs to download for
MIDI, Librarians and Editors, Sequencing, Audio, Recording,
Format Conversion, Listening to Music, MODs, Learning About
Music - Improving your Skills, Notation, Making Music -
Algorithmic Composition, MPEG, Guitar and heaps more.

It's all at http://www.hitsquad.com/smm/atari/

This message is spam resistant, to write back via email remove
'nospam-' from smm@nospam-hitsquad.com

Taking this one stage further you could remove both the shielding and the keyboard, which you could either replace with an AT-Keys interface or similar and a PC keyboard, or encase the Atari keyboard in an old PC keyboard case. That gives you plenty of room for upgrades and just needs some kind of cover.

This may be more work than you might want to carry out of course.

Thanks!

... it just hit me how stupid of me to try ST_GUIDE= and ST-GUIDE= but not STGUIDE= :)

Guess I've got so much problems the obvious ones doesn't look obvious. Right now XCONTROL won't load, I can't print, I'm not sure if OLGA works, AND every single doc I've got is in german ... guess I'll sell my copy of Magic and go MiNT if I can't get anything solved.
But I got SPIN to work in a jiffy! I can read every single CD-ROM format on the planet it seems ... but what I also wanted, Audio CD support, doesn't work at all ... guess I'll have to do a posting on that soon too.

Best Regards, K.Hampf

This sounds like a software problem with your Mega2.
2 years ago i use the same modem with a falcon, anytime without trouble.
Make sure your modem cable allready have connected RTS/CTS.
Use HSMOdem7 as serial driver on your atari.
Switch on RTS/CTS !

I think this is not a problem of STinG/CAB, maybee driver or cable..

aFTP is good to use with sting.
I doasn't use telnet. irc looks better .)

If they are self extracting they contain a normal ARJ or ZIP archive, so
STZip or UnArj can find data in them, even if they are .EXE files ... but
the easiest way is to put them on a floppy and run them on a PC.

A member of our Atari club owns a legitimate (or so he says) copy of AtariWorks version 1.0, which was supplied with his computer. However the dictionary and thesaurus file has unfortunately become damaged.

Is anyone willing to provide him with this file, from version 1.0 of AtariWorks (not a newer version, as that doesn't seem to work)?

Marstech (marstech@sprynet.com) wrote:
: Power supply

Try Best Electronics, email bestelec@concentric.net.

: Ext. Floppy

Any normal floppy drive will work, if you just wire it up correctly for the external floppy connector, although you may have to attach a jumper onto the drive to make it recognise media change properly.

: mouse

Why not purchase my Atari Serial Mouse Interface, which is a small unit that allows any serial mouse (the sort used on IBM compatibles) to connect the Atari. You just plug any serial mouse, trackball, or touch tablet into the adaptor, and plug the adaptor into your Atari mouse port. Works anywhere that a normal Atari mouse works, and unlike other "solutions", doesn't tie up your serial port or require special driver software. What's more, if the mouse has a middle button or wheel, it can be configured so a single tap on it acts as a double click of the left mouse button.

This is the best replacement for the Atari mouse, since serial mice are very common, available from any computer dealer, they're cheap, and there's a wide range available.

The Interface is available direct from me for $25 (US dollars) each, or $30 including brand-new 3-button serial mouse. Send me an email if interested. The units will be available locally in the UK soon.

: Hard drives

You can buy the Link '97 which is a SCSI adaptor enabling any SCSI hard drive to be connected to the ST. It costs about $100, from memory. Alternatively, I will soon be selling an IDE-interface for the ST and STE, which will be much lower cost than the Link and allows any IDE hard drive (or CD-ROM) to be connected to the ST. However my IDE-interface is not available for sale yet. I will post an announcement here about the IDE-interface when it is available.

: System Documentation.

The Atari ST manual is not very useful, but chances are Best Electronics have one (but don't quote me).

You may be better off with a third-party book about the machine, many of which should be available from an Atari dealer such as B&C Computervisions (http://www.myatari.com/).

5115. Announcing Atari Serial Mouse Interface

Newsgroup: comp.sys.atari.st
Date: 1998-08-25 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <60Z1CYE@tos.pl.net>
Source record: 94769
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

```
----------------------------------------
ANNOUNCING THE ATARI SERIAL MOUSE INTERFACE
----------------------------------------

* Allows any serial mouse (as used on IBM compatibles) to be connected to
Atari ST(E), TT, Falcon or compatible computers.

* Support for serial mouse, track-ball, touch-pad or any other Microsoft or
Mouse Systems compatible serial pointing device.

* Easy installation: just plug in and go.

* Unlike other "solutions", the interface doesn't tie up your serial port,
or require special software drivers.

* Third button or wheel can act as a double click of the left button, or
on software/hardware that supports it, as a real middle button.

The Atari Serial Mouse Interface is the best solution for replacing a worn-
out Atari mouse, or ensuring that you will never have trouble obtaining a
mouse in the future. Serial mice are used on IBM compatible computers, and
are readily available from any computer dealer.

The interface is also handy for those who are tired of the slow and clumsy
Atari mouse. With the wide range of serial mice, trackballs and touch-pads
available, you will have no trouble finding a pointing device to suit your
taste and budget.

Plus, if like many users you find double clicking tedious, simply obtain a
serial mouse with middle button or wheel. Then a simple press on the middle
button or wheel acts like a double click - no more double clicking hassles.
Or if you use UNIX or other software that uses a middle button for other
purposes, the interface can be configured for that, too.

Installation is simple. The interface is a small unit measuring only
4x5x1 cm, with a serial mouse plug at one end, and a cable that plugs into
your Atari mouse port at the other end. To install the unit, simply plug it
in - no other setup is required. And being so small, it sits comfortably on
your desk without taking up too much space.

ORDERING:

Units are available directly from me:
* $25 US dollars or 15 UK pounds each
* $30 US dollars or 20 UK pounds each including 3-button serial mouse.
```

User groups or clubs, contact me for information on quantity discounts. Dealership enquiries welcome.

Postage to most locations in the world for a few units will be $5 US dollars or 4 UK pounds, and delivery will take a week or two. Contact me for an exact figure.

The interface will be available locally in the UK very soon.

Enquiries: Email: mb@tos.pl.net

Post:
Mario Becroft
PO Box 332
Kumeu
Auckland 1250
NEW ZEALAND

If ordering from outside New Zealand, you can pay by BANK CHEQUE (NOT PERSONAL CHEQUE). Alternatively, you can send US or UK currency by post, but it is YOUR RISK if it gets lost in the post.

P.S. Please distribute this announcement to any relevant Atari forums as you see fit!

And watch this space for some more Atari hardware announcements soon!

From: publish@cix.co.uk
Message-ID: <6rubqq$6qp$1@plutonium.compulink.co.uk>
Source record: 94772

*** ACC '98 non/semi commercial stand reservation details ***

The UK Atari Event of '98 is being held on 14th November at Bingley Halls in Stafford, UK.

Following discussions with Sharward Promotions we're delighted to announce the discount rate applicable to 6 foot (approx 2 metre) frontage User Group stands has now been extended to PD/Shareware programmers at our discretion.

A 6 foot stand costs just £10.75 plus £5 for power.

Table covers and places to mount promotional literature is NOT included so we urge everyone to start thinking about how to make your stand attractive NOW!
A tablecloth with promotional literature mounted on top and to front is the usual solution and dayglo card is the traditional eye-catching device.

Larger stands are available as a percentage share of a full size commercial stand. Details on request.

In addition to our own Atari Computing stand we will also have several workstation sized stands dotted around the Atari area covering the main areas of interest, including Music/MIDI, DTP and Comms.

We're looking for enthusiasts to help us man these stands on the day in exchange for which you get in for free, avoid the queue, and get invited to the after show bash we're hoping to organise.

To reserve a stand please email me at: jconnor@cix.compulink.co.uk

Please include details of anyone working on the stand along with an outline of what you will use the stand for so we can include them in the show guide.

Regards

Joe Connor
On behalf of Atari Computing and Sharward Promotions

Kind regards

Mike Kerslake

I'm not sure about "War In Middle Earth" but I know "Chaos
Strikes Back" was never ported to the PC.

I have the following for sale:

1 1040STF with 16Mhz Adspeed and 4Meg of ram.
Two External floppy drives.
256 Meg HD.
14.4 Modem
Color and Mono Monitors
Hewlett Packard B/W Bubble jet Printer
TONS of software and magazines.
Spare mouse
Two Trackball mice.
Monitor Switcher.
I live in the Cleveland OH area. The total weight of all of this stuff in boxes is 285 LBS. Therefore you must pick up or I will deliver it to you within a 300 mile radius. The cost of shipping this much stuff is rather prohibitive. Evertyhing is in working order and is running if you would like to view it prior to purchase. I am asking $400 for the lot firm and I will not break up the parts.
Needless to say this is a complete system and has been very well taken care of. If you are interested please E-mail me.

> of 50Hz as in Europe)?

I was able to stick the 2 wires on the RGB13 connector and got
composite out. It's not bad really.
Yes, we use PAL-M, which is a f*cked up PAL system running at
60hz. It's not directly compatible with european PAL (no colours and, due
to the 50hz, no sync). But NTSC is quickly becoming the standard here,
since most TVs now are dual system (PAL-M/NTSC), including the little
Samsung 14" I'm using for the STe.
But my main problem now is that, whenever the STe switches to PAL
mode (50hz), I get a flickering, black and white screen.
On the Amiga, it's possible to switch it to PAL mode, but it
would still display colour, unlike the STe. I was really disappointed with
this, since I planned to use the ST to play some old games, but I'm not
really into playing games in B&W :(
Is there a solution for this? If I hook a colour monitor to the
RGB output, will I get colour, even in PAL mode? Using composite, things
went B&W when in PAL too :(Also, if I use this device you mention, will
it work for me?

I've had something odd haappen today. 1st time it did it I
didn't realy think much about it, but it's happen 2 more times.

What?

I will use Newsie and then I'll use cab 2.7 (w/3010b) and at
sometime, (once right at the home screen) CAB will totaly crash.

I'll hit reset and cab will work just find then.

now figure that one out!

The minix filesystem is similar (AFAIK) to the Unix system.
It is included in KGMD & is installed if you do a complete install.

It is not necessary to use the Minix filesystem to run MiNT, but it offers
many advantages over the TOS filesystem (longer names, faster access).

The full KGMD install needs the Minix filesystem installed to work properly.

> low sync of RGB? And the 3D you mentioned is a NEC model too?

The quote about the 2A is William Platt's, not mine (note the extra ">"
marks). I have an AT&T 329-M connected to my Falcon030 at present. That
monitor is a rebadged NEC 2 (no "A"). From what I understand, the 2A does
not scan down to 15.75Khz. If so, I expect it was either a reduced cost
version, or offered higher horizontal scan rates than the Multisync 2
(which only goes up to about 38Khz). 15.75Khz capability is not as big an
issue with the Falcon as it is with the Amiga. It is, however, nice to
have for those games that hit the hardware directly and insist on running
in true lo-res or med-res ST video modes.

Yes, the 3D is an NEC model, and perhaps the best 15.75Khz-capable
multisync you can get. One source is http://www.deepspacetech.com, which
has a few for $50 each + shipping. (Now that I have let the cat out of
the bag, I'll have to go snap one up before they sell out).

> years for the drive, 3 for the carts?

Nope, the cart warranty is longer than the drives. The carts were 5
years, as I recall. I checked the manual for the IDE EZ-135 in my PC, but
they do not seem to mention the warranty for the drive, but I believe it
was 1 year.

I checked with SyQuest about the possibility of the drive still being
under warranty, although I did not know the purchase date. They requested
the serial number, and after checking that, replied that it was not.

While SyQuest offered to exchange it out of warranty for a price, the
price they wanted was about the same as I had being seeing used EZ-Flyers
go for (when they popped up). Needless to say, I declined their offer.

> BTW, how hard is it to remove the mechanism from the case - I
> wouldn't mind installing it inside my homemade SCSI case.

Not difficult at all (for the EZ-135). Just pull off the little rubber feet, and that will give you access to the screws. As I recall, there are also some plastic latches that hold the case together, so look for those along the seam and push them inward with a flat screwdriver while pulling that side apart to release.

The EZ-Flyer is likely another matter. I believe that with the external version, it may be an integral part of the mechanism, like the external Zip drives.

Dan Ackerman wrote:

[...]
> Anyone tried one of the 1.300x beta's on authentication?

No, but I'm currently fighting hard to get CAB 1.5 to run with
CAB.OVL 1.2904, 18.4.1998.

Or is the combination CAB1.5 with CAB.OVL 1.2904 a "nono" on
a ATARI Mega 2?

And:
Why is it that the file name says "1.5" and in the
package I find "1.4, 19.9.1996" occasionally?

ME

P.S.: my hardware: Mega2, ZyXEL 1496E plus,
I installed STiNG 1.12, HSMODEM and I could already use
telnet and ftp (so at least I know, that the netconnection works)

P.P.S.: just realized the date of the posting - I hope it
doesn't matter

I have this problem now.
CAB 1.5 (or is it 1.4...) just shows:
"Status: Connecting to host..."
and never returns.

And: ESC doesn't work.

I have to reboot!

My config: STiNG 1.12, CAB 1.5(according to filename), CAB.OVL 1.29.
HSMODEM 0.7;
ATARI Mega 2.

(the connection to the provider is there - I can use telnet...)

It works quite well, but MiNT without long filenames it's like chicken chips
without chips ;)

>Is the Unix filesystem the same as the Minix filesystem, and are they
>included or required in the KGMD archive?
Yes, and the name of the driver is "MINIX.XFS". There is the Minix.xfs v0.60
PL11 in the KGMD. It's a modified version of the driver but it works quite
well.

I've installed KEMD on my Falcon. If I can help you further don't hesitate
to mail me ! (if you don't care about my poor English of course ;p)

alternate key should work.
upgrade your hd driver! :-)
with ICD or HD Driver, when you see the hard driver icon.info screen,
holding down the appropriate letter key will boot from that hard drive
partition. i.e. holding down the 'e' key will boot from E partition

Right, Steve, I should have thought of that already. But I just did it
and the exact same problem recurs.

I also tried it on single TOS: no use :-((((

Double-groan,
Charles.

I'd be happy to pay for an update (from my commercial 2.5 to 2.7) - if it was
available in English... :^(

>As far as the clock. Don't know what's going on there. I just
>call a simple routine in CAB for that.

Actually, it was the _entire_ info line in CAB. The font was so huge that all
you could see was the "clock". The rest of the line was (presumably?) off the
right side of the screen. And the lower 2/3 of the window just got worse and
worse before finally freezing up altogether. Hard to explain but impossible
to miss!

Have _you_ tried to duplicate the error?

If you're talking about the TB-303 / TR-808 emulator from Steinberg, I don't think ReBirth exists for the Atari (I wish it did!).

There is some software from a company called Electronic Cow that is similar to ReBirth though, but it's really only a TR-909 emulator.

Check out their web site. They've got some other new Atari music-related software too...

I now have a 27 inch Zenith that flickers alot. The NEC Mul;tisync 2A
Handles the low ST resolutions. I do have problems with higher than
640x480. I have the docs to build a switchbox to connect it to the
ST and use the color modes. Most games also work very nicely on the
2A. I Have a 2V at work which is the same but with digital controls.

Source record: 94714

Is TOS 4.9 illegal. What about disk based versions of 4.04. Is it
illegal if I use 4.04 on my STe, or 1.62 on my Falcon. I don't
approve of piracy, but when you are curseds with a buggy version of
TOS, there should be no problem with using an updated version. Lets
ask Atari, or JTS, or Hasbro to fix their buggy versions of TOS. I
have TOS 4.01 on my Falcon, and the 4.04 version is a lot more stable.
If a new version of TOS became available with newer features then I
would buy it, but why should anyone have to buy a patch to the OS
which is part of the machine. The 1.62 on my STe is very stable and I
have no need for any other version, but the Falcon is a different
story

Just my opinion anyway.

I believe the tr909 emulator will only work on an ST e or a TT. You
would be better off buying a seperate drum machine. Used ones are
not that expensive. I was able to get a Yamaha RX 11 for under 100.00
Also...the Atari version of cubase will not work with samples..only midi,
unless you have a Falcon, then you can get Cubase Audio. Cubase on an
Atari is still the way to go, even over PC/ Mac machines because of
the built in midi ports...the timing is right there!

5159. Calamus SL printer driver generator

Newsgroup: comp.sys.atari.st
Date: 1998-08-26 00:00:00 UTC
From: derryck@TAKETHISOUTcix.co.uk
Message-ID: <6s0b90$oe9$1@plutonium.compulink.co.uk>
Source record: 94721

I've been trying to set my new printer (a Kyocera FS-600) up with CalamusSL '98 to give me 150, 300 and 600dpi using the closest matching descriptor file (the HP Laserjet 4) and the driver generator program.

The best result I've been able to come up with gives a peculiar "banded" effect in all but the 600dpi mode, where a backgound shaded object has bands of light and shade according to the presence of text at the same level IYSWIM.

The LJIV driver as supplied with the package offers 200 and 600dpi only, and the printout's fine, but I'd really prefer the others I listed.

At the moment I'm using the LJ111 driver for 150 and 300dpi and the LJIV for 200 and 600dpi, obviously I'd like to merge all into the same driver.

Does anyone have experience of using the driver generator program (or better still!) have a working driver that they could offer please?

5160. 4Mb STFM and SLM605 laser printer F/S (UK)

Newsgroup: comp.sys.atari.st
Date: 1998-08-26 00:00:00 UTC
From: derryck@TAKETHISOUTcix.co.uk
Message-ID: <6s0b91$oe9$2@plutonium.compulink.co.uk>
Source record: 94722

I need to clear some floorspace so I'm selling the above:

* 520STFM upgraded to 4Mb with Marpet SIMM board
* Vortex ATOnce-Plus 16MHz PC hardware emulator (currently fitted in the above but will split)
* SLM605 laser printer, under 5,500 copies. Uses commonly available Mannesman Tally MT906 consumables. Small cosmetic crack in plastic paper tray cover. Spare controller board.

All equipment has original boxes, manuals and disks. Laser printer has the Epson FX emulator software plus other utilities.

Offers in email, you'd probably want to collect from Watford, Herts or carriage extra at cost.

You can connect SCSI devices to ST's, but you will need a SCSI host
adaptor such as the ICD Link.

Regards,

Ben Hills.

This is all answered in the Quick FAQ. You need a SCSI host adapter such
The Link I or II, the ICD Link, the Top Link or the Link 97. Atari's
good old AHDI will work fine and is free. There is better HD driver
software around such as Uwe Seimet's HD Driver, but commercial.

Cheers,
Nick

Scott,

>> Looking to purchase complete TT setup.

If you can wait a month or so, I will should have my main TT030 system available for sale as I'm in the process of switching over to a new platform. The system includes a TOS3.06 TT030 system with 26mb of RAM, an internal 1gb Fast SCSI-2 hard drive, 14" SVGA color monitor, 19" TTM195 high-res monochrome monitor, and monitor switch box, as well as all original owners manuals and diskettes, and an Atari SLM605 laser printer.

Let me know if you're interested in such a system. Also, let me know where you're located -- hopefully in the U.S.

I also have another TT030 system currently for sale (with 8mb of RAM and an internal 1gb hard drive), but already have a tentative purchaser for that one. If that sale falls through, it may be available within the next few days. Let me know if you might be interested in this system also.

Sheldon

I suggest :
hardware : SCSI Host Adaptor Link 97 from WB
Software : lastest verion of HDDriver (version 7.5, am I right?)

If you are stuck for cash, you could investigate RS232<>RS422 converters.
link @ 19200 baud (max on STE). You can also make your own if the commercial bo
link @ 19200 baud (max on STE). You can also make your own if the commercial
boxes are too costly.

You might even get RS232 @19200 baud to work. I have seen 150 feet cables work
@ 9600 baud.

Of course 19200 baud is slow, you could also modify the STE + install HSMODEM
drivers to get up to 57600 baud. Don' think RS232 will work aover a 30m link
at that rate.

How about wireless links, there are cheap modules (around $20) that can
transmit up to 9600 baud.

5168. big problems: LEXMARK 1000 JETPRINTER on FALCON?????

Newsgroup: comp.sys.atari.st
Date: 1998-08-26 00:00:00 UTC
From: jur96mct@studserv.uni-leipzig.de
Message-ID: <Pine.A41.3.96.980826144834.28284C-100000@studserv.uni-leipzig.de>
Source record: 94730

Hey dudes,
I have a really big problem according the printer I've won at a Polish computer party some weeks ago.

It is a LEXMARK 1000 JETPRINTER and it does not work as I want it on my Falcon and ST both.

Falcon: TOS 4.00, 4MB RAM, SKUNK-speeder (hardware-switchable)
ST: RainBow-TOS, 3MB RAM

I even have NVDI 4.11 R, tried it with Papyrus and QED. It did not work.

The printer-cartrigde only moved a bit to the left and back, but never as much as to go over the paper's area.

Strangle enough, the printer does it job on PC.

My old printer, a EPSON LX 400, did work on my ST. So I am a bit astonished about the LEXMARK one not working on it. Btw, the EPSON 9pin printer did not even work on Falcon.

I hope the Falcon's port is not damaged?!?

....
If you can help me, please mail me _but please don't answer this one in the newgroup_ cause I never come around here else!!!!
....

write to:

jur96mct(at)studserv.uni-leipzig.de

...and if you want to check out some of my handdrawn pictures, take a look at...

> then certainly practically!) ...

Actually I'd put it the other way around: technically way out-of-spec,
but in practice I've done worse things and got away with it ...

What you really need is a pair of "line drivers": a line driver is a
bit like a modem but without all that stuff for dialling and ringing.
We used to use them a lot back in my lab-tech days, but they've become
rare now that "everybody" uses ethernet. Some modems (e.g. my Zyxel)
have a "leased line" mode which can be used for this: an expensive
solution if you had to buy the modems, but not if you could already
find them gathering dust somewhere.

Or you could use MiNTnet or STiK to turn the STe into an FTP or HTTP
server, and have the PC dial up to it using DUN ...

The question is what do you plan to do with it ? There's not much point
in connection a synth just for the sake of it.

An ST can be useful for 2 things when connected to a synth.
- Recording and arranging music (sequencer)
- Editing and storing sound patches (editor/librarian)

The software will dictate whether or not 512K of RAM is enough. If you
are planning on getting Cubase or Notator, which are pro/semi-pro
sequencers, then you will need at least 1Mb and a monochrome monitor.
Otherwise, there are some freeware/shareware sequencers (try Sweet16)
around that will run with less.

The choice of an editor or librarian depends on your MIDI equipment, but
there are many shareware ones around for the ST era synths

Cheers,
Nick

.....
Edward,
I've had the same problems(I'm sure many others as well). The
best thing is to take the .EXE prog to a PC and run it there in
an Atari folder. No, I didn't have access to a PC for a long
while, so I didn't do that either, and some files are just too
big. The work involved in cross translating the program is just
to high. It can be pure assembly, pseudo code with lib files
only on the PC, and even compressed. The only time I have had any
success in accessing a PC .EXE is by using STZIP to unzip it.
The ST program bypassed the built in unzipper that the .EXE
contained.
Hope this helps a little.
Rick D.
P.S. I did try with PCDitto type emulators, with way to much
frustration. I haven't tried since.

>Does anybody know of a similar program/ACC and if so where I can get
>it? I do a lot of work with a database compiling records and it's
>invaluable for consistency of input.

Well I don't know if I could get it working, though it may be a clash
with another program that you've recently installed - try disabling
other accessories and rebooting to see if it might work.

It seems to me that you need a program or accessory that gives "Macro"
cababilities. This could be prgrammed with lots of keypresses to
produce lots of different responces, which could range from typing
"comp sys atari st" for example, to automating mouse movements and
clicks.

Cheers!

James

New at Systems For Tomorrow August 26th, 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~~

GEMTrade 2 for TOS Computers $19.99
GEMTrade will take a German document and produce an English alternative. It also includes a lookup dictionary to find the translation of a specific word. GEMTrade can even function as a module for the CAB web browser. German web pages can be instantly translated while on-line!

Apex Media for Falcon030 $139.99
Apex Media has long been considered the king of Falcon art and animation packages. Now, we have finaly been able to receive stock again. Apex Media includes a full suite of drawing and animation tools, morphing, true color filters and more. From Titan Designs.

Apex Intro for Falcon030 $49.99
This little brother to Apex Media is perfect for the average user that would quite possibly never use all the features of the Media version. It still provides ample drawing and animation tools, but gone are morphing, true color filters and non linear drawing tools. Also missing is $90 from the price! From Titan Designs.

Crown of Creation 3D for Falcon030 $39.99
In the year 2060 the earth is in deadly peril. Two alien races threaten humanity. The only hope left is the newly developed LH14 space-fighter and you. COC-3D is a breathtaking true color space combat simulation that features outstanding Graphics, sound, gameplay and contols. Even has in film sequences. This is the best falcon game we have seen in a long time, quite possible the best ever! From RebelSoft.

Atari Computing Magazine #10 $9.99
Latest edition of Atari Computing Magazine. Includes: Reviews of MagiCMac 2, PixArt 4, SpeedoGDOS 5.7, ScanX, MIDIman, Suzy Bs v2 and Veloce+. Tutorials on Papyrus, STe sound programming, Hisoft Basic and the Team Tap. Plus all the usual Features and more. Includes Reader Disk. Subscriptions available. From Renegade Publishing.

ExtenDOS Gold for TOS Computers $39.99
The latest version of the best CD-ROM drivers! Now supports long file names, CD-R and CD-RW drives. Also now will save a CD-Audio track directly to your Hard Drive with most drives. We offer upgrades from ExtenDOS Pro for $25 with the return of you
~~~~~~~~~~~~~~~~~~~~~~~~~~~

ExtenDOS Pro disc. From Anodyne Software.

CD-Write for TOS Computers $39.99
When combined with ExtenDOS Gold, and a supported CD Writer, this package will alow you to create your owen CDs! For Cubase Audio users this is a Must have! From Anodyne Software.

Falcon RAM card for Falcon030 $69.99
This Falcon RAM card from Germany allows you to expand your Falcons memory to 14MBs using an easy to find, and cheap, 16MB 72pin SIMMs. From WB Systems, makers of the Link 97.

Pinball Dreams for Falcon030 $9.99
This Pinball game for the Falcon isn't new, but the price is! Pinball Dreams features four tables of pinball action. It comes with both an RGB and VGA versions so it will work on almost all falcons with a color monitor. From 16/32 Systems.

Desktop Solitaire 1.02 for TOS Computers $19.99
Eight Solitaire card games in a GEM friendly application. New version now supports most video cards in 2,4,16,256 and 24bit color modes. Also includes several bug fixes, and the abitily to redeal the current deck. Upgrade DTS 1.0 to 1.02 for free, or check out the new demo, on the Systems For Tomorrow web site (look under Kordes Development from the main page.)

HD Driver 7.55 for TOS Computers $49.99
Latest version of the popular Hard Disk software. Includes various upgrades and enhancements, including support for LS-120 drives. Upgrade HDD 6.x to HDD 7.55 for $24.99 with the return of your HDD 6 Manual and Disk. Update HDD 7.x to 7.55 for $5 with the return of you HDD 7 Disk.

Image Copy 4.1 for TOS Computers $49.99
The must have image conversion/viewing/printing program. Supports a wide varity of image formats, and provides high quality printing support for color inkjets. From FaST Club. Image Copy 4.0 to 4.1 upgrades are also available for $9.99.

Xchange for TOS Computers $19.99
Vector graphic conversion program. Supports the following conversions: Will convert EPS, AI, WMF or WPG to either CVG or OL. It will also convert CVG to EPS or OL to AI. From FaST Club.

Fonty for TOS Computers $24.99
This is a fully featured editing program for creating and editing Calamus CFN-format font files. Fonty features include: draw mode icons (Hammer mode, Pliers mode, Move mode, Select path mode, left and right kern mode), Grids and Guide Lines, Manual and Automatic kerning, Backgrounds for tracing (a Degas picture or a complete GEM font), a full feature Calculator to mathamatically manipulate fonts, and Window scaling. A separate program, PFB2CFN, reads a Postscript Type 1 Font file and copies it into a Calamus CFN font

file. From FaST Club.

Scribble Synth for TOS Computers $29.99
This program is a software-based sound synthesizer. Scribble Synth is a true additive synthesizer, but with a difference, You actually draw in frequency envelopes with the mouse! The results are quite amazing. Strange Sci-fi Warbles, time-based pitch and filtering effects, plus frequency modulated sounds are all possible. From Electronic Cow.

EC-909 for STe/TT/Falcon Computers $39.99
EC-909 is an analogue drum machine emulator for the STe/TT/Falcon. It features sixteen origional TR-909 sounds with various controls. EC-909 can create single bar patterns in real-time, and then export them into your direct-to-disk recorder or sample editor as AIFF or AVR format samples. From Electronic Cow.

MidiPlay $49.99
This is a player of MIDIFILE without additional hardware for the Falcon030!! It plays the MIDIFILE with digital sounds! Features: Play all the MIDIFILE following the GM norm * Up to 24 voices on an normal Falcon * Each channel have a dynamic polyphonic voice. * You can change the sound of current channel. * Function SOLO (play only the channel), MUTE (not play the channel). * Viewing of volume, information for each channel, bar, time, etc...

Live Machine $64.99
Live Machine is a D2D program for accompanying someone during a concert. Live Machine can be controlled by MIDI messages! For the Falcon030.

Also Available:
MIDI Arpeddiator $27.99 MIDI sequencer
Sound Chip Synth $19.99 Software synthesizer
Snippit Synth $29.99 Granular synthesizer
Atari Works $79.99 Easy to use home/office suite.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

>sure you renamed ST-GUIDE.ACC to ST-GUIDE.PRG too (plus all refs to
>it?)...???

Yes. It's in my ST-GUIDE directory (ST-GUIDE.PRG)

And here's (part of) my ST-GUIDE.INF file:

```
#=============================================================================
# Default search path, where ST-Guide looks for 'HYP' hypertexts:
PATHS=C:\GUIDES
#
# HCP is used to compile STG files into HYP files. STool uses this entry
# to find HCP and compile:
HCP=C:\ST-GUIDES\HCP.TTP
#
# Hypfind is called by ST-Guide to search for search masks in all pages
# in the current hypertext.
HYPFIND=C:\ST-GUIDE\HYPFIND.TTP
#
#HYPFOLD
# The file used to find references:
REF=C:\GUIDES\STGUIDE.REF
#
```

And, all of my .HYP and .REF files are in the C:\GUIDES directory too.
And just for the heck of it, there is a copy of ST-GUIDE.INF in the ST-GUIDE
folder and in the root directory of drive C:\

Still, it doesn't work unless ST-GUIDE is installed as an ACC. :^(

From: Prince Corum <corum@sasquatch.com>
Message-ID: <6s5ei1gvr1@news.sasquatch.com>
Source record: 94595

Hi everyone... sorry to pester again, but I have a few things that are bugging me a bit.

1) Does anyone out there have a copy of Typhoon Thompson for the ST they'd like to sell?

2) How can I tell what version of TOS I have in ROM and what difference will it make?

3) Is there still Mac emulation available for the 520ST?

4) Are there RAM and STereo upgrades still available for the now ancient (but STill nifty) 520?

If anyone can help me with this info. it would be greatly appreciated.

Thanks!
Louis

5184. HDDriver and Hades

Newsgroup: comp.sys.atari.st
Date: 1998-08-27 00:00:00 UTC
From: wordwork*@ctos.com
Message-ID: <35e5522d.0@news.weldlink.com>
Source record: 94596

I recently upgraded to version 7.54 and have found a couple of problems with my Hades 060. The following is done while running Atari TOS.

1. I have a ZIP cart that I formatted with version 6.22. 7.54 will not read this on the Hades. Works fine with 6.22. 7.54 will read it on my TT.

2. I have the Konica mechanism from an old Supra FS-10 10 meg floppy unit installed. 7.54, when I set both LUN 0 & 1 in the config, will read the disk, but the directory is scrambled. Without LUN 1 set, it won't even recognize the drive during bootup. Worked fine under 6.22.

I was disappointed that I could not read IBM formatted ZIPs unless I had Magic and/or BigDOS. No English Magic for the Hades, and I've never been able to get BigDOS to run on my Hades. :-(

Hi there,

>But the trouble is, so many TYPES of drives! sCsI-3, SCSI WIDE,
>SCSI ULTRA WIDE, just the ones I can remember, now the question,
>which of these can work on a Falcon? I figure another month or
>two, got to replace this TT keyboard 1st, so far at lest 3 keys I
>have to almost use a hammer to get to work.

You can use most SCSI, SCSI-II and Ultra SCSI drives. If you want to use a Wide-disk, you need an adaptor from the 68-pin connector on the drive to the standard 50-pin connector of the flat cable and many of those will probably work fine. SCSI-3 and Ultra Wide may be more uncertain, but with an adapter, I believe many drives will be ok. If you want to use them with Cubase Audio on the Falcon, it's a bit more complicated since there are many drives that won't work properly with CAF - check out my homepage for a list of some of the working/non working drives...

Best regards,
Claes

: low sync of RGB? And the 3D you mentioned is a NEC model too?

: Regards, K.Hampf
: e-mail: k_hampf@yahoo.com

No, the 2a is a later model than the NEC II, the 2a runs 31.5 (vga) & up, the
multisync 2, is the earlier version that does go down to 15.75 and will do
analog RGB at that rate. The II is the one you want, not the 2a... Dan Valega

Cross-posted to: rec.music.makers.synth,comp.sys.atari.st

A friend out here in Eastern Canada had his apartment broken into. Thanks to backups his MIDI files are safe, and thanks to the market situation there's always another Atari 1040. But the thieves got the dongle and the manual in the heist. Too bad.

He has asked me to search for one to restore his system. I can copy my v.3.21. but without his own dongle, there will be no Notator SL.

Open to offers. e-mail me at:

ag352@chebucto.ns.ca

5191. PH Player 4.6 beta 1 released

Newsgroup: comp.sys.atari.st
Date: 1998-08-27 00:00:00 UTC
From: wongck@letterbox.com
Message-ID: <6s2inb$c76@usenet.pa.dec.com>
Source record: 94659

Hi Atarians,

PH Player 4.6 beta 1 is ready for downloading from
http://probehouse.home.ml.org

New in this release:
* Plays direct from disk
* Convert MIDI files about 10% faster than previous release
* Quieter MIDI output - more audible notes
* Playing MIDI does not block GEM
* Some bug fixes

More coming soon:
* command line for number of repeats
* error output to a window rather than screen
* variable playback speed for raw sample
* MIDI instruments on/off control
* and a new sample format

Beta Status:
I want to know if the direct from disk playback works on a STE/TT.
So let me know.

Rgds
William

>Can anybody help me with a tool to copy large files (bigger 1 disk) from
>WIN95 to Falcon ??

There's an early beta of a tool to do this on my website called
SdSplit. You'll need to look in the PC and Atari sections to get both
machine versions.
http://www.swampdog.demon.co.uk

I stopped development on it due to lack of interest.

>I'm helpless! But I don't want to miss my Cubase Audio insead of Cubase VST.

There's no documentation with either, other than hints (right click
with BubbleGem for these on the ST version). Also, I'm not sure if the
ST version displays correctly with less than 16 colours. The PC
version needs no special installation and won't mess with the registry
or scribble files into system folders etc - just delete it the same as
you would the ST version.

All you need is a set of floppies formatted so that both machines can
access them.

There must have been a few thousand programs ever written for the ST.
All depends on what you want to run: games, word processing, internet
stuff, etc...

Have a look at the Quick FAQ for some pointers. You'll find a link to
the UTSI software archive and the most popular Atari FTP sites

>STGUIDE= :)

Hmmm...

Well, I have this in my MAGX.INF file:

#_ENV STGUIDE=C:\ST-GUIDE\ST-GUIDE.PRG

And ST Guide is NEVER called from other programs. In order for it to work
properly, I have to install ST Guide as a normal accessory.

I can't understand why it won't work? It points to the exact directory and
file, and all my .HYP and .REF files are in the appropriate place, and
STGUIDE.INF points to the right place too. But if I'm in a program that uses
ST Guide for it's "HELP", and I _don't_ have ST Guide installed as a normal
ACC, IT WON'T WORK. :^(

Same as me, I only left it in the root dir where I used it as ACC.

>And ST Guide is NEVER called from other programs. In order for it to work
>properly, I have to install ST Guide as a normal accessory.

Now it works for me, but not all the time. The HYP and REF's must be put in
your GUIDES dir, and then some programs work ... others don't.

Still it's a problem with Magic. When I installed SPIN for my CD-ROM I can't
use XControl any longer either, not that it has Audio CD support. And I get
"Memory Allocation Error" at bootup. AND Magic 6 is *NOT* stable ... there
are yet bugs to be fixed.

Hello all!
It's that time of year again. Time to sell my old systems
and get a new one. So here goes:
Mega STe with 16 MHz 68000 processor.
Only has 1 year of use. (brand new board essentially)
Professionally Mounted in Full Tower Case.
TOS 2.05, 720K Floppy
ICD Link/2 Special Clear Edition
Strong PC Power supply and custom connector
1 gigabyte Seagate Hawk SCSI Hard Drive.
I'll try to find a SCSI CDrom and install it with SPIN drivers.
Loaded with Software, including MagiC 5.1.
Full internet installation ready to be configured.
About 20 megs of MOD's.
Fast beautiful machine in a tower case.
Asking $350.

I can't sell it just this second, probably more in week week and
a half. I have to get everything properly mounted and take
the 5 1/4" drive out that is functioning... Only as a SCSI
terminator. When you get the machine everything will be
mounted right, that is why I need a week or so.
Contact me for more info on software.
Thanks alot.

5208. Re: TOS 4.92

Newsgroup: comp.sys.atari.st
Date: 1998-08-27 00:00:00 UTC
From: Nicholas Bales <bales@mygale.REMOVETHIS.org>
Message-ID: <35E560D0.5181BAD@mygale.REMOVETHIS.org>
Source record: 94676

Charles Silver a ï¿½crit:
>
> When JTS sold out to Hasbro, I'm not sure they mentioned TOS v4.92 or just
> all TOS, beta's and all.
>

Actually Hasbro bought all Atari's 'intellectual property', that is
patents, names, copyrights and all that kind of stuff. One thing that
was not indicated in the agreement was whether or not Hasbro got all the
drawings, schematics and source code that went with Atari products.
Nobody seems to know what happened to all this stuff.

> If someone out there in cyberspace is a lawyer, let them comment on this.
>
> No matter the legal case, TOS v4.92/AES4.10 is out. If you use it and
> some data is lost or damage done, you can't sue the copyright holder.

These are my 2 cents: All TOS versions can now be found on the net
somewhere. If Hasbro had any problems with this, they would probably
have reacted, but they really don't seem to care. I've sent them emails
about this, and they never replied.

It is might be illegal to distribute TOS freely, but what harm does it
do ? My opinion would be something like: put them up. If Hasbro ever
complains about it, then remove them. They will always send you a formal
complaint before sending the lawyers after you, and they don't seem to
have done that so far against the Little Green Desktop or other such
places.

One thing they do seem to care about is the Atari name: they asked Milan
Gmbh to change their atari.de domain name. But I'm quite sure they don't
give a damn about TOS.

I'm not talking about TOS 2.06, which is a special matter, since many
companies bought the right to distribute and sell the ROMs.

Another thing that bothers me is what is the difference between
distributing TOS and distributing, say, AHDI or XControl. Both of these
are (c)Atari Corp, neither of them has a note from Atari saying "this
program can be freely copied", and yet both of them are free all around
the Net. In my opinion, TOS should be treated in the same way, shouldn't
it ?

Cheers,
Nick

Okay, granted its expensive, but the Software Hut sells a 14" and 17"
model by Electrohome, that works very well with the Falcon. I've got
the 17" model and it rules. It will do SVGA as well as synching down
to 15.75 so that all the older/RGB stuff works. (well, 90% anyways).

I can't imagine going back to anything else now... ;-)

5212. DuST and NoSTalgia problems

Newsgroup: comp.sys.atari.st
Date: 1998-08-27 00:00:00 UTC
From: xav@compsoc.man.ac.uk
Message-ID: <6s3v1keut1@irk.zetnet.co.uk>
Source record: 94680

I recently bought a Mac clone, running MacOS 8.1, and decided to have a play with NoSTalgia as a potential means to run some of my GEM apps. I downloaded the latest versions of NoSTalgia and DuST from the net and installed both.

The problem is that none of the .ST files I create with DuST seem to be accepted by NoSTalgia. In particular I tried the Atari Computing reader disks nos 6, 7 & 8, and the installation disks for Imagecopy.

In all cases these were readable as DOS formatted disks from the Finder. I tried to use DuST with its default settings for tracks & sectors, as well as with all combinations which yielded a disk size even close to that shown by my Falcon's Show Info for these disks. In all cases NoSTalgia complained that they were not valid disk images. Turning on the "read bootsector" option (or whatever it's called) in NoSTalgia allowed it to read the files without error, but trying to open a drive with one of these mounted files resulted in a reset of the emulated ST.

DuST refused to make MSA files of any of the disks either, though I can't remember the error message.

So basically, am I doing anything supremely wrong? I noted a message in the NoSTalgia readme about problems with the PC reader part of MacOS 8.1, but it read as though this only had effect when writing to NoStalgia's hard drive. For that matter, though, is there a way to write to the hard drive file, other than by mounting an .ST file and copying its contents from within the emulated ST?

All I want to do is to get some straightforward Atari software onto the emulator, but ATM there seems to be no practical way of getting information in or out of it, rendering it worse than useless.

All help or suggestions (apart from "Buy MagiCMac") gratefully accepted.

Xav

```
: anyone have any ideas ... want to network pc and an STe ... before you
: say ghostlink, the two machines are, and MUST remain, a good 30metres
: apart ... so i assume too far for a RS232 cable (if not technically
: then certainly practically!) ...
```

How much are you willing to spend? Check out universal line extenders; you should be able to find some at a large computer store, or get them through a catalogue. The catalogue (MISCO) I have in front of me has them at $180 Canadian (before the dollar went through the floor), and it looks like you'll nee two of them. If you're prepared to splash out a little more for a top quality product, check out
http://www.blackbox.com/catalog/10printer/436.PDF
Look at the parallel and serial extenders. You're looking at US$235 for a complete serial-serial extension.

I suppose an another option is to set up an Ethernet using one of the (vapourware) adaptors for the ST.

From what I remember from previous posts this occurs when the URL
which CAB is using gets so long that it overwrites other data. It
happens to me - there is no way out apart from re-booting :-(

If Alexander is reading this perhaps he will confirm that this is the
bug.

Thanks for the advice James. The reason why I think that it is TOS
2.06 is that if I put our 1meg STe TOS 1.62 onto the hard drive
there are no problems. In fact with the new set up I have removed
some .prgs and .accs as they were not needed.

Actually I am not very impressed with TOS 2.06, to me it is not so
good as TOS 1.62 with Kaosdesk frankly.

But there's a big difference here: Atari intended for AHDI and XControl
to be 'distributed'. There's nothing illegal about these two programs
being available on the 'net or BBSes, as Atari Corp. made them freely
available through online services of the past (but still under copyright
of course). Even to this day, one can still download them on GEnie, as
originally uploaded by Atari Corp. personnel. Other 'Atari' software is a
different matter.

5227. Re: Announcing Atari Serial Mouse Interface

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <4631CXF@tos.pl.net>
Source record: 94598
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

```
------------------------------------------------------
28/8/1998 ANNOUNCING THE ATARI SERIAL MOUSE INTERFACE ** REVISED **
------------------------------------------------------

* Allows any serial mouse (as used on IBM compatibles) to be connected to
Atari ST(E), TT, Falcon or compatible computers.

* Support for serial mouse, track-ball, touch-pad or any other Microsoft or
Mouse Systems compatible serial pointing device.

* Easy installation: just plug in and go.

* Unlike other "solutions", the interface doesn't tie up your serial port,
or require special software drivers.

* Third button or wheel can act as a double click of the left button, or
on software/hardware that supports it, as a real middle button.

The Atari Serial Mouse Interface is the best solution for replacing a worn-
out Atari mouse, or ensuring that you will never have trouble obtaining a
mouse in the future. Serial mice are used on IBM compatible computers, and
are readily available from any computer dealer.

The interface is also handy for those who are tired of the slow and clumsy
Atari mouse. With the wide range of serial mice, trackballs and touch-pads
available, you will have no trouble finding a pointing device to suit your
taste and budget.

Plus, if like many users you find double clicking tedious, simply obtain a
serial mouse with middle button or wheel. Then a simple press on the middle
button or wheel acts like a double click - no more double clicking hassles.
Or if you use UNIX or other software that uses a middle button for other
purposes, the interface can be configured for that, too.

Installation is simple. The interface is a small unit measuring only
4x5x1 cm, with a serial mouse plug at one end, and a cable that plugs into
your Atari mouse port at the other end. To install the unit, simply plug it
in - no other setup is required. And being so small, it sits comfortably on
your desk without taking up too much space.

ORDERING:

Units are available directly from me:
* $50 New Zealand dollars, $25 US dollars or 16 UK pounds each
* $60 New Zealand dollars, $30 US dollars or 20 UK pounds each including 3-
button serial mouse.
```

Controlling price is in New Zealand dollars, prices are subject to change based on fluctuating exchange rates and other factors.

User groups or clubs, contact me for information on quantity discounts. Dealership enquiries welcome.

Postage to most locations in the world for a few units will be $5 US dollars or 4 UK pounds, and delivery will take a week or two. Contact me for an exact figure.

The interface will be available locally in the UK very soon.

Enquiries: Email: mb@tos.pl.net

5230. STing?

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: ab616@chebucto.ns.ca
Message-ID: <6s5an3$l0d$1@News.Dal.Ca>
Source record: 94601

Where can I find STing? I have CAB and STiK but there is no local SLIP connections so I would need STing.

Thanks...

I have found a bug in NEWSie's window open routine that can cause some
random data to be stored in memory. It depends upon the width of the
windows being opened.

It is resolved in 0.92 (sent to beta test last week)

But it could be something entirely different.

Try to boot with ST-GUIDE off and then rename it as an ACC, i.e. don't
bootload it. If it then loads a reference to it is wrong.

By the way, where can you get english OLGA doc's?

5237. NVDI problem solved!

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <35e646ca.0@d2o29.telia.com>
Source record: 94608

All problems with NVDI and printing seems to have been due to that my old NVDI used the C:\DRIVERS folder and NVDI 5 is made to be installed in C:\GEMSYS ... the result was that the new NVDI somehow got bootloaded in spite of that all drivers in the ASSIGN.SYS path and NVDI.INF path was for the old version, and could not be used when printing. Like for example the LQ.SYS for Epson LQ printers never got to the right path when installed, instead the old LQ570.SYS was loaded and the printing went nuts.

If you've got that problem, move C:\DRIVERS C:\NVDI.INF and C:\ASSIGN.SYS to a subdir on your drive and reinstall NVDI 5.0. You might have to compare the new .INF and .SYS files with the old ones after the installation to be sure that nothing has been overlooked. When your new setup works just send the old files to the bit bucket.

And ... if anyone knows a lot about this subject (Magic&NVDI), I still have some questions to ask ... so mail me. In the mean time I'll be listening to my new Audio-CD (but no longer data CD as SPIN was) compatible ExtenDOS setup ...

Regards, K.Hampf

Many electronics component shops have them. I don't know if the Conrad
Electronic catalog (http://www.conrad.de) is available in NL, but they
have them for sure. Otherwise, try Maplins in the UK or good old
Radiospares.

Cheers,
Nick

> 1) Does anyone out there have a copy of Typhoon Thompson for the ST they'd
> like to sell?
>

no idea

> 2) How can I tell what version of TOS I have in ROM and what difference will
> it make?

If unmodified, it should be something like this:

Old ST 1.0
Mega ST 1.2 blitter support + bugfixes
STF/STFM 1.0/1.02/1.04 bugfixes + faster
STE 1.06/1.62 STE hardware support
Mega STE 2.05/2.06 New desktop + support for future improvements

To be sure, you should use a program like sysinfo. Look on an FTP site.
Anything under 1.04 should be upgraded for serious use.

>
> 3) Is there still Mac emulation available for the 520ST?

Not available as new. Spectre GCR was able to emulate a 68K Mac Plus a
bit faster than the original, but it's pretty hard to find nowadays. I
don't think it could run on a 512K machine though.

>
> 4) Are there RAM and STereo upgrades still available for the now ancient
> (but STill nifty) 520?

RAM upgrades yes, but you might better just get an STE instead. It will
make RAM upgrades much easier (standard SIMMs) and you'll have stereo,
plus other neat little things.

Cheers,
Nick

Actually, I don't think so. The original agreement had a short list of
the stuff that was bought, and this list omitted to specifically mention
the TT. I think this was probably just an omission, and that the intent
was to sell everything. They probably included the TT in the term "ST
line of computers", which, coming from the lawyer who probably wrote the
agreement, isn't very surprising.

Cheers,
Nick

Well, the show is over. By now you've heard all about it. But wouldn't it have been great to see and hear the speakers? Watch the BattleSphere Tournement? Play or even just SEE a working Computer Space Machine? What about Neutron Star, an Atari Pinball Machine? 5200 Tempest? Or how about hearing how Wiztronics is possibly going to release a stand alone lynx box for your tv(no lcd screen) that uses a Jaguar Joypad?

Worry No More! That's right. You can hear, see, and experience it all(minus tactile and olfactory feedback)! For $25 including shipping in the US, you can have it all. Just follow the link below!

And now for a production update. After a tough early week(my ide controller died on my new motherboard), I've logged 3/4 of the footage shot and will be hammering down this weekend to set up the outline of the tape and start editing. We're well into post production folks. Also, for those that need it, I can now get PAL copies of the tape.

-More soon.
-Mark "Stingray" Santora

5245. XaAES/FreeMiNT set up

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <904312454.1686.0.rover.c3adfca1@news.demon.nl>
Source record: 94616

Hi, again, once more

OK, had nothing else to do (???) so I thought "Give this XaAES a try".

Fetched the 6B-030 and the 7B versions from a site, went to grab FreeMiNT 1.14.7 from a site, and decided to put the whole test stuff on my K:\ partition. So, a new AUTO with Mint.prg, Mint.cnf plus the M��se.xdd for XaAES, created a K:\Multitos folder for the Bar.app, Bar.rsc, Moose.xdd (just to be sure), System.rsc, Xaaes.cnf and finally Xaaes.tos. Plus the Bar.inf in the root. Edited Mint.cnf to contain those lines as well, such as INIT=u:\k\multitos\moose.xdd etc.

Well, the boot went OK, got this msg FreeMiNT 1.14.7-beta, Initializing core memory plus Moose device driver installed, next I had the old TT-Med screen. Nothing Xaaes to find... BTW: couldn't find any LOGO.PRG in the packages at all.

Then copied the K:\Multitos folder plus contents to C:\, editted the lines in Mint.cnf back to ...u:\c\etc but still the same.

OK, I sum it up here: Freemint 1.14.7 has Mint.prg plus cnf plus Coldboot.prg... where does this one go???

XaAES misses the Logo.prg... what about it?

Do I need more Mint stuff? Docs for the version I got say really nothing at all, just a summary of differences between this and previous versions. Best info is found in the Mint.cnf example.
Isn't Freemint good enough??? Do I have to reorganise my C:\ for Mint? Note that I don't intend to go "Unix" or start with KGMD/KEMD... I just need it for XaAES.

Heck, I've got MagiC/NVDI etc. on that one, it was quite some work to get all that going OK (note my NVDI also drives my card and needs some old Matrix stuff also on this drive). I just don't wanna mess on this drive just to give XaAES a try, and especially NOT in the autofolder).

Even 1 small match in this enormous cave would suit me fine...

5247. Re: XaAES/MiNT Stuff

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <904318627.17988.0.spot.c3adfca1@news.demon.nl>
Source record: 94618

Hi once again,

OK, don't yell at me... after moving Mint.cnf to each of the two "Multitos" folders on C:\ and K:\ I saw some more: after Moose.drv loaded (or something similar) I got a further message Booting FreeMiNT plus Autoprogram AxAES v. 06, with all compile time switches enabled, plus three lines with Memory Violations, Fatal Error, you must reboot the system.

Whatever, cold boot, warm boot, still the same.

So I went for version 0.7. This time XaAES came up, but next it kept hanging in the alertbox for Thing 1.26. Disabled the use of Thing in the config, next I got to XaAES on the screen. Disabled all the accs before, because another alert for Freedom frooze the system. Tried the program launcher, but both Newsie and QED caused a Memory Violation pid 004 message. (These two are mentioned in the compatible list...)

Didn't try much more, I saw the screen, but using it doesn't do much good. Looks to me the stuff is still kinda buggy, especially alerts cause lotsa problems. Could it be the TT I'm using? Kinda weird, the 0.6 version I downloaded was the 030 version and it simply said "Memory violation". The 0.7 version is the 68000 version and does at least do something, although not being very usable. All the config is clean, i.e. only Freemint running, then XaAES, nothing else. Mode is TT medium, I don't even have one clue how to get it running on the card.

Still, I don't see this Logo.prg around and have no idea what Coldboot.prg is good for...
So drop me a match please, I'll see if I can strike it against my shoes...

Sorry, All...
When I started on my project to acquire descriptions of commercial software, I should have known better than to fire off multiple kilobytes of a comprehensive list all at once. Not surprisingly, there was not a single response. Allow me to try again on a smaller scale.

Give me thumbnail descriptions about the following (via email):

AC/Fortran; absoft; ANSI Fortran 77 Compiler with Debugger
Advanced Dungeons & Dragons/Heroes of the Lance; U.S. Gold/TSR/SSI
A.L.C.O.N.; Taito
Algebra II, Vol. 2; Atari ST Scholastic Series
Analyze (Spread Sheet); Micro Systems Software
Arcade Force 4; U.S. Gold; Indiana Jones and the Temple of Doom/
Metro Cross/Gauntlet/Road Runner/ 4 games in 1.
ArcticFox; Electronic Arts
Armour-Geddon; Psygnosis
A-Seka; Antic/Kuma
Atari HyperPaint; Atari
Athena II; iliad
Baal; Psygnosis/Psyclapse; Mega STe
Compatible;*ShrinkWrapped;$15.00 U.S.
Balance of Power; MindScape (1986)
Balance of Power\The 1990 Edition; MindScape, Inc. (1989)
Ballistix; Psyclapse
BatMan-The Caped Crusader; Ocean
BattleTech-The Crescent Hawk's Inception; InfoCom
(incl. Weapon & 'Mech Recognition Guide & Reference Card)
Blood Money; Psygnosis
BoBo; InfoGrames/Terrific SoftWare
Button & Badge Maker; IntraCorp

5250. FS/T Various Atari Computer Items

Newsgroup: comp.sys.atari.st
Date: 1998-08-28 00:00:00 UTC
From: Jim Lazarenko <jim_lazarenko@NOSPAM.powersurfr.com>
Message-ID: <6s6pgp$lnd1@burn.videotron.ab.ca>
Source record: 94621
Cross-posted to: alt.games.video.classic,comp.sys.atari.8bit,comp.sys.atari.st,rec.arts.startrek.misc

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask. I am open to reasonable offers on all items, please make all offers in U.S. Funds (buyer pays shipping). I am also be willing to trade for some shrink-wrapped or new cartridges (mainly rarer titles) for Intellivision, ColecoVision or various Atari systems as well as some rare Mattel and Coleco Handhelds.

If you are interested in any of these items, please respond to jim_lazarenko@NOSPAM.powersurfr.com (removing the NOSPAM section first).

Hardware Please make an offer
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 800XL No Power Supply
-Atari 600XL With Power Supply, RF Cable
-Atari 520 ST Missing all accesories
Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers Please make an offer
==========
-Paddles (multiple sets) -for Atari & Commodore units
-2x Suncom Tac Joysticks -for Atari & Commodore units

"The Atari A to Z" Book Shareware ASCII Text Release

Jargon, terminology and acronyms are the staple diet of any professional, technologist and hobbyist. The world of computing is no exception and to the uninitiated home or small business user, magazines, manuals and books can be very daunting. Written by someone who understands these frustrations and needs, "The Atari A to Z" isn't just a convenient encyclopaedia of modern computer terminology but a specific reference source of material pertaining to Atari computers for the ST, TT and Falcon enthusiast.

Whether you play games on an ST, run your business on a TT, or write music on a Falcon, this book is aimed at helping you get to grips with those magazine articles that are more perplexing than enlightening. In here, you will find many explanations, mini-articles and a plethora of other miscellaneous bits and pieces to help you gain a better understanding of your Atari computer. The material in this book was written with all Atari users in mind. There are simple definitions for the uninitiated and technical data for the experienced. You take what you want, when you want it. "The Atari A to Z" is a valuable addition to any Atari user's library.

These book files are direct ASCII conversions of the Protext files used for the fifth printing. Some typographical changes have been made to keep within the bounds of the Atari character set. Tabs were replaced with spaces. A carriage return and line feed terminates each line.

There have been some minor textual changes and some updates and revisions, especially in the Appendices. There are 2,239 entries, 101 tables and 128,000 words here.

"The Atari A to Z" book text files package is shareware and costs a minimum of 5 UK Pounds. Details are in the accompanying files.

These files and all my other software including PROFILE 2 - *THE* System Analyser are available on my web site:

|Right, Steve, I should have thought of that already. But I just did it
|and the exact same problem recurs.

Odd, but almost the same thing happened to me but with Look2, a scanner program for use with Epson scanners. It worked perfectly one night on the DirecT60 but not since. I tried reloading it from the master disc but it made no difference. It is not the scanner as it and Look2 work with my TT.

I presume that it is some interaction with another program or accessory as the main fault is cured when I omit NVDI from the Auto folder (but it is still not totally right). Why should these things work once and not again?

Is CAB ever going to support javascript?

I was on http://www.listbot.com tonight and started a list, everything went ok, they do have a notice that says I'm running Netscape 2 on this TT ;}

But I can't use the list owners page nor read their manual, it's all using javaascript nd CAB crashs with it.

Don't you all just love these things I find and bring to your programing doorstep?

I ordered one AdSCSI ST on May 6th 1998.
Made the deal via phone on May 7th 1998.
Didn't get any answer till May 29th 1998 and wrote a request of the kind
"What happened to my order?"
I got a very fast :) reply (same date) from ICD, with a nice "Sorry" and
the message that the adapter had been sent by
airmail on May 28th 1998.

Otoh: this happens quite often to me... :-|

Btw.: I run the AdSCSI ST with a Seagate ST1480N and up to now
it is all running like a "greased pig in an accelerator".
:)

As a matter of fact, there is a way to install an IDE disk into certain STs.
I don't know all the details, though. Perhaps Alex Yu at ATY computers could
help (atycom@pacbell.net).

> The problem is that none of the .ST files I create with DuST seem to be
> accepted by NoSTalgia. In particular I tried the Atari Computing reader disks
> nos 6, 7 & 8, and the installation disks for Imagecopy.

I've had the same problem with DuST, and been told that it has some major bugs. Instead I use imgbuild.exe on a PC that I have access to. Imgbuild has a nice auto-recognize feature that makes it better than DuST, plus it actually creates good .ST files. If you can get to a PC running DOS or Win95, you should use imgbuild.exe instead (Pages about PaCifiST usually also link to imgbuild).

DuST does contain a warning to not read Atari disks with recent versions of PC Exchange--and your Mac certainly fits that description with OS 8.1. I have it in my mind that disabling PC Exchange (and maybe MacLink Plus) would correct the problem--that DuST and PC Exchange may be conflicting--but I haven't tried it yet.

If you fix the problem, please let us know.

Regards,

Tom

> 2) How can I tell what version of TOS I have in ROM and what difference will
> it make?

A number of programs will tell you this. Get GEMBench and select
"Save"...the dialog that pops up will give you TOS, AES and GEMDOS
versions, and other info. Another program would be STATS.PRG; it tells
TOS and GEM version.

I also have this information by copyright date in the "Desktop Info..."
dialog for a few TOS versions up on my Web site: visit
<http://ic.net/~tjh/computers/atari/> and click through to the "FAQ."

> 3) Is there still Mac emulation available for the 520ST?

Nothing recent that I know of; just the old standbys like SPECTRE or MagicSac.

In my opinion, this is a bug in TOS or MagiC. This happens only
with very long URLs when CAB writes the URL into the window title
or info line. But TOS or MagiC seems to overwrite some data if the
title/info line is too long (I'm not sure what's the limit, but I think
it must be something around 80 chars). Newer versions of CAB will
truncate the URL before writing it to then window title, so this
bug will be avoided.

Package Price: $400 (US)+freight, or best offer. I would prefer to sell it all
as one package, but I may entertain offers for bits and pieces.
Inquiries should be directed
to: WFChris@aol.com

The package includes the following:
Hardware
1 Mega ST4 & Keyboard
1 SC1224 color monitor
1 monitor switch box
1 mouse
1 joystick
1 MouseMaster switch box
1 ICD 44 mb Syquest drive
1 SF314 external floppy drive
1 Cannon BJ10e bubblejet printer
1 Supra Modem 2400 (ok, its not very fast, but it was good enough for GEnie)
and, of course, the various and sundry cable/cord necessary for all.

Software
Applications:
Calamus v 1.09.6 & 1.09N
Flash
Clean Up ST
Word Perfect
Degas Elite
Data Manager
Word Flair
and various utility programs such as NeoDesk

Games:
Maniac Mansion
Empire
Star Wars
Gauntlet
Warlock
ArcticFox
King of Chicago
Thunderbirds
SimCity
Ancient Art of War in the Skies
Steel Empire
ShadoWorlds
Balance of Power (1990 ed)
Rorke's Drift

Railroad Tycoon
Storm Master
Populus
Power Monger
War in Middle Earth
Defender of the Crown
Lemmings
Hitchhiker's Guide to the Galaxy
F-16 Combat Pilot
Star Glider
Jeanne d'Arc (in German)
The Secret of Monkey Island
Autoduel
Hard Drivin'
Civilization
Realms
Their Finest Hour: The Battle of Britain
Frontier: Elite 2
Thrid Riech
Pirates!
and Chronoquest.

At one time, DMC now MGI, distributed LJ4 drivers with these
resolutions here in the U.S. Do you have older versions of SL? If so,
check them. The drivers are the same as came with 1.09N, just a
slightly different extender.

I've had similar 2 bomb problems, of varying intensity. Sometimes CAB would bomb out as soon as I loaded it and entered a URL. I tried all sorts of modifications with CAB and CAB.OVL and nothing worked. Then I went to the STinG tools and tried to resolve the hosts. Guess what. 2 bombs. When I deleted the CACHE.DNS from inside the STinG folder and started fresh, most of the sites that I was having problems with were available to me. Unfortunately, I've had to do this about 3 times now. This is using STinG 1.15 and the latest modules. I think I'm going to look over my archives disk to see if I can find an earlier version of RESOLVE.STX and see what happens.

Well, it's a little more severe than the problem that I was having,
and mentioned in the other post. This is what happened when I went to
the Start a List page - it crashed the whole computer, and this was
the info returned:

*** MEMORY BLOCK DESTROYED BY USER PROGRAM:

Address of MCB: $0122DD40
Data of MCB: $342C3132 $00008988 $01166BAC $012953A8

I dumped the memory to disk, and this is what I was able to recover of
the page:
==========

5274. Q: ST must haves

Newsgroup: comp.sys.atari.st
Date: 1998-08-29 00:00:00 UTC
From: Frank Traut <save2600@ticon.net>
Message-ID: <6saardcnl1@news3.alpha.net>
Source record: 94552

Hi all,

Been lurking here a while and thought I'd ask a question
that I'm sure has been asked before, but I finally landed
a nice 520ST package to play with and was wondering
what the very best games were for it. I don't really care
about sports and platform games, but I love pinball, RPG
and strategy games(all sorts - puzzle, military, etc).
Does Pinball Fantasies exist for the ST?

Having been an Amiga freak all these years(hehe), it's
really neat to be able to finally see what the ST is all about.
I think it's a pretty nice system and am having alot of fun
with all the stuff I got with it(lots of games and magazine
disks).

Basically, I am looking for any cool games that you think
I would like based on my description of my likes above.
If you have any ST games for sale or trade, please E-mail
me. I have a few ST games for trade as well as a bunch
of modern PC CD-ROMS that I would be willing to trade
for 'em. I have a listing of everything on my trade list(except
ST stuff) at my web page - http://www.ticon.net/~save2600

I think I would also like to add a disk drive and a hard drive
to my setup(if it's cheap enough), so if you happen to have
one or can point me in the right direction, I would sure
appreciate it.

Thanks in advance for any help!!

-Frank

5275. CAB and Java

Newsgroup: comp.sys.atari.st
Date: 1998-08-29 00:00:00 UTC
From: wordwork*@ctos.com
Message-ID: <35e81844.0@news.weldlink.com>

I am wondering if there is any effort to get Java going on the ATari.
More and more websites are including Java based stuff on their
websites, so more and more websites will become inaccessible. :-(

I wonder what to much is? Your looking at machines that compair in speed to Intel 486's which can be had for about $50.00 and are readily more expandable.

What, you figure a TT is worth $50.00? A second hand Falcon with the reputation it has should surely be worth at least $25.00;0/?

I have seen several TT's and Falcons advertised here lately for sale at prices I considered more than reasonable. I would suggest reviewing those adds before insulting any users here.

Here is a thought. Buy an old ST and get a Falcon name plate and keyboard from Best Electronics. Shouldn't cost you more than $175.00. Load an alternate desktop so people won't know it's not a Falcon, and keep the back of the machine towards the rear of the display case and no one will be any the wiser.

My 2 cents

MG

Greetings all;

I've just retired my Mega 4 from service. It's for sale!

System includes:

Mega 4 @ 16 mhz, sm 125 monitor (tilt swivel) 2 megafile 30's loaded with
software.
Migraph hand scanner, etc. Many current titles. Extra mono monitor thrown
in.

All in excellent working condition.

Asking $150 Canadian dollars,
I will not ship all this stuff - picked up or delivery possible in southern
Ontario.

Located in Owen Sound.

I'm about to release IFORM
This is Formula (Forth Musical Language) 4.0 with Flux extensions
9.8.8. for any ST, 1 meg min., NVDI.

IFORM is a complete music programming environment based upon the
computer language Forth. Input handling, multiprocessing, MIDI,
random functions, graphic & mouse controls, sliders, Csound score
generation, Sys-X for synths, screen-savers & more.

I'll be free on the Hollywood site.

[if you know Formula, the beta is up now]

> The boards seem pricey. $69.95 to $100.00
>
> Is there a less expensive way to go?

I have a new Falcon030 SIMM Board still left in stock which I'd like to get rid of. Its the Actionsoft SIMM Board (the one that Best Electronics sells for $99). It accepts a single 4mb _OR_ 16mb SIMM. You can have it for $50 (which is well below my dealer cost -- but like I said, its time to clear out my stock). If interested, respond in Email to: s.winick@worldnet.att.net -- I'll even throw in FREE Priority Mail shipping within the continental U.S. (48-state area).

There IS a version of Linux for 68000, mainly designed for the PalmPilot,
but it's kindof limited.

The next best thing is to install the KGMD distribution of MiNT.
Ont place to look for it is: ftp.funet.fi/pub/atari/

Also, UVK and some other virus protectors will install a boot sector that
is no longer MS-DOS compatible, so your PC may refuse to read it.

Using UVK (Ultimate Virus Killer), install a "PC boot sector" and it
should become readable again.

If these were Atari machines, I would say the MIDI port, as it was designed for safely networking over several meters. There are even some signal boosters for MIDI connections, sold in music stores.

Otherwise, it should be feasible to make an infrared pair of emitter/receiver to convert the SEND and RECEIVE pair to establish a basic link. This is fairly easy, basic opto-electronics skills.

Download DoitF030 docs and ... ... build one! :)

> Also, is there a way that I can determine if I have a Math Coprocessing
> Chip and or a 286 Emulator card?

Download a program that requires Math Coprocessor. If it works, you have
one :)
To see of you have a 286 Emulator, you'll have to open your computer. The
286 board should be located in the expansionslot just below the
powersupply. (But you'll need the softwaredrivers to make it work!)

Cheers!
/Peter

Good conditions i found while use the Falcon RamBoard from
WB-Systemtechnik. 98 DM(german Marks) as empty board.
Add the price of a 16MB PS2 Simm. (you can take it from the same source)

It works also fine with nemesis.

>Is there a less expensive way to go?

Only the parts are expensiv, dismount 4MB board and
plug in 16MB (14MB only) PS2 Simm board to the same place.
That's all.

>Also, is there a way that I can determine if I have a Math Coprocessing
>Chip and or a 286 Emulator card?

Use a 68882-20 chip for your falcon. Simple you found and empty
plcc socket under the psu board. Watch for pin1 direction!!

It works after plug in. No software, no jumper.

DOS-Emulator boards are really slow (and expensiv)
For what!? :-> You have an atari ;-)

Ken,

> Also, is there a way that I can determine
> if I have a Math Coprocessing Chip...

Well, you can open up the case and see if there's an FPU in the socket or if its still empty. Or, you can run a program called SYSINFO (you should be able to find it for downloading at one of the online sites) which will tell you EVERYTHING about your system. Its an excellent piece of software that everyone should have anyway.

Sheldon

Shouldn't this be \ALL.REF? (But I don't think this is the cause of your problem).

Just double-check that you haven't mixed up the hyphen and underscore in one of the file or folder names - as you know you can't enter a hyphen from the Atari file selector but can from some alternative ones, and ST-GUIDE uses a hyphen by default!

Personally, I don't think it is a good idea to keep these files on C:, which is generally thought should only contain stuff used for booting. Mine is on D:\ in the folder ST_GUIDE\ST-GUIDE\ containing all the executable programs and a copy of ST-GUIDE.INF, and ST_GUIDE\GUIDES\ holding all the guides, with only ST-GUIDE.ACC and another ST-GUIDE.INF in the root of C:. I am not saying this is the only way to arrange matters, but it works for me!

> it work for me?

I know I replied to your entire message via e-mail, but in the event anyone else was interested, I thought I would answer this section in the newsgroup, as well.

Yes, with an RGB hookup, color is assured, regardless of PAL/NTSC timing issues.

OK, I'm back on it... Looks like there's not many others trying XaAES around (or they've given up...).

Well, at least it had something to do with the Mint.prg version, so I fetched 1.12 and put that one in the Autofolder and at least I got one bit further: Thing would run from XaAES... and that's about it. Any other program launch, whether directly from XaAES or thru' Thing will create a "exit code: 2560, leaving MiNT" message followed by a smaller or larger row of bombs. Even the prg's in the "compatible list", Newsie, QED or Gemvieuw won't run. Either the prg starts but then freezes the system when you open a file or something alike, or the program start itself freezes the system. Even tried fVDI 0.85 with it, no way...

I subscribed to the mailing list for XaAES, will see if there's any development at all... trouble is, I'm not a programmer myself, so can't do much about it. OTOH, I do hope it's being developed further into a working environment. Ideas are OK, and a free MT, multi-threaded OS wouldn't be wrong at all. So, keep on going, guys!

There is no reason why you shoulnd't be able to read this cartridge on
the Hades. HDDRIVER doesn't make a difference in this respect between
Hades and HDDRIVER. You should check your resident programs.

> I was disappointed that I could not read IBM formatted ZIPs unless I

> never been able to get BigDOS to run on my Hades. :-(

Simply partition DOS/TOS compatible partitions with HDDRUTIL with the
option >TOS and DOS combined<. This way you don't need any additional
software for DOS or TOS in order to exchange data, no MagiC, no Big-DOS.

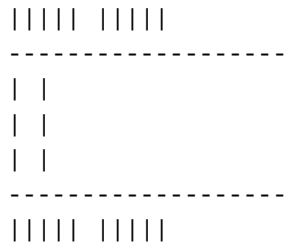
From: dipching@ping.be
Message-ID: <35ea783c333691@ping.be>
Source record: 94581

Firstly, I want to apologize to post this article here because I have no access to comp.sys.atari.sts.tech for the moment ...

Somebody among you surely will be able to say the memory amount of the following IC ?:

OKI JAPAN
M514256H-45J
41455029A9Z

This IC is like that:



There are eight of them on my Nova card, and what I'm searching about is : if these IC are well 256 Kb one ... because, if that's the case this will prove that my Nova own 2 Mb video memory ...

This should allow me to display 1024*768 in 32k colors ... Yes ? No ?

This Nova card is an ATI Mach32 ... Also known under "Super Nova Plus 2" ...

Thank you for any answer

Jo

It sounds like 4x256K chips, i.e. you have a 1Mb card. I can't say for
sure though, but it looks very much like the configuration on my
own card.

> This should allow me to display 1024*768 in 32k colors ... Yes ? No ?

If you have 2Mb - yes.

Hi Jo,

well, 2 Mb videoram should allow for around 800x600 Truecolor, 1024x768 in 256 colors (actually it could do 1280x1024 in 256 colors). My TC1208 has 2 Mb as well, the physical limits are 832x624 Truecolor and 1280x1024 256 colors.
The first one is my regular rez. BTW, is it a VME card?

Hello,
I use the Vantage 2000 myself and I can recommend them without any doubt.
They use standard 72-pin SIMM:s, either standard or EDO, but some models don't work, so you should buy the SIMM with an option to exchange to another brand if it doesn't work.
Here in Sweden, they're sold at SEK750 excluding the SIMM for new cards.

You are in luck Andy ... IF it is same as CM8833 then Maplin Electronics do a ready made lead, it will be in their catalogue under 'Atari ST monitor lead' believe it or not. Otherwise you will need pin-outs for monitor and atari and appropriate plugs - again, the atari monitor plug is available from maplin.

The story continues:

(Well, actually I had some E-mail replies to the stuff in this NG and I saw some screenshots of a working version by Craig so I'm not giving up that easily...)

Right, Katherine gave me some hints.
Glad I've got Thing. It has some options about Memory Protection for every program, and up till now I never did a thing with those.

I'm still not sure what is the best setting, but selecting "Global" and activating the "shared" box, at least makes the stuff more workable.

I can load files into QED (still got v. 4.00 here), NOT save them but at least it doesn't freeze now upon "load".
Thing lets me handle stuff more decent too, I can change settings and save them to disk as well. Newsie would start up, but then it froze somewhere. Even the task manager sometimes gets me out of a frozen client.

Furthermore I got it working on the card too (832x624 32 bit mode) but this on the Matrix drivers and most of the widgets don't show (just the boxes)... problem of the bloody Matrix drivers, had the same when I started with Freedom and also with That's Write. I guess the NVDI drivers will take care of this as well, but those are only working on my MagiC partition and I'm not gonna change that one.

The next one is upgrading to the latest Mint kernel (isn't that 1.15 now?) but the problem then is: how to handle tgz/tar archives? Yup I know that was discussed here recently, but then I wasn't interested in it, so you know what happened... :-)

Next Q: what could be the best setting for memory protection of individual programs in Thing? I just tried one, which immediately resulted in better handling, but it could be better, maybe. Don't know nothing about it.

One thing further: I think the handling of the mouse in XaAES is sluggish, to say at least. No way of "fast clicking around", like handling an old T-Ford...

Well, so much for the continuing story of XaAES, but it comes to a stage where it becomes interesting to try it out.

Will keep you posted (unless someone tells me to stop)

So far I've simply replaced the interal IDE the Falc came with with a 814
mb Toshiba MK1926FCV IDE drive....then I boot with my IDE driver disk in
the floppy...I get the memory check, then I get the hard drive check and
it says "ID 16 _______" and correctly identifies the drive
but then it says "ID 15 UNIDENTIFIABLE" and bombs

I believe I need new driver software, correct?
Can anyone help recommend or point me to where I could find some?
Thanxs a lot!
-phil

This is what I thought also. I will tell you I don't have faith that
My Hades is 100% healthy, and I've felt that way since the machine was
new. Unfortunately, my dealer has been less than easy to get in touch
with lately. :-(I should go visit the Medusa web site.

Someone else mentioned this, and I've partitioned a cart for testing,
but haven't been near a DOS machine to try it yet. My original
impression was that I cuold just put the cart in the drive and go.

Thanks for the reply, Uwe.

A question, does there need to be a ZIP disk in the drive at boot up
for HDDRIVER to grant access to the drive? With 7.54, I've noticed on
the Hades that if the drive is empty when the computer is booted, I
cannot access the drive after inserting a disk. I don't remember it
being this way in 6.22.

Thanks again.

from mint with a shell:
tar -zxvf filename.tgz
or
gunzip filename.gz
or
tar -xvf filename.tar

>
>Next Q: what could be the best setting for memory protection of individual
>programs in Thing? I just tried one, which immediately resulted in better
>handling, but it could be better, maybe. Don't know nothing about it.
If memory protection is enabled, GLOBAL would be the best choice.
Yet many prog work under memory protection with PRIVATE.

>
>One thing further: I think the handling of the mouse in XaAES is sluggish,
>to say at least. No way of "fast clicking around", like handling an old T-
>Ford...
forget about xaaes.

>
>Well, so much for the continuing story of XaAES, but it comes to a stage
>where it becomes interesting to try it out.
xaaes was nice. and still nice for a programer project.
But ain't an aes for serious users. It is an unfinished program.
What would happen if a program tries to access of of those missing
calls?
crash.
simple crash, GLOBAL or PRIVATE or anything. Just a crash.

I'd checked 1.09N and SL but the drivers are the same!

ITMT Martin has sorted me, it looks like there's something up with the
implementation of PCL5 which I can't investigate until I get the printer
manual printed off at work - it's PDF on a CD-ROM which Ghostscript won't
read!

> colors.

These resolutions would ofcourse work, but they're *not* the limit for
a 2Mb card :-) I'm using these resolutions on my 1Mb card
(864x800/16bit), and with a bit of math you'll see that with 2Mb you
can easily use 1024x768 in 16bit. And with 256 colours you can use
1600x1200 (if your monitor supports it).

Hi-

I've grabbed shareware (?) program SoundMerlin from ftp and loaded it into my Mega4 ST, looks like a cool program for sample manipulation but I'm very frustrated by my weak German language skills and the lack of any other documentation. Can any users (or maybe the authors) help me with some basic questions of compatibility, set up and operation??

Also, I've found a recurrent problem with this and othe sample players: occasionally they will only play the first little fraction of the sample, anybody know what that's about?

Greetings Atarians!

Louis, are you sure that you are trying the latest version? I know that Johan Klockars did put some work into it in July this summer, and also released the sources for that version on his FTP.

As far is I know, he sorted out some quite nasty bugs in that version, and I found that it worked a LOT better on my computer than the old beta7-version.

I m a bit more positive to this project than K.Ellis, since I think it would be quite nice to have a free & stable aes out there. Since I m not a programmer either, I can t participate in the development, but I know that Jo Skarstein and Johan Klockars have been looking at the code to see what can be done. As I said, I hope that the development will continue!

Regards,

Joakim

BigDOS does work on the Hades. Before I was using freeMiNT 1.15beta, which
supports DOS partitions, I occassionaly used bigDOS on my Hades.
The loading order seems to be very important. With the following order
bigDOS works

FPU__3.PRG
EMULATOR.PRG
XMENU.PRG
JAR124.PRG
STA_VDI.PRG
XBOOT.PRG
NVDI.PRG
NOVACAL.PRG
ARTSEVNT.PRG
TOSFIX.PRG
METAXBS.PRG
BIGDOS.PRG
FFSEL.PRG
DRVIN.PRG
MFP.PRG
SCC.PRG
RSVX.PRG
MINTNP.PRG
>>
>>Simply partition DOS/TOS compatible partitions with HDDRUTIL with the
>>option >TOS and DOS combined<. This way you don't need any additional
>>software for DOS or TOS in order to exchange data, no MagiC, no Big-DOS.

Yep that's true. I'm using this to exchange data with my brothers Mac G3.
No probs whatsoever.
BTW: With the latest freeMiNT 1.15 beta release this is even not needed.
One can read IBM formatted zips problemless.
>>

>A question, does there need to be a ZIP disk in the drive at boot up

>the Hades that if the drive is empty when the computer is booted, I
>cannot access the drive after inserting a disk. I don't remember it
>being this way in 6.22.

In the past (with HDdriver 7.50) with freeMiNT 1.12/1.14 there was
certainly no need to do that.
Now with freeMiNT 1.15-beta-2.7 I found that there must be a Zip disk in
the drive at boottime otherwise I only get the contents of the drive. I
can't open any file or dir however. If I try I get a TOS -14 error.

David. I "ordered directly" off the web and I've been doing "some
waiting" for nearly 3 months. *That's* what they mean by "some waiting".

Check out the other thread: [ICD][problems?]

Source record: 94515

Yeah! Thanks to Kent at Systems For Tomorrow, I've finally gotten my greedy little mitts on a copy of Crown of Creation for my Nemesized Falcon. First impressions: looks good. It installed from the 3 HD floppy disks with the included install program with nary a hitch, onto my hard drive. It runs from Neodesk/Geneva with no problems, but it does leave a few artifacts when you exit the game. (this is no problem though, just pick Reload DEFAULT.INF and its fine). COC 3D runs fast and smooth on my Falcon with the Nemesis accelerator. Graphics are very well drawn and dark, just the way I like'em. The Jag joypad is supported and IMHO seems to offer the best control. Well, thats just what I've found so far (hey, I've only had it a few hours so give me a break!) ;-)

PS Don't punch F-10 when exploring
the keyboard, its surrender! ;)

5345. A-MAN.PRG & other questions ??

Newsgroup: comp.sys.atari.st
Date: 1998-09-01 00:00:00 UTC
From: cstanley@zetnet.co.uk
Message-ID: <6shvpbghu1@roch.zetnet.co.uk>
Source record: 94516

This program came with AV_SERVER but, since I am not overly familiar
with German and RufTrade translations of the doc does not give much help,
its purpose escapes me, though I do normally have it present.

I do not have the author's email address to ask him (Sven Kopacz),
so would anyone explain A) what is it for and B) do I need it and
therefore C) what does it do?

I use Magic 5.11, NVDI 4.11 on a TT with TOS 3.05.

- Which reminds me: why does PROFILE2 not recognise the TOS number
under MagiC, though it does under simple TOS (Mark? It reports TOS
v 3.05 when I use TOS; but v 3.00 when I use MagiC).

- And: are we in the UK ATARIdom using PAL or NTSC? Profile2 says
my TT Monitor is using NTSC, but several posts have referred to the
PAL system, the UK TV broadcast system. So which am I using?
And does it matter?

Finally: does A-MAN.PRG translate into English as A-ONE.PRG or not.
If so, why? Hehehe!

Charles.

What driver software are you using.

The latest Atari driver (free) is AHDI 6.061. If you want the
best/fastest/most compatible driver around, it's Uwe Seimet's HD Driver,
but it's commercial.

http://www.umich.edu/~archive/atari/Diskutils/ahdi6061.lzh

Right, I'm back again too...
Fetched this xa7tst6 archive and you won't believe it, but I think it's a great improvement... Tell ya, for the first time CTL-ALT-TAB works decent here!

I even managed to get fVDI active, tho' not completely. I noted somewhere the small fonts of it were active (but strange enough NOT in the menu bars), but I couldn't choose from anything else but the systemfont. Also, some boxes appeared in inverted colors. At least, it didn't crash or freeze the bunch.

Nice surprise (tho' I didn't check that with previous versions): Graftool was very well behaving. Only no saves, like in QED. Everything else, manipulations etc. went perfect.

Like I said, the menu bar swapper finally works (before the key-combo blew up the whole bunch), and even CTL-ALT-R managed to get me out of a hung system, without an exit code.

Johan, have you (or the other bloke) rewritten Moose.drv, there was another one in the archive, and I changed my old version for this one.

OK, in the fridge when I'm not testing, then... :-)

MagiC has information specific to itself in headers strung off its
MAGX cookie. These have to be interrogated to get the proper magx
version information. The version number it bungs into the same place
as the Tos one is (I guess) just an approximate value based on its
abilities compared with similar Tos versions.

Hallo.

Wollen Sie den TOS-Markt unterstï¿½tzen?
Wir auch!

Wie vor 4 Jahren auch schon, will sich die Redaktion der ST-Computer in
Zusammenarbeit mit der Milan Computer GmbH mit Ihren Stimmen dafï¿½r einsetzen,
daï¿½ das Thema TOS/Atari/Milan auch wider im WDR-Computerclub aufgegriffen wird.
Speziell im Hinblick auf die Themennacht im November, fï¿½r die Vorschlï¿½e
willkommen sind, sehen wir eine gute Chance, duch Ihre Teilnahme einen
TOS-Beitrag durchsetzen zu kï¿½nnen, z. B. die Vorstellung des neuen Milan.

Auf der Milan-Homepage finden Sie daher ein eMail-Formular, das es Ihnen
ermï¿½glicht, den WDR-Computerclub Ihren Themenvorschlag direkt zukommen zu
lassen.

Bitte helfen Sie uns, das TOS-System wieder in den Brennpunkt des Interesses zu
bringen und nehmen Sie an dieser Aktion noch heute teil!
Besuchen Sie am besten gleich:

http://www.milan-computer.de/html_d/news34.html

und fï¿½llen Sie das eMail-Formular, das Sie dort finden, aus.

Bitte posten Sie diese Mail auch in andere Computernetze ...

Dankeschï¿½n!

Hi,

If you spare a few moments to answer any of my questions, I'd be Sooooo grateful!

1. AFAIK, the ST machines that Atari made were

520STF
520STFM
1040STF
1040STFM
Falcon

Is that correct ? I last used my Atari 1040STF some years ago and have no idea on what's new.

2. Would the newest Atari (Is that the Falcon?) run my old 1040STF software (STOS and Cubase) or
would I need to buy them again for a newer machine ?

3. Whilst I remember that the 1040ST was THE musicians tool, has it been supplanted by a newer Atari ?

Thanks

Harvey

The STe range, Mega ST range, since you have Falcon, the TT range. And if you're talking STf then there's 520 ST, 1040 ST, I even believe some were sold of 260ST too.

> Is that correct ? I last used my Atari 1040STF some years ago and have no

STOS could be a problem, but maybe with pathces or the Backward program.But, Cubase is better if you do buy the Falcon version. It has direct to disk recording and such. I am not too sure about the differences though!

> 3. Whilst I remember that the 1040ST was THE musicians tool, has it been

IIRC there was a 260 ST, you've missed out the 520 STM, you've missed all the Mega's (Mega ST's 1, 2 and 4 and Mega STE), you've missed the original (and rare 520 ST, there were the Stacy portables in a variety of memory and hard-disk configurations, the ST-Book laptop and the TT I guess would count too. Before anyone who doesn't know asks, the Portfolio is not a TOS machine, I know, I've got one. Although badges were made for 4160 STE's I don't think the machine itself was ever officailly released, though lots of us now have STE's that proudly proclaim their 4Mb status with the badge, thanks to Brad at Best Electronics taking them to every show he goes to ...thanks Brad:-)))
>
>2. Would the newest Atari (Is that the Falcon?) run my old 1040STF software
>(STOS and Cubase) or

The Falcon runs some versions of Cubase, one day I'll try it with Cubase v2 if no-one else has, but AFAIK Cubase 3 and up will run OK on Falcons. STOS....why b other? Even if it will run, most of the software it will produce won't....wel not without some patching anyway...

>would I need to buy them again for a newer machine ?
>
>3. Whilst I remember that the 1040ST was THE musicians tool, has it been

Yeah, the 4160 spec STE is the baby to have, load of ACC's and still tons of space to have a full Cubase installation and a huge area for the song.....
NVDI makes a big difference too, and apparently the Veloce 020 accelerator is compatible so you should have a flying machine available if you have an STE and

about 120 UKP to spend on it, IIRC in mono mode it's damn near as fast as a Falcon...

I've not had problems with Win95 disks transfering to either my Falcon or my STE
under TOS2.06, it might be a problem with early TOS versions. Also I've been
able to easily transfer stuff burnt on PC CDR drives to the Falc and STE and
from CDR's off the Falc onto PC. Apparently the new version of CD Recorder Pro
will run on an ST so you could use CDR....

I think that the 1084ST (Stereo and Tilt/swivel, IIRC) had a different
connector. DATIC sold them in Sweden, don't know about UK, but if they have
8833 cables, they should have 1084 ones as well.

My SLM605 prints a diffuse horisontal line across the paper at 1/3
from top. I have tried to clean it with no positive effect. The drum
looks OK.

Has anyone been able to fix this?

Someone else did ask the same question some time ago with no response.

Source record: 94463

Unfortunately a small bug appeared AFTER version 0.42 in the NNTP client.

It was impossible to post an article in a newsgroup with an NNTP tracing
level less then 3.

All works normally with "nntp trace 3" or higher values.

Will be fixed in next version. Still working at Atari serial port routines to
be able to work multiline.

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

5368. Value of Atari 520ST

Newsgroup: comp.sys.atari.st
Date: 1998-09-02 00:00:00 UTC
From: epp@110.net
Message-ID: <35EDB7AB.F7A4EB8C@110.net>
Source record: 94464

What would the value be for a used Atari 520ST, upgraded to 2.5 Mb, with the following:

loads of software, three 3ï¿½" floppy drives (two Atari single-sided, one GTS-500 double-sided), SC 224 monitor, spare motherboard with TOS 1.0 (520ST itself has TOS 1.4 in it), two power supplies, and two mice.

This is presuming such a system would be purchased at a garage or yard sale.

Thanks.

Yes - and the same thing with Windoze NT4WS as well! :-(

>and if so do they know the solution?.

I found one (for me) but it isn't easy.

Format a DD 720K disk on the Atari. Format a HD 720K disk on the PC.
Take disk out of PC, place into Atari. Get out KnifeST - load
bootsector off PC disk. Reinsert Atari disk. Save PC bootsector on
Atari disk. Atari disk is now reliable in both machines.

???!!**?! - but true.

>I suspect Windows 95, or is it that my TOS version is to old, I would be
>interseted to see if both 720k ST's and 1.44MB TT's/Falcon's have the same

>Disk.

I suspect for us few folks who have really wierd problems like mine
that it is a combination of things. Atari/PC drive head alignment,
Windoze sillyness, timing issues, DD/HD media etc.

Fine and dandy.. I'd LOVE to be able to transfer files between my Falcon and my Mac. However, I don't use Mint or Sting.. I assume they are alternate OSs.. I mainly only use my Falcon for music, so running an alt OS makes no sense, as CAF doesn't run under them.

It would be a MUST to write a driver that works with TOS.. at least to me.

Yea, I was a long time supporter of theirs, but they have lost me with their current policy of accepting orders, and never ever talking to a customer. I realize it costs money to answer a phone/ write e-mail, but then they need to communicate to their customers _somehow_. When they do not bother to confirm an order done over the internet, on unsecure lines no less, I have said good-bye to ICD. No more.

It could be either the mouse (try removing the ball, and turning the
rollers with your finger), the mouse cable (try bending it around, this
sometimes helps), the connector (bad solder joints after intensive
plugging/unplugging).

Either clean the mouse rollers, change the cable (nick one from a cheap
PC serial mouse), or re-melt the joints on the faulty connector with a
soldering iron.

Cheers,
Nick

MiNT is an alternative OS, but STiNG is a single-TOS TCP/IP stack.

> It would be a MUST to write a driver that works with TOS.. at least to me.

STiNG is just that, but you'll need to set it up for LAN networking:

5381. Quick questions

Newsgroup: comp.sys.atari.st
Date: 1998-09-02 00:00:00 UTC
From: Stephen Moss <sgm23@eng.cam.ac.uk>
Message-ID: <6siu0qdbq1@pegasus.csx.cam.ac.uk>
Source record: 94525

Q1)
Where can I get hold of a working Forget Me Clock cartridge and associated software with in the UK either new or second hand?.

Q2)
In the past some people have had a minor dig at my previous postings because they were not word rapped, I assure you that this was down to the software and nothing to do with me. I am now using new software which should word wrap this posting. Can someone confirm this?

Q3)
I have been sucessfully transfering files from a 486 PC running Windows 3.1 to my STfm (TOS 1.2). I now have a new pentium PC running Window 95 and since then every time I try to load a file from the floppy to my ST it keeps flashing that alert box which says that the data on the disk is damaged or the drive is not connected.
Has anyone else had this problem and if so do they know the solution?.
I suspect Windows 95, or is it that my TOS version is to old, I would be interseted to see if both 720k ST's and 1.44MB TT's/Falcon's have the same problem as me, and before you suggest it yes I am using a 720K MS DOS format Disk.

Thanks,
Stephen Moss.

Hi,

actually, I was talking about TC, not 16 bit... For the Matrix that's 24 bit plus 8bpp overlay. Or 16.7 million colors, if that sounds better. Rite, I know you need a display of 4000x4000 pixels for that, but 24 bit is a bit (you could also say 8 bits :-) more than 16. Once thing for sure, Jo could do 800x600 TC with his one, provided he HAS 2 Mb on the card.

Hi Joakim,

well, first of, I found that my postings go somewhere down the drain, since yesterday. May be XaAES did do something it wasn't supposed to... I know (and I mean I KNOW) the msgs have been sent, but I don't see them back here).

Actually, the reason for starting with XaAES WAS this msg from Johan about it. I deleted the msg (stupid), so I went to the XaAES site via Jo's link pages. Latest version on the official XaAES page was 0.7. I'll have a look at Johan's site for MGIF etc, maybe he's got new stuff mentioned there.

What I said in my last posting was that I had put back XaAES into the fridge, because simply I couldn't do much with it. I was running with a MINTNP.PRG (version 1.12) and when setting memory protection in Thing for individual programs to "Global/shared" that created the best conditions to actually do something with it. Thing worked best in it, QED did at least load files but not save them, Gemview wouldn't run at all, Newsie froze up somewhere after starting. That's as far as I've got.
Now first, I'm gonna make copies of the files, then check postxxxx.txt and the post.mbx files, next send them off and see what happens. In the meantime I'll check on Johan's site for more XaAES stuff. Tks for the hint.

CU NeXT msg,

>therefore C) what does it do?

I started to use this some time back but gave up because of probs. I
even seem to have thrown it off the system completely as I can't find
its archive. IIRC it was a way of hooking in a font selector. I now
use MAGCUFSL to do this (although not without a few problems).

>- Which reminds me: why does PROFILE2 not recognise the TOS number
>under MagiC, though it does under simple TOS (Mark? It reports TOS
>v 3.05 when I use TOS; but v 3.00 when I use MagiC).

Ha ;-) I have spent some time with this one! Basically it's because
Magic installs itself this way so as not to confuse ITS TOS with other
single tasking TOSs.

Normally you don't notice it EXCEPT (and Petter Tonneff will tell a
story about this!) if you try to use Cranach (an art program). This
thing checks the TOS version number and expects something >3.00 - if
it doesn't get this it fails! I eventually worked out a patch for
Petter so he can now run Cranach under Magic.

>Finally: does A-MAN.PRG translate into English as A-ONE.PRG or not.

It's more likely to be (a) broken solder joint(s) where the mouse
socket is attached to the motherboard. It's a weak part of the
physical design and tends to break if the machine has been used a lot
for games (pluggin/unplugging joystick).

How confident are you? You would need to strip the ST so that youcan
get to the underside of the PCB and then run a fine soldering tip over
the socket/PCB joints.

To confirm the diagnosis move the mouse while (gently) wiggling the
mouse plug in the socket.

It's not. If you have pictures with "fading" colors (e.g. a sunset),
you'll have to dither them for 15/16 bit direct color displays, as they
look quite awful otherwise (look at the example pictures on
http://www.esc.de/homes/guivol/fixpix/ if you don't believe that).

Ciao

Thomas

That would be at: ftp://rand.thn.htu.se/pub/XaAES/xaaes7+s.lzh

I currently don't have any links to the XaAES stuff from my WWW pages at
the same site.

There is actually no binary version of the beta7+ release available yet,
but the xa7tst6.lzh archive is only four days older.
I could of course upload a binary version if someone requests it.

>>As far is I know, he sorted out some quite nasty
>>bugs in that version, and I found that it worked a

Lots of bugs were killed, incompatibilities fixed and performance/features
improved.

>>LOT better on my computer than the old beta7-
>>version.

Some programs still don't run, but far fewer than with beta7 and there
should be no more of the multiple window redraws for example.

>>know that Jo Skarstein and Johan Klockars have
>>been looking at the code to see what can be done.

I have done a few more things since the beta7+ release, but nothing very
important.

The most important things to do right now is probably to make the mouse
rectangle checks (what used to crash Thing dialogs in beta7) work again.
Most programs I've tried work relatively well without those, but some
behave strangely and a few simply don't work at all.
Unfortunately, this is rather closely tied with the mouse handling (what
moose.drv does) and non-direct calls, which I believe need a whole new
implementation. I would have done that already if I hadn't been so
discouraged by the MiNT process synchronization/communication facilities.
I've actually considered rewriting those parts of MiNT myself, but I think
I'll wait for Fenix instead. Making those things efficient in MiNT would

probably require a rewrite of most of the low level stuff.

>Actually, the reason for starting with XaAES WAS this msg from Johan about
>it. I deleted the msg (stupid), so I went to the XaAES site via Jo's link

>at Johan's site for MGIF etc, maybe he's got new stuff mentioned there.

The new beta7+ is probably not available anywhere but at the address I
mentioned above. Craig Graham (the main XaAES programmer) hasn't appeared
on the mailing list for quite some time.

>What I said in my last posting was that I had put back XaAES into the
>fridge, because simply I couldn't do much with it. I was running with a

Not many people could do much of anything with beta7. The earlier betas
actually worked better IMO.

Get beta7+ instead as I mentioned in another article a couple of minutes
ago.

>INIT=u:\k\multitos\moose.xdd etc.

Uhm, Moose is a device driver, not something you can start via INIT.

If you mean XaAES itself, I'd actually recommend running it from within
the standard AES by double clicking on it. Easier to handle crashes
that way.

>Nothing Xaaes to find... BTW: couldn't find any LOGO.PRG in the packages at

IIRC, the logo is no longer a separate program.

>Do I need more Mint stuff? Docs for the version I got say really nothing at

Only mint.prg and moose.xdd should be needed.

>Isn't Freemint good enough??? Do I have to reorganise my C:\ for Mint? Note

FreeMiNT is better than the old MiNT.

>Matrix stuff also on this drive). I just don't wanna mess on this drive just
>to give XaAES a try, and especially NOT in the autofolder).

You should not need to do anything strange to get XaAES beta7+ to work,
but many people don't seem to be able to run the old beta7 at all.

Answered in the Quick FAQ...

if it's an STE, then you're in luck, as there is a internal IDE adaptor
board available, especially designed for 2.5" drives, from TUS:

http://www.tusdev.demon.co.uk

Nothing available for the plain ST/STF though. Maybe you can get a cheap
STE to upgrade.

Cheers,
Nick

Other than on the second hand market, I don't know. The setting software
for that cartridge will no longer work after 1999 even though the clock
will keep running. Be prepared to see a lot of these carts for sale on
Jan 1st 2000.

Yes, and you are using DD disks too, not HD ones with a piece of tape
over the HD hole ?

Do not transfer files with long filenames and don't use folders on the
disk. Try copying the files over from DOS instead of using Windows.

TOS 1.02 will not format DOS compliant disks, but should be able to read
them. Maybe the drive has misaligned heads.

Cheers,
Nick

In a former life as an exotic dancer, tjh@No-Spamic.net (Tom Hopper) wrote:
> I've had the same problem with DuST, and been told that it has some major bugs. Instead I use imgbuild.exe on a PC that I have access to. Imgbuild has a nice auto-recognize feature that makes it better than DuST, plus it actually creates good .ST files. If you can get to a PC running DOS or Win95, you should use imgbuild.exe instead (Pages about PaCifiST usually also link to imgbuild).
>

Cheers - I've actually got a PC emulator on the Mac (whatever the cheap one's called, RealPC I think) it's only running DOS, but that's good enough for this application. I gave it a go and it works fine. The PC emu uses a shared folder which lets anything sent to E:\ appear in a folder on the Mac, so I can get the .ST files into NoSTalgia that way. And believe it or not, it actually works!

Thanks for your help.

> - Which reminds me: why does PROFILE2 not recognise the TOS number under MagiC, though it does under simple TOS (Mark? It reports TOS v 3.05 when I use TOS; but v 3.00 when I use MagiC).
>

Ahh... this is one of the great mysteries of MagiC (like why haven't they implemented AES 4.1 style toolbars yet!?). When I was working on the patched version of SAM, I proudly proclaimed that it worked under MagiC. "No it doesn't" came the message from a few emails, so I recanted my claim. "Yes it does!" came several more emails, so we investigated further.

It turns out that MagiC gives itself a different apparent version of TOS, depending on what machine you're using. As you've found, a TOS 3.05 machine reports TOS 3.00. As I recall, a TOS 2.05/6 machine reports 2.00. A 4.04 machine reports 4.00 (I think - I can't remember for certain).

As I recall, this meant that SAM wouldn't work on a Mega STe running MagiC, because it was looking for 2.05 or greater.

> - And: are we in the UK ATARIdom using PAL or NTSC? Profile2 says my TT Monitor is using NTSC, but several posts have referred to the PAL system, the UK TV broadcast system. So which am I using? And does it matter?

UK TV is PAL at 50Hz. Many TVs (and monitors) support NTSC at 60Hz. If your TT is a grey import, it could have a US modulator, or you might inadvertantly be running something which sets the output to 60Hz (gives a steadier picture). Or Profile2 might be wrong ;)

It shouldn't matter, but some games and demos are fussy, as they use the video system for timing information.

Since I m not a programmer either, I can t participate in the development, but I know that Jo Skarstein and Johan Klockars have been looking at the code to see what can be done. As I said, I hope that the development will continue!
>

I'm also very positive about it; I think we _need_ a free AES because there will come a time when it's no longer practical for commercial companies to stay in the Atari game. The sooner we have something free which is owned by nobody, the better for our long term chances of continuing to use Atari software. And the greater our chances of being able to add new OS features to bring us a bit closer to the rest of the computing world.

I haven't checked out the new beta of XaAES. I tried all the betas whilst Craig was still working on it, and was part of the mailing list then, but hadn't realised it had been picked up again. I really hope work continues this time, but alas! I'm not enough of a programmer to be able to contribute.

Some of the ideas we had for XaAES were great, and it'd be good to see them implemented at last. In particular I made a call for tear off menus which Craig misinterpreted to give us the unwieldy tear off menu bar of Beta 7. But ideas such as this are what I like about XaAES; it's _our_ GUI to do with as we please. If anyone has a great idea for a GUI enhancement, there's a chance to see it realised. I think we should be congratulating and encouraging Jo and Johan, and I hope they have the motivation to keep the work up.

>
OK, my previous message went down the drain somewhere, so I basically repeat
what it was about:

I found that working with MINTNP.PRG (actually that was a 1.12 version) AND
in Thing's "info menu's" for each application, the flags set at "Global" and
"shared" ticked, it became better workable. This in turn puzzles me, since
Mint is set up now with memory protection disabled, yet I set flags in Thing
for each prg to "Global/shared" and it works better. My testing resulted in
at least Thing behaving quite OK. Dragging went OK, loading thru' Thing went
OK, except for Gemview. Then QED would at least load files thru' the menu
items or by dragging files onto QED's icon. It wouldn't save, though.
Furthermore, while in QED, keystrokes like CTL-O didn't do a thing, but
clicking the menu item worked OK.
OTOH I must say that once in programs, usually somewhere there was a point
where the stuff simply froze up. Newsie would start, but that was about it.
Furthermore, I got XaAES running in 832x624 TC mode, but with the Matrix
drivers and those weren't good enough for all the color widgets. I simply
got the boxes. That's a problem with the Matrix drivers, same thing with

Freedom. Didn't test the NVDI drivers with it, since these are only on my MagiC partition and I'm not gonna fiddle around on that one.
I also said Katherine came back on my experiences and actually said "Forget XaAES" 3 times plus advised to get the latest (Free)Mint kernel.
Anyway, with no word from Craig himself, I decided to put the stuff into the fridge. Now Johan says there's no binary update yet (or is that the xa7tst6 archive? Will check that later on) plus that 0.7 wasn't much of a working version. So maybe I'll retry v. 0.6 (which didn't do much at first, but then I never played with the Thing settings for the individual programs).

Gradually more comments are coming in, like trying to operate XaAES from within the regular AES... (at least, that's what I gathered).

So, in the fridge, out the fridge, I haven't wiped the stuff out so I'll see what I can come up with.

Also, there is a utility (I believe it is on Atari Archive) that
runs on the PC called 'ST2DOS' that rewrites a TOS-formatted boot
sector and fixes some problems with directory structure. This
might prove useful, and interestingly it purports to be able to
do this fix without hurting existing data on the disk.

5401. ATTENTION: Gemar 3.06 destroys older backups

Newsgroup: comp.sys.atari.st
Date: 1998-09-03 00:00:00 UTC
From: Markus Egg <Markus.Egg@vcpc.univie.ac.at>
Message-ID: <35EEAB03.ED0447F4@vcpc.univie.ac.at>
Source record: 94395
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I could already backup my partitions with Gemar 3.06 on a
EXABYTE 8700 using the EXABYTE 8200 *.par.

Today I tried to append another backup at "the end of the tape".
I installed this SPACE plugin.
The whole thing started of as the last time, but after backing up
some files there was suddenly an Error Message.
Something like "Timeout (-8)" and an MSense $FE (0,0) in the top right
(from the controller I guess).

I installed this REQSENSE plugin and restartet.
Again "Timeout (-8)" and then the error message

"... Check condition (DEVICE RESET, ...)"

Why "device reset"?

It was not possible to end Gemar, this dialog appeared again and again- I
had to reboot.

I started GEMAR again and tried to load the indices.
I had to realize that even the old backup was gone.

What was wrong?

My config:
ATARI Mega2->ICD AdSCSI ST-> Seagate ST1480N HD-> Exabyte 8700 + active terminator

Do I need special drivers for the EXA 8700 (meaning that the
8200 driver is not correct)?
If yes: where can I get them?

Any other hints or pointers to backup software?

Thank in advance
ME
P.S.: Please also Cc answers

>looks OK.

It's the drum, I have the same printer and the same problem ... it
seems to be the drum where it is in contact with some other mechanical
piece ... the toner stay on the drum at this place because the
photosensitive coating went away from the drum surface ...

>Has anyone been able to fix this?

Change the drum or clean it with a special liquid ... I can't remember
where I have read about that, but some people were able to clean the
drum and set it to a new life ...

Charlie, I wrote Bill Aycock about three years ago and recieved a nice letter in return. I use CAL myself, but never realized there was a size limit (I have about 300 entries). I know that Bill hasn't done any Atari work for a while -- he might be interested in releasing the source code if you wanted to work on it. Galen (Head YACcer, Yolo Atari Club)

Well, kind of.

16 bit allows 65,000 colors. Your eye can pick out between 250,000 and
1,000,000 colors (depending on who you talk to). 24 bit at 16,000,000 colors
is thus a bit of overkill and I agree that 16 bit looks pretty good, even if
the two images are side by side.

Personally, I'm waiting for 20 bit (human limits) color. Why make life easy
on the computer?

>
Hi Nick,

eerrrmmm, small OS: agreed, lack of bloatware: agreed, making things fast:
ooops.
Rite, in '84 GEM was something amazing, a g-r-a-p-h-i-c-a-l shell to operate
the system, my, you call that a mouse and menu's? Gawd, wasn't it only the
Mac that had such a thing, and the Mac had only 128k of memory and this
Atari-wonder had 512k and there were already plans for a 1 Megabyte machine,
Jeez, what you need that much for? IBM couldn't think such a thing would be
favorable, so they said "Bugger off, Digital Research". Mr. Tramiel said
"Welcome to the show, Mr. DR".
OK, in '85 it was still stunning, but actually both parts of GEM, the VDI
and the AES were clumsy, at least to modern standards. No wonder NVDI got
skyhigh, no wonder we've got N.AES, MagiC, XaAES etc. to replace the whole
bunch. Sometimes, for old programs or test purposes I still run TOS, but
speed isn't its wonder.

On your other question: I recall having visited a Citroen site in Canada one
time because Martin-Eric Racine (believe he was it) had some problems CAB
crashing on it. I used 2.5 with an older CAB.OVL (not 1.2904) and the page
had no problems here. Forgot what it said about OS, but it said the browser
was Modzilla version somuch. It did (as far as I recall) say I used an Atari.

>
> This is presuming such a system would be purchased at a garage or yard
> sale.
>
> Thanks.
>
If you use the YAC auction as a guide:
520ST 2.5 MB with double sided floppy -- $30 - 40 US
1224 Monitor -- $25 - 40 depending on condition
Misc. Hardware (Mice, SS drives, motherboard) -- of value only to Atari
users. I'd put little price tags on them ($5, $10) to use as tidbits
to sweeten the 520 "pot"
Software -- real hard to say. Some bad games and applications are
worthless. The better old stuff (Word Perfect, Secret of Monkey Island,
etc.) have some value.

5414. Falcon Audio CD's

Newsgroup: comp.sys.atari.st
Date: 1998-09-03 00:00:00 UTC
From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <35ee436a.0@d2o29.telia.com>
Source record: 94408

When I used Spin with Magic I could read data CD-ROM's with no problems, Mac, VFAT, all formats I need. The only problem was that Audio CD's wheren't recognized. CD Player wouldn't even communicate with the drive. Then I got ExtenDOS and CD Player can play Audio CD's, not at all well but it tries. BUT, I can't read data CD's no more! And when I start CD Player and press play the first time it seems like it thinks that the CD is ejected and reinserted and I need to press stop (CDP doesn't know it isn't playing even though the counters shows it's stopped), and press play again. After that it happily plays on until I do anything like starting a program.
The CD-ROM drive is a NEC x2. Has anyone experienced similar problems?
Can anyone think of a solution?

Regards, K.Hampf

Many thanks to all of you who have replied !

I never realised after leaving the Atari scene how many more machines were released!

I left the Atari scene some years back, just as the Falcon machines were coming out Now I need to get back into some music programming, I didn't think twice
about using an ST over my PC.

My humble 1040STF served me well. It worked in sweaty / hot / smoky pubs, got carried around, dropped and had a pint of beer spilt on it, yet never once did it let me down during a live performance.

I can barely run an evening with my PC before "something" happens!

Good old Atari and thanks again for all your help!

Regards,

Harvey

>I believe I need new driver software, correct?

Not necessarily - it sounds like your driver believes that there is an
ACSI drive on the Falcon with an ID of 7 - perhaps a clock. Either you
have a jumper set wrongly, or your driver is perhaps misconfigured.

Robert, aren't devices on the ACSI bus recognised as 8 to 15? In that
case his driver seems to be looking for what would otherwise be ID7 on
the ACSI bus - perhaps a clock he may have had in a previous adapter?

There have been suggestions that they have stopped supporting Atari or even closed down altogether. You may find a dealer with a Link2 in stock. Otherwise you may have to make do with a Link97 from Germany - I thing it's Woller. System Solutions in UK have it IIRC. Not sure whether it's compatible with ICD software (unless you have the Pro version I doubt it as the others look for an ICD host adapter) but suitable programs are supplied - or you can use the excellent HDDRIVER (commercial) or CBHD (Shareware).

>motherboard a victim of the Phantom Broken Trace Syndrome?

As it happens with two mice it's unlikely to be a gummed-uo mouse ball.
Does the pointer move when you hold down Alt and use the cursor keys? If
it does then the mouse driver part and keyboard routines are probably
OK. Rather than a broken trace, I would suspect a bad connection at the
plug to the traces - these often go. Try stripping down the board and
resoldering the plug connections.

What's lame about trying to prevent certain software to disappear ?
Most of those companies don't exist anymore or don't have the originals.
So if certain games cannot be bought anymore (new or secondhand) then
you rather see the originals to be left to disappear somewhere ?
Tell me then where to buy those games.

> Anyway, you've hardly bought "most of" the games produced in the 80. A

Great guess. I bought most of the software present there.

Geert

I've been using PhotoLine for about two months now, having used its predecessor, Cranach Studio, for well over three years.

Initially I spent most of my time learning PhotoLine's masking capabilities, how to merge two or more graphics together, and soft shadowing effects. All I can say is that the program is rather brilliant when it comes to these and other functions. I'm to the point now where I'm 'comfortable' with the program, although at times I still revert back to Cranach for some things.

If you have any specific questions, give me a shout and I'll do my best to answer them.

I saw a posting one of the Psion newsgroups a few months ago about a program called Transend. So far it is a collection of TTPs and a couple of prgs for the S5. I don't have the details with me but I will make a note of your e-mail address and try to remember to e-mail you from work tomorrow with a website address. In fact I will note it down in my S5.

I could e-mail you the zip if you want. It will be about 100K when uue or mime encoded. I could even use my S5 to mail it to you.

Rich.

5434. POPwatch Timeout

Newsgroup: comp.sys.atari.st
Date: 1998-09-03 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6skm7q$m0m@enews1.newsguy.com>
Source record: 94472

Question about POPwatch (v. 2.72):

I often am unable to check my e-mail for a few days. And it seems that if I have more than about 7, or if any of them contain any attachments (a friend of mine often sends mail with pictures or AVI movies), POPwatch will always timeout. It says something like "User Timeout expired". Then, I go to NEWSie, and again, if there are too many e-mails, or large e-mails, NEWSie sits for what seems like several minutes before announcing I have "0 messages".

When this happens, my only option is to call my ISP with a term program and login to their "BBS interface" to get my e-mail. If I didn't have this option, I'd never get my e-mail.

I know timeout length can be set in NEWSie (but it still doesn't always help), but how is it changed in POPwatch?

5440. POPGEM 1.9 is out.

Newsgroup: comp.sys.atari.st
Date: 1998-09-03 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.96.980903015549.14761B-100000@usr06.primenet.com>
Source record: 94478

Hi, a new version of POPGEM is out,
(for those again who don't know, it's a GEM POP client, email fetcher
if you want)

What's new in 1.9?
Added many features, more consistent design, able to assign any file
to any addresses into an alias.cfg file, more sounds, avserver used
even more, display the data downloading in bytes, started some code
for SMTPGEM, and has now a timer for auto-check your email, (from 1
min to 60 min), and probably more that I forgot.
Some options are for registered users only. But otherwise unregistered
can already use MANY options without real limitation. Example, they
won't have auto-check, They won't have SMTPGEM.

So far 1 registered user (THANKS Jon), and normally if everything goes
well I should get 3 more people quite soon. (IF everything goes well).

Anyway, It's on my site if you want to check it out.

accelerator

That's cool :)
You should try substation with it, it's actually smooth :)
It doesn't work with all games, but it's worked with most of them I've tried. Of course you won't actually notice any acceleration on some. And the only problem I had with a serious program was Photochrome, the pictures loaded really fast but were a little bit corrupted. Everything else was fine.

> about 120 UKP to spend on it, IIRC in mono mode it's damn near as fast as
a

>
> 2. Would the newest Atari (Is that the Falcon?) run my old 1040STF software
> (STOS and Cubase) or
> would I need to buy them again for a newer machine ?

STOS now runs on Falcon, but needs to be patched. Cubase Score 2.0 will
not run, but Cubase 3.0 and Cubase Audio will.

> 3. Whilst I remember that the 1040ST was THE musicians tool, has it been
> supplanted by a newer Atari ?

Yes, the Falcon which is much better than the ST because it can deal
with Audio and MIDI, and it has an integrate DSP.

You might want to have a look at the Quick FAQ:

Do you mean you bought the rights to distribute the software freely on the net, or are you just another lamer trying to destroy what's left of the Atari community.

Anyway, you've hardly bought "most of" the games produced in the 80. A tiny portion maybe, but not "most".

>
> If not CAB, then is there another browser for the Atari that _does_ support
> JAVA?

No.

Java is just so huge, bloated, and power consuming, that I doubt it will
ever be a viable option on our platform. It is just the opposite of what
TOS is all about: a small OS in ROM, making things fast because of the
lack of bloatware.

Webmasters who make their sites Java-only don't deserve to be
webmasters. The Net is all about connecting all kinds of computers,
using all kinds of clients, to share information. A site on which form
counts more that content is so interesting IMO.

And don't even mention Shockwave.

Cheers,
Nick

It depends on the CAB.OVL and the settings.
When i am using CAB i have it to fake mozilla cause
some servers do not accept other browsers than IE and Netscape.
In this mode CAB is identifies as Mozilla compatible browser
and the server thinks it is Netscape.

I hope this info helps you.

If only I knew then what I know now, Uwe, I would have! "simply order" -
there's an idea for ICD to investigate!

Funny how everyone loves the product but hates the company...
Sounds a lot like a company I used to deal with. A really fucked
up company that used a Fuji for its company logo.

If ICD makes such a great product that everyone wants, why doesn't
one of the remaining retailers pick up the line? Yes, that would
add a few $$$ more to the end price, but being able to _GET_ the
thing ought to be worth that little stipend.

5456. AHDI 6.061 for SH204

Newsgroup: comp.sys.atari.st
Date: 1998-09-04 00:00:00 UTC
From: Ken Kosut <kjcat@execpc.com>
Message-ID: <6sok99$fbu@newsops.execpc.com>
Source record: 94344

Hi,

Earlier I wrote an inquiry to find out the most current
AHDI program that I could use with the following configuration:

TOS 1.4 ---> SH204 20 meg

TOS 2.06 --> Megafile 30 daisy chained to SH204

I stated that I was currently using v3.01.

Slight mistake. That is the version of my boot up driver installed
to the hard disk.

I got all these from a disk called Advanced Hard Disk Utilities.

AHDI, the bootup driver, etc.

Someone responded that AHDI 6.061 is the most current.
Thank you for your reply.

But my question is: What is the latest Advanced Hard Disk Utilites
disk where I can pick up the bootup driver to match AHDI 6.061?

thanks for your help

> don't want to see or god forbid a spinning gif!
>

I'll admit that I'm not an expert in Java or Shockwave programming, but
usually when you add animations and stuff, you have to add graphics too.

One of the worst examples of a website where flashy graphics and
animations get in the way of real content is the french satellite
network TPS (http://www.tps.fr).

<snip>

> I agree good web design should be focused on a multi-platform/multi-bandwidth model
> but I wouldn't like to think an experienced Atarian such as yourself would reject
> new web technologies simply because OUR chosen platform didn't support them?
>

It's not really a matter of OUR platform not supporting the technology,
but more the annoyance of seeing webmasters assuming everyone has PIII
600 and a T1000 line access to the net. Having been on the net for a few
years, I've noticed that although bandwidth and computer horsepower are
always increasing, things don't get much speedier because of all the
flashy effects. Globally the signal to noise ratio had decreased
significantly.

Wow, I talking like an old fart now... and I'm only 27...

The Java VM alone needs 16Mb and Java-apps often need huge amounts of
memory. My Falcon with Afterburner, 36Mb RAM and graphics-card might
just be able to run small Java-apps at a usable speed, but it really
needs atleast 64Mb physical RAM and a much faster CPU. Add to this the
complex work of writing some of the required libraries (esp. AWT) and
you'll realize that it's just not worth it.

> rich10.hel@zetnet.co.uk

Some points of my own:-

1) Second hand dealers frequently charge ridiculous amounts of cash for old software (in my mind even £5 pounds is to much for some software this old, except for classics.)

2) Actually trying to find the stuff you want is pretty much out of the question unless you live in a very large city. In my home town there is one small shop which sells a very small range of atari software at £3 each (which is more of a fair price addmitedly).

3) Shareware software can frequently outclass early ST software
(I would personally recommend Airwar, Ozone, lamatron and well 'ard
to anyone).

4) This person has chosen to protect the atari software he owns from
extinction in his own way, with no net gain for himself. Whatever
is said about the second hand market, atari software WILL disappear
and the pirate archives will be the only way of getting some of the
more obscure or old titles. If you don't like it, don't use them, but don't
flame people who are actually trying to provide a free service on their
webspace.

5) Finally in my opinion citing piracy laws on the Atari for old
non-supported software is rather like using witchcraft laws in
modern day britain (do these still exist actually?). The principle
of driving though a red light is very distant from the argument.

Well from what I've understood, the Java VM libraries take up 8Mb of RAM
on their own. Besides, Java is a dog here on my P200. I wouldn't let it
come close to my STE!

Maybe the new machines have the guts to run it though.

Cheers,
Nick

Not much. You get the studio module IIRC. Basically, the 3.0 will run on
a Falcon too, whereas the 2.0 will not. The dongle is different between
the two.

Bah, it's not worth the money it costs to upgrade unless you have a
Falcon.

Source record: 94352

I think the JAVA/CAB issue is an interesting one for TOS. If it is unlikely that anything less than the new clones could support JAVA and if it is unlikely that anyone is prepared to port it then well ... we've got to do without it!

I am a passionate Atari user but I accept that my beloved STe is 15 year old technology. Face facts our platform will increasingly come a cropper of new software technologies that demand fast processors and large memories. But this is OK!! It's horses for courses as I've said before. An Atari remains an extremley productive tool but if you want to render broadcast quality video, master 32 tracks of digital audio, or even just fiddle with JAVA then think again. I assure you you aint missing much!

What we can do ... a plug-in for CAB that at least recognises all the new formats and (1) prevents a system crash and (2) tells you what you might have had ie-where a shockwave movie should appear CAB could say "Non-TOS file embedded here!" or something, a 160x120 vivo movie would generate a 160x120 pixel message on screen saying "Movie format - not supported by TOS" etc. We can also bully people into adhereing to a multi-bandwidth/multi-platform design model, after all most computers out there in cyberspace are 486s and 680x0 MACs anyway.

Javascript might be a more viable option - Gemscript? - Particularly if it 'emulated' Javascript and was in non-bloatware optimised assembler or something ... ?

Viva Atari,
Jim.

There was a thread a while ago asking for details of the clock cart with a view to writing a new clock setting program, I've seen nothing since however.

ITMT there is a patch program that does some math on the clock's time to make it Y2000, I don't know if it works but others have tested it and pronounced it OK.

Unlikely to be the drum? I'm thinking that the drum would "start" at a different place each time you print IYSWIM. Tricky one.

Anyhow, the manual for my laser says that a line across the printout can be caused by a dirty glass in front of the laser scanner so have a go at cleaning that?

Otherwise your best bet might be to try a laser printer repair shop, the printer is a Mannesmann Tally MT900 series so shouldn't be unfamiliar - but you'll need to take your Atari along with you to demo of course!

Waw, that's cheap !

> *Please* tell me there's a driver for one of these for Linux/68k!

No drivers for Linux for the Asante Mini EN/SC. Well, I didn't find any.
I thought there were drivers available for the Xircom pocket adaptor.
But I'm not sure.

> (I think the best bet is the Avante SCSI adapter, since it's got a DB25
> interface ready-to-go to Atari TT SCSI port, from the looks of it -- The Xircom
> might need the newer "ECP" parallel port spec or whatever, which ST/TTs don't
> support?)

That's also what I think. Only F030 has a bidirectional parallel port.
Only SCSI will work on all Ataris (with host adaptor for the older STs).

One problem before some starts writing drivers it would be better to get
some development information from the producent (ex : SCSI commands to
talk to the ethernet device).
I started a project a few weeks ago to get a SCSI->ethernet adaptor
connected to an Atari. I also contacted Asante a few weeks ago for this
info. I finally got their product manager on the line. Still waiting for
a reply now.
More info about the Atari SCSI->Ethernet project :

Hi there,
I'd like to add some comments to this pirating discussion.

>> >> What's lame about trying to prevent certain software to disappear ?
>
>> >Ok, here we go again. This has been discussed hundreds of times before.
>> >
>> >1) True, these games are no longer sold as new, but most of them are

Yes, and there are many of the old programs that are actually very good and useable. Since they're still distributed the legal way (even if it's often hard to find retailers), why should you steal the programmers' work? Besides, you have copyright laws in almost all countries and they forbid copying software other than for personal backup puposes.

>> >2) Some companies actually try to earn a living by selling new and

Exactly - and the pirate copying is one of the causes why many programmers skipped the Atari platform. On such a small platform, the pirating is a very severe threat to professional programs' survival. Someone has to pay for the programmers' work and a company that sell too few copies of a program that's taken several months (or even years) to develop simply can't pay the programmers' salary if they don't get paid for the licences. When it's a larger market, like for PC's, the pirating is a much smaller threat to the software companies - but it's still illegal and if there were less pirating, they would probably be able to lower the prices instead - but that's another discussion...

>> >3) It's just damn plain illegal. Ok, so nobody cares. But in our society

It's very illegal and in many countries you can end up in jail for distritubing copies.

>> Oi! Nick!....:) what about 4
>
>> 4) Exsisting ATARI Games programmers do not want to compete with a
>> flood of free commercial quality software, When a web surfer is
>> offered the choice to download free commercial software OR
>> Freeware/Shareware to try.. theres a good chance they will pick the
>> former and that harms the developing side of the ATARI Community :(

Still another good argument. The sad part is that even the cheaper alternative, Shareware gets pirated. People bite the hand that feeds them when they copy programs without thinking of what the consequencies might be - developers stop supporting the Atari platform and even Shareware programmers might end their releases of new software since too few pay the registration fee and they might decide that it isn't worth the time they put in developing their programs.

>1) Second hand dealers frequently charge ridiculous amounts of cash for
>old software (in my mind even £5 pounds is to much for some software
>this old, except for classics.)

Is UKP5 expensive for a program you think is so well made that you want to use it? I simply can't see any sort of logic in that. UKP5 is very cheap for ANY software.

>2) Actually trying to find the stuff you want is pretty much out of the
>question unless you live in a very large city. In my home town there
>is one small shop which sells a very small range of atari software at
>£3 each (which is more of a fair price addmitedly).

They've probably bought it from Atari dealers who went out of business, which means they probably paid next to nothing for it. If the Atari retailer had stayed in business because he sold more originals, he would have had a larger stock of different programs and you could have bought all the thing you want from them instead - instead of living like a vulture off others' misery when they've put a lot of work in their business just to realise there's too much pirating to be able to continue running the business...

>3) Shareware software can frequently outclass early ST software
>(I would personally recommend Airwar, Ozone, lamatron and well 'ard
>to anyone).

Yes - but why do so many people make copies of even those cheap Shareware programs? Why don't they even pay the small registration fee, but search for cracks for the Shareware limitations?

>4) This person has chosen to protect the atari software he owns from
>extinction in his own way, with no net gain for himself. Whatever
>is said about the second hand market, atari software WILL disappear

>more obscure or old titles. If you don't like it, don't use them, but don't
>flame people who are actually trying to provide a free service on their
>webspace.

Even if he has no personal gain, it's still both illegal and morally wrong. Besides, it may put other retailers out of business and eventually, there simply won't be ANYWHERE to turn to!

>5) Finally in my opinion citing piracy laws on the Atari for old
>non-supported software is rather like using witchcraft laws in
>modern day britain (do these still exist actually?). The principle
>of driving though a red light is very distant from the argument.

Even though it's non-supported, there is still copyright. If you make a song for instance and a week after it's released you notice that someone else has stolen your song and also sell - or distributes it for free, wouldn't you be discouraged to make more songs then - especially since your goal was to make money from it?

I would say this in the end: If a program is good enough to be used by you, it's also good enough to pay for. Don't complain about software prices when you bought your used Atari machine for almost no money (if you didn't get it for free...). Since the computer was cheap, you have more money to spend on the software you need for it.

5477. Newsie's time-out settings

Newsgroup: comp.sys.atari.st
Date: 1998-09-04 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <904934362.9602.0.rover.c3adfca1@news.demon.nl>
Source record: 94365

Hi, Newsie-users,

well, finally I got Smurf 1.04 from this belgian FTP site. Have been trying it about a week, everytime it quitted after 46 kb, 186 kb or 336 kb. Never managed to get the full 486.884 bytes alltogether.

So, just about an hour or so ago I had one of these rare moments of "clear thinking" and thought about my settings for time-outs.

Since every once in a while postings in the NG create "pauses" at the end of the transmission (they must come from specific Newsreaders, I only don't know which ones), probably due to the lack of maybe one specific character, I set my time-outs to 15 and 8 seconds respectively. Originally they were set to 60 and 30 secs, but to wait everytime around 30 secs for a new msg, heck I don't have a cable connection but pay by the second.

This in turn however created the stupid failure of getting larger files decently in not-so-good FTP connections: after the time-out setting of 8 secs the connection simply broke off.

So beware, for FTP I set both time-outs to 30 secs again and the whole file got in perfect.
What I still don't know is whether these settings become ACTIVE at the moment you set the prefs to it, or just become active after "save settings", quit and restart again (like in e-mail the setting "copy to self" is only active after saving, quitting and restarting...

Just my thoughts on it...

A tiny % is indeed still vailable. Perhaps required somewhere at a rediculous

low price.
Perhaps even sold for the 4th time already; but you're probably right. Those
honest salesman will surely give a % to the programmers. He will be thrilled
finding those people again.
BTW, where did I say people don't have to buy it anymore or where did I
advertise with free software ?
Perhaps I should mirror the entire little Green Desktop, you'll most likely
have a heart attack then.

> 2) Some companies actually try to earn a living by selling new and
> second hand stuff, including games. Take a look at Best Electronics or

Where do I mention new games ? Well, perhaps from some point of view, my 10
year old software sure is an up-to-date Atari Warez site.

> B&C, or Bravo Sierra. This time you are actually harming them. These
> companies already struggle to support our community. When they
> disappear, there will be no more dealer support for the Atari, which

Ok, well then I solemnly ask you:
'would you please save the Atari scene ?'
'Please contact the developers again and try to find a distributor to sell the

software again' !
It's only 10 years ago. And with version 6 or so of a software like 1st word+

it shouldn't be too difficult to find a lot of people exciting to buy this
again.

>
> 3) It's just damn plain illegal. Ok, so nobody cares. But in our society

I removed the files. If this will boost the development and sales of new
Atari software, then I don't want to get in the way.
This way within a few years when more and more original disks and backups get
broken, no copies of those programs will be available to anyone yet. Get a
kick from the screenshots (are they legal ?) and become filled with nostalgia
will be the case then.

Geert

As if the free availability of some old games causes that nobody wants to
write new games again. Didn't know they were THAT good 10 years ago.
And I suppose the availability of version 1.x of some software really
endangeres
version +4 of that same software in some way.
I suppose this says a lot about how the evolved during the last decade.

Current-FAQ-Version: 2.0.39 (Fri, 04 Sep 1998 01:02:57 CDT)

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the version of Linux, a Unix-like operating system distributed
under the terms of the Free Software Foundation's GNU General Public
License, for computers using the Motorola 68020, 68030, 68040 and 68060
CPUs. Current releases support Amiga, Atari and various m68k-based VME
systems from BVM and Motorola; porting efforts are underway to the Apple
Macintosh and various 680x0-based workstations (at present, the HP 9000/300
series, HP/Apollo Domain series, NeXT and Sun 3 series). Efforts to port
Linux/m68k to other 680x0-based systems are also encouraged.

The current, complete FAQ, including information on the specific models of
these computers which are supported, is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (The Netherlands)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html (Germany)

It is also available at mirrors of the Linux/m68k Home Pages; see
http://www.linux-m68k.org/mirrors.html for a current list.

See Section 1 of the FAQ for links to translations of the FAQ to various
printable formats (including PostScript, Adobe PDF and DVI).

The plain text version of the FAQ can also be found at all Linux/m68k FTP
sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en franï¿½ais. On peut le retrouver ï¿½
http://web.cnam.fr/Comp/Atari/Linux68k/Faq/

More information about Linux is available on the Internet at
http://www.linux.org/; the Linux/m68k Home Pages are located at
http://www.linux-m68k.org/ (and several mirrors: see
http://www.linux-m68k.org/mirrors.html).

Related projects include:

Since they're still distributed the legal way (even if it's often hard to find retailers), why should you steal the programmers' work? Besides, you have copyright laws in almost all countries and they forbid copying software other than for personal backup puposes.

If the sales of those old programs are still going on at that large rate then I apologize, files are removed.
However, take a software like Photoshop. You make an illegal copy, use it twice a month to create a gif for you homepage : is this the great piracy ? On the other hand there are companies who use it day in day out for promotions. Suppose they use copies... .
Strictly following the rules, both commit a crime, 'a theft' in some way but to me there's a great difference.

> >> >2) Some companies actually try to earn a living by selling new and
> Exactly - and the pirate copying is one of the causes why many programmers skipped the Atari platform.

What ? You got to be joking. There are ways to protect your software quite well cfr : Starglider 2.
I agree, not always very user friendly.
But it's new to me that Atari has/had the greatest Warez scene. This would have lead to a great spread of Atari software then ?
I believe I heard some rumours warez is/was spread amongst Amiga and PC users too.

> On such a small platform, the pirating is a very severe threat to professional programs' survival. Someone has to pay for the programmers' work and a company that sell too few copies of a program that's taken several months (or even years) to develop simply can't pay the programmers' salary if they don't get paid for the licences.
> When it's a larger market, like for PC's, the pirating is a much smaller threat to the software companies - but it's still illegal and if there were less pirating, they would probably be able to lower the prices instead - but that's another discussion...

Well there's Linux, all for free.

People bite the hand that feeds them when they copy programs without thinking of what the consequencies might be - developers stop supporting the Atari platform and even Shareware programmers might end their releases of new software since too few pay the registration fee and they might decide that it isn't worth the time they put in developing

their programs.

Taking the situation as it is with Atari, there would be more development if people would buy software and pay their fees.
But this will not increase the use of Atari as a computer in general. It would perhaps be if there was an enormous sale (compared to the number of users).
An idea would perhaps be to make development software available for free.
This is the case with gnu c I believe but I don't know how good this is.

And why did the retailer go out of business ?
Because software piracy was going on or merely because Atari Corp screwed it all up back then and stopped their business ?
Power without the price wasn't an empty slogan then !

I agree if I have had distributed other software than those 10yrs old ones.
But ok, start a hunt to track all online images and we'll have an evaluation after one year.
It would be great if Atari soft and hard was sold at a large scale again.
But I suppose you agree, with new processors available, it would be nice to have more power then.

> >5) Finally in my opinion citing piracy laws on the Atari for old

Perhaps I was a little drunk then but I can't remember that I disassembled the software and put my name in it.
It's of course as good as impossible to prove this, but piracy (and I don't want this to be taken as an encouragment) makes that software is spread at a larger scale. Quite a high % of those who like will go and buy it.

> I would say this in the end: If a program is good enough to be used by you, it's also good enough to pay for. Don't complain about software prices when you bought your used Atari machine for almost no money (if you didn't get it for free...). Since the computer was cheap, you have more money to spend on the software you need for it.

I use pc, Mac, Atari (through an emulator now).

iBrowse (from Oregon Research) supports Javascript. It's just about
usable on a 060@50/604PPC@200 Amiga 3000.

Cookies has nothing to do with Javascript. Cookies are nothing but
small pieces of data handled by the overlay. The CAB.OVL for MiNTnet
has supported cookies (on all (or from 2.0?) version of CAB) for ages.

paxton@accrington-web.co.uk wrote:
:
: There isn't that much you can do in JAVA that you can't do in
: Javascript anyway..

Java and javascript are two completely different beasts and should not be compared to each other.

As for Javascript on the ST, I thought that Adamas (the _other_ web browser, you know, the one that isn't CAB but that is still very good) was going to support it.

By the way, I'm sure someone said he'd compiled Java for the Falcon but couldn't release it as he had done the bulk of the work at his job and so it was technically owned by his employer. May have been utter BS for all I know. I think it was Craig Graham, but I could be wrong on that (and I'm not trying to imply anything like a penchant for BS on Craig Graham's part, or anything like that. I just include the name in case anyone wants to try a DejaNews search for the thread I am referring to).

In general, though, I'd suspect Java is way to resource intensive to be worth proting to TOS unless a ton of Milan's are sold, but that Javascript could be made to work on whatever Adamas can run on, given some creative effort on Jens Heitman's part.

Snipped from a WebLight log entry, this is how my copy of Cab/Cab.ovl
identify themselves:

WEBL 'User-Agent' = \
Mozilla/5.9 (compatible; Cab/02.70; Ovl/1.3010; STiK/01.15; Atari)

- From this, cab.ovl identifies itself as a Mozilla/Netscape v4.9 [1]
compatible browser. The real details being Cab v2.7 (demo), Cab.ovl
v1.3010 and STiK v1.15 (it's really STinG), all running on an Atari.

[1] This is usually v2.0 but I altered it to v5.9, just for the hell-of-it
really. I don't think it makes any difference, apart from with those who
collect browser version numbers as part of their log details.

I'd say that the low end machines, from STs to stock Falcons and maybe
even TTs, probably aren't fast enough to do anything usable with Java.
That doesn't mean that Javascript, which is not the same as Java, can't
be supported.

Ibrowse does NOT support JavaScript. The only Amiga browser that supports
Javascript is AWeb 3.1 or higher. And IBrowse isnt from Oregon Research,
they just sold it in N. America. IBrowse is from HiSoft. And they are
both usable on a 25mhz 68030 though a graphics card is recommended.

One of the best adverts for the continuing relevance of the TOS platform that I've ever seen was Photoline on a TT with a NOVA graphics card and a large monitor ... it was brilliant! the other was a well set-up Falcon with a CD writer, live audio straight to CD with no fuss.

Viva Atari,
Jim.

What have you got against Shockwave Nick. I good shockwave programmer will add functionality and interactivity for amusement or practical application to a web site in less than 50k. I'd rather wait for that than a still jpg showing me something I don't want to see or god forbid a spinning gif!

If TOS did support Java, and I imagine the newer clones could, running Shockwave and Flash would be a trivial task as both formats can be exported as standalone Java applets.

I agree good web design should be focused on a multi-platform/multi-bandwidth model but I wouldn't like to think an experienced Atarian such as yourself would reject new web technologies simply because OUR chosen platform didn't support them?

If you go for the Veloce+ you can also have an extra 2 or 4 meg giving
either 6 or 8 meg in total. Add NVDI and it really does fly - I know
I've got it with +2 board. It also comes with TOS 2.06 and the
ability to switch between the normal 68000 or the 68020 in case some
programs don't work on the faster setting.

Trevor

5498. Ethernet for Atari?!

Newsgroup: comp.sys.atari.st
Date: 1998-09-04 00:00:00 UTC
From: Russell Magee <bigruss@cheetah.spots.ab.ca>
Message-ID: <6snd10$15t$1@f02s02.tac.net>
Source record: 94430
Cross-posted to: comp.os.linux.m68k,comp.sys.atari.st

Hi all, possibly great news for Atari/Linux users?

I went to a surplus place in town here, and I found:

approx 15 Avante MINI EN/SC 10T SCSI/Ethernet adapters for $50 each (Cdn)
approx 10 Xircom parallel/10baseT Ethernet adapters for $99 each (Cdn)

Please tell me there's a driver for one of these for Linux/68k!
If not, I'll go temporarily insane and propose the following: whoever on
the (pref. Debian) GNU/Linux 68k dev team would be willing/qualified to
write an Ethernet driver for these, I'll BUY you one and send it to you. 8-)
If anyone on the Debian dev team would take me up on this offer, please
email me. I would like to learn to do Linux drivers myself, but I haven't
done it before, so we'd all be waiting a while..

(I think the best bet is the Avante SCSI adapter, since it's got a DB25
interface ready-to-go to Atari TT SCSI port, from the looks of it -- The Xircom
might need the newer "ECP" parallel port spec or whatever, which ST/TTs don't
support?)

I keep hearing people talking about the scarcity of these adapters; if there's
driver support, or poeple willing to bank on future support, I'll send them
to people who could pay me the price plus nominal shipping (I have a feeling
they won't be selling them off soon, but who knows?)

-Russ

Assuming your serial number is legit, e-mail it to MGI with your request. I think they still have the technology to make one up for you. i visited the MGI HQ in the Summer of 1997 and there was a Falcon and a TT in a back corner, `just in case'

For more on MGI software, see the articles featured in XEST newsletters, the Septembeer and November 1997 issue. Also there are some new Calamus SL98 reviews in the AUNT BYTES newsletter. These Atari club 'zines should be in the EACH archives in Edmonton.

Following for sale or trade: (Prices Negotiable)

NOTE: WILL TRADE ANY OF THE ITEMS ON THIS LIST FOR PC EQUIPMENT-Hardware
and/or Software

Hardware-

ALL hardware is in good to excellent 'used' condition and pre-tested before
shipping.

1040STf's-(still going strong!)1meg-used/tested.....$50ea.
Includes Atari Mouse or Marconi/Marcus 3 button track ball, your choice.

Atari SC1435's -14" stereo RGB monitor, headphone-jack, video cable,
used/tested...$65ea.

Atari SC1224 12" Color Monitor - used/tested..$40.

Atari System: 1040STf + SC1435 + Atari Mouse or Marconi Track Ball-all
items used/tested.......$100.

Atari PCM124 12" Monitors-New-$20 ea. Original box and manual.
Believe these were used on 286 type computers and Atari's short lived
PC. Two units available. 7-Pin video cable.

** LYNX STUFF: **

LYNX II -used but works great except the external speakers do not work.
Need headphones to hear audio. * SOLD *

LYNX Kit Case-Carry Case-NEW
12"wide 9 1/4" tall 4 1/4" deep-$12

LYNX AC Adapter- New -120V 60Hz-$8

LYNX battery pack-holds 6 'D' Cells-excellent shape.-$8

LYNX NAXI Power Pack-rechargeable, includes A/C charging unit.
Used but ni-cad batteries are in good shape, still hold a good
charge. Asking $10.
LYNX Sunshield- $5

*** LYNX GAMES ***
Used but like new
All games have original box and instructions except O.E.M. games listed:

Baseball Heroes...$10
BattleZone 2000...$12
BlockOut.............$10

Blue Lightening.....$15
Hockey.....$10
Joust.....$12
Shanghi.....$12
Steel Talons.....$10
Super Asteroids/Missle Command...$15
Toki.....$10
Warbirds.....$20

O.E.M. Games - full instuctions/no box

Batman Returns...$8
Hard Drivin.....$8
Shadow of the Beast...$8
S.T.U.N. Runner...$8

ST Software: all games are in the box with manuals

Hardball-Accolade-baseball sim-$5
ST Pool-Shelbourne-rack 'em up-$5
Map & Legends-The Cartographer + Data Mao Collection- $10
Gold Rush-Sierra-adventure sim-$5

8 to 15 usually denote the SCSI bus. ACSI is 0 to 7.

> you rather see the originals to be left to disappear somewhere ?
> Tell me then where to buy those games.
>

Ok, here we go again. This has been discussed hundreds of times before.

1) True, these games are no longer sold as new, but most of them are around on the second hand market. So what if I have some of these games for sale, and you come around saying "oh, people, don't buy them, you can get them for free on my homepage". You would be ruining the value of my property. I certainly wouldn't appreciate.

2) Some companies actually try to earn a living by selling new and second hand stuff, including games. Take a look at Best Electronics or B&C, or Bravo Sierra. This time you are actually harming them. These companies already struggle to support our community. When they disappear, there will be no more dealer support for the Atari, which means no more outlets for new products in the "offline" Atari community.

3) It's just damn plain illegal. Ok, so nobody cares. But in our society we have rules and laws. Just because "you won't get caught" doesn't make them irrelevant. When you're driving and you come to a red light, and there are no cops around, you know that "you won't get caught", but do you go through anyway ?

Cheers,
Nick

I have a problem I need help with. My F030 sometimes boots up and forgets the keyboard. Other times it will boot up fine, but then the mouse buttons click on things randomly, and when I click the mouse button it doesn't register for a few seconds (kinda like on a windoze machine). I tried putting a 1040 STe keyboard in and that didn't work. I deleted the desktop.inf file and that didn't work. Finally I turned the keyboard chip around, it got real hot, I turned it back the right way, and my problem went away. Does anyone know what cause the problem, and will it continue. Is it a virus, or a lose chip on the m-board, or a lose connection.

Thanks in advance

>'emulated' Javascript and was in non-bloatware optimised assembler or something

That sounds good. I don't know much about JAVA, and I'm not saying there needs to be a full implementation of it on the Atari (if that were even possible), but I'm sure there must be some way to "deal with it" when it shows up in a web page. Maybe just display the text as it should be and ignore graphics. Surely this can be accomplished?

Is JAVAscript what JAVA-based web pages use? If so, then it would seem that some sort of emulation ("GEMscript" as you suggest) could be created.

Hopefully someone here can explain or answer these questions. My programming days ended back on the Atari 8-bits. I haven't "touched the stuff" since then! ;^\

This principle implies that it is immoral to provide ANYTHING to
anybody that competes with somebody else's product. For instance,
"We should all complain to the Free Software Foundation, because they
undermine the efforts of people to make a living providing compilers
and tools, and anybody who gives away THEIR OWN programs without
charging for them should be ostracized." Think about it. If there
really were a "flood of free commercial quality software" for the
Atari, nobody would give a damn about alienating developers of
commercial software, now would they?

<snip>>
>
>I keep seeing reference to AV_SERVER what is it ?

AV_SERVER is a freeware application by Alexander Barton to add some functions to the MagiC OS and Desk. Here are the introductory paragraphs of AV-Server's doc, translated by RUFTrade:

<<quote>>
1. The desktop MagXDesk that MagiC supported up to version 4 of MagiC no AV-protocol and in version 5 only a few functions. That's why was it under MagiC until inclusive version 5 with MagXDesk as desktop not possible certain programs and/or functions useful to insert. Some functions could too in general not become executed.

My aim was it therefore an external AV-Server for MagiC and MagXDesk to write that it too under this configuration allowed the AV-protocol to use.

I think that I this intention carry out could. Certainly can the AV-Server not the complete protocol build, there AV-Server MagXDesk so further not influence can: so is to the example no global window-exchange with the windows of MagXDesk possible.
<<end quote>>

I hope you are now more enlightened than I am :))

Cheers, Charles.

Ken, I do not think you can get these on disk any more.
AHDI is available online as: ahdi6061.lzh.
You also need: hdx504.lzh.
Try the Belgian site, 193.190.205.13 in atari/incoming/...
or go to Hallavart's launch page or your usual contacts.

If no luck, I would attach email them to you, if you ask (my email
address as given).

Charles.

5520. .mp3 Player for Falcon?

> >
> >2) Actually trying to find the stuff you want is pretty much out of the

> You can't find what you want legally so its ok to steal it ?..
> Hmm strange point of view ?

Frankly, yes. If it is not available by any other means, no one is making
a loss and your argument is pointless moralising.

> >3) Shareware software can frequently outclass early ST software

> You think older software isn't that good so its ok to steal it?
> Hmm strange point of view?

No, this was reffering to the point stating that if commercial software
was going free no one would invest in shareware.

> >4) This person has chosen to protect the atari software he owns from
> >extinction in his own way, with no net gain for himself. Whatever

> You think because no one is profiting then its ok to steal it?
> Hmm strange point of view?

No one is profiting, but no one is making a LOSS either (yeah yeah, second
hand dealers, but they will rip off the people they are buying from anyway).

> >more obscure or old titles. If you don't like it, don't use them, but don't
> >flame people who are actually trying to provide a free service on their
> >webspace.

> I added a valid reason to a list of why not to offer pirated software,
> and you call that a flame ?..
> Hmm strange point of view?

Okay, valid point I was talking generally not specifically.

> >5) Finally in my opinion citing piracy laws on the Atari for old
> >non-supported software is rather like using witchcraft laws in

> Hmmm strange point of view..

Can you actually give a reason rather then just sarcasm?

Your arguments seem to mostly consist around morallising. Ok its technically illegal, but circumstance makes it justifiable. I would be intrested to here your REAL arguments....

Tom Hayward

The F030 isn't the only machine with a bidirectional parallel port. My STE
has and my old FM had as well. How do I know? I've still got the old sound
sampler cartridge that plugged into it. What the ST parallel port doesn't
have are all the extra control lines that would be required to use things
that plug into it. Pity really as a parallel port scanner is much cheaper
than the SCSI version :(

CGI-scripts on the server-side, CAB.OVL handles them on the client
(CAB) side. If you're familiar with C you can download Howard Chu's
CAB.OVL for MiNTnet and check the source to see how it works.

> On the PC javascript is used to read and write cookies so how can you
> say they have NOTHING to do with each other... ATARI may be able to

> there...How can you say it has NOTHING to do with them ?..

You can use Javascript to modify/handle cookies on the client-side,
but that doesn't mean that cookies and javascript depends on each
other, or even has nothing to do with each other. Cookies works fine
without javascript, javascript works fine without cookies. Cookies are
just a way of maintaining some sort of status between the client and
server.

Correct, it's Craig Graham. And he's not the only one who has ported
Java, Axel Kaiser has ported Kaffe, and I've compiled Kaffe myself a
few months ago with some success (it worked, but not without
problems). The main problem isn't to port the Java VM itself, but all
the required libraries. E.g. you can't do anything useful without AWT,
and AWT is a complex beast that must be written from scratch to work
with GEM. This is why I never spent any time on getting Kaffe to run
properly, there's nothing I can do with it ;-)

> In general, though, I'd suspect Java is way to resource intensive to be
> worth proting to TOS unless a ton of Milan's are sold, but that Javascript

Java is too heavy for the Milan as well, although a 060-Milan *could*
be usable. But everybody who has used Java on powerful PC's knows that
Java and Java-apps needs really powerful machines.

Javascript could work, but I don't know of any free implementations of
javascript so it must be written from scratch.

If you can't create CGI-scripts you can't use cookies either. Somehow
the server must send cookies to the client, and since javascript works
at the client-side...

You can use javascript to handle cookies *sent to you*, and send
cookies back to the server, but without access to cgi-scripts (or a
server which handles them through HTML) you can't send any cookies to
the clients.

paxton@zetnet.co.uk wrote:

>>If you can't create CGI-scripts you can't use cookies either. Somehow

I should have been clearer on this, you can't use cookies *as
intended* if you can't use cgi-scripts (or, as I wrote later, if you
don't use a server that handles cookies by itself).

>>the server must send cookies to the client, and since javascript works
>>at the client-side...

> arrrrgh....what are you on about?..
> You can use javascript with NO calling of cgi...

What are you on about? I have never said anything about javascript
being dependant on cgi (or the other way around).

> I make a web page
> I want to greet you
> I ask for your name
> You type your name
> I use javascript to save that name to a cookie and send it to your HD

> Everytime you visit my web page, I get that cookie from your HD, read
> your name and print HELLO NAME on the web page

This is one way to use cookies, although it's not as intended. Cookies
is a workaround for the fact that HTTP is a stateless protocol, and
sometimes you need to preserve some kind of state. For this you need
to handle them on both sides of the connection.

> Javascript code... I do NOT call any cgi, I do not create any cgi, I
> do not mention , know or even understand cgi... But I know my
> javascript and I know I as the page author does not need any knowledge
> of cgi... phew!

> You do NOT need any knowledge of cgi to create, save and load cookies

> YOU LOSE! :)))

Your original statement was that CAB's (or rather CAB.OVL) handling of
cookies was a step on the way for javascript-compatibility. This is
pure c**p, javascript has nothing to do with cookies. Nothing. Still
you're insisting on this, and since it's obviously futile to tell you
otherwise I give up. So you win ;-)

As the Alternate key is detected by the HD driver - not TOS - , and the HD driver
is booted *after* drive A has been checked, you'd release the key too early.

It really depends on where you are. In UK, for every SM124 (monochrome)
Atari sold three SM1224 (colour) so the latter is probably cheaper there.
In Germany, SM124 was sold 10 times more often than the SM1224, so the
latter is a somewhat precious thing to have.

You're probably after an Archie client. I'd guess there is one for MiNTnet,
but not for any other TCP/IP stack for Ataris, including STinG. Both Gary
Priest and I once considered writing one, but the Prospero file system which
it is based upon is not very well documented (at least it appeared so), so
we both went on with other stuff.

No that's wrong. All STs have a bidirectional parallel port. The difference
to PC parallel ports is that some lines are missing.

> One problem before some starts writing drivers it would be better to get
> some development information from the producent (ex : SCSI commands to
> talk to the ethernet device).

Indeed that's the main part of the game. You can do a lot if you got detailed
info but no device for testing, but you can do nothing the other way round.

Trevo
r,

I have found that CAB.OVL 1.3011 works best.

In addition, I use it with:

Geneva 1.06
NeoDesk 4.05
STalker's AUXINIT.PRG (set to 24 bit)
Peter Rottengatter's STiK control panel beta (Not STiNG)
a Cyrel, Sunrise graphics card set to 8 bit mode.
a Zyxel Elite 2864 modem

Trevor,

Go to Dan Ackerman's web page and get the latest CAB.OVL (ver.1.0311b).
Supports "cookies" and has been consistently updated.

Yes for MiNTnet there is one.
I guess he can also use Telnet.prg with StinG to reach a public archie server
like:
archie.th-darmstadt.de
archie.doc.ic.ak.uk

Following for sale or trade: (Prices Negotiable)

NOTE: WILL TRADE ANY OF THE ITEMS ON THIS LIST FOR "CURRENT" PC
EQUIPMENT-Hardware
and/or Software

Hardware-

ALL hardware is in good to excellent 'used' condition and pre-tested before
shipping.

1040STf's-(still going strong!)1meg-used/tested.....$50ea.
Includes Atari Mouse or Marconi/Marcus 3 button track ball, your choice.

Atari SC1435's -14" stereo RGB monitor, headphone-jack, video cable,
used/tested...$60ea.

Atari SC1224 12" Color Monitor - used/tested..$40.

Atari System: 1040STf + SC1435 + Atari Mouse or Marconi Track Ball-all
items used/tested.......$90.

Atari PCM124 12" Monitors-New-$20 ea. Original box and manual.
Believe these were used on 286 type computers and Atari's short lived
PC. Two units available. 7-Pin video cable.

** LYNX STUFF **

LYNX Kit Case-Carry Case-NEW
12"wide 9 1/4" tall 4 1/4" deep-$12

LYNX AC Adapter- New -120V 60Hz-$8

LYNX battery pack-holds 6 'D' Cells-excellent shape.-$8

LYNX NAXI Power Pack-rechargeable, includes A/C charging unit.
Used but ni-cad batteries are in good shape, still hold a good
charge. Asking $10.
LYNX Sunshield- $5

*** LYNX GAMES ***
Used but like new
All games have original box and instructions except O.E.M. games listed:

Baseball Heroes...$10
BattleZone 2000...$12
BlockOut.............$10
Blue Lightening.....$15
Hockey.................$10

Joust.....$12
Shanghi.....$12
Steel Talons.....$10
Super Asteroids/Missle Command...$15
Toki.....$10
Warbirds.....$20

O.E.M. Games - full instuctions/no box

Batman Returns...$8
Hard Drivin.....$8
Shadow of the Beast...$8
S.T.U.N. Runner...$8

ST Software: all games are in the box with manuals

Hardball-Accolade-baseball sim-$5
ST Pool-Shelbourne-rack 'em up-$5
Map & Legends-The Cartographer + Data Mao Collection- $10
Gold Rush-Sierra-adventure sim-$5
Flight Simulator II-Sublogic-with Scenery Disk #7-$10
RISK-Virgin-Word conquest game-$5
Their Finest Hour-Lucus Films-The Battle Of Britain-air combat sim-$5
SCRABBLE-Leisure Genius-crossword game-$5
EZ Test Writer-$5
DragonScape-adventure game-$5
Metro Cross-Epyx-scrolling skateboard game-$5
Data Diet-Disk compression program-$5
StarGlider-Firebird-3D combat-air to air/air to ground sim-$5
Final Assault-EPYX-mountain climbing adventure-$5
Transputor-cool 3D marble action game-$5
LED Storm-Road race with lazers-$5
Crash Garrett-1938 adventure game in FRENCH-$5
Championship Wrestling-Epyx-Wrestling Mania for the ST-$5
Phantasm-space shoot-em up-$5
Project Neptune-Epyx-James Bond type adventure-$5
Renegade-Taito-street fighting-cool game-$5
Prime Time-make your own TV shows-$5

Following-no box OR doc's

Warship-Stratigic Simulatons-$2
Read & Rhyme-Unicorn-$2
Math Wizard-Unicorn-$2
The American Pastime Baseball Simulator v3.01-$2

That's All For Now.....

5557. Queastion about Mega ST4 from the Atari Challenged :)

Newsgroup: comp.sys.atari.st
Date: 1998-09-07 00:00:00 UTC
From: Marstech <marstech@sprynet.com>
Message-ID: <35F46134.4F5A4AE5@sprynet.com>
Source record: 94249

I just picked up a Mega ST4... Got a great deal, but it's not quite complete, and being fairly clueless about this series of computers I had a few questioned I hoped someone might be able to help me with.

I need to get a keyboard... I found a site that sells them... at $150. Does that sound right?... and are there lower cost versions?

I don't see the mouse/joystick ports on the system unit, From the one pic I've found it looks like the ports are on the keyboard?

I've seen PC keyboard adapters for the Mega, but not much details. Any preferences? anybody know if these adapters are just the keyboard, or (if the mouse/joystick ports on the keyboard) do any support the mouse as well?

Any help would be greatly appreciated!

Thanks!
=== John ===

Source record: 94323

G'day, could someone PLEEEEESSSSSSEEEEE write a utility to limit the Memory on the Falcon.I have 14meg and some of my ST software(which worked fine under 4meg) is not functioning properly. What I would like to se is a Falcon version of Ram limiter for the ST. It was an auto folder Prog. that allowed you to set the limits on the amount of memory your machine has, 512k, 1meg,2meg etc. I hate having to use backward every time I want to use the spell checker in wordwriter (yes I know its old). Thank you.

Mark Bedingfield

Source record: 94327

Just thought I'd get involved in this Java AND OR JavaScript debate thingie.

Java itself is like running a separate OS inside your current OS. It'll be tricky and I wouldn't try to make it there really yet. But there might be limited Java "kernels" that are slimmed down or optimized, suggest we try to keep our eyes open, especially take a look at the palmtop-computer scene.

JavaScript should be a lesser problem. We need a FULL description of the JavaScript standard (if it is a standard ;), most thing's aren't) i.e. all commands, references and default values. Then we also need a FULL description of CAB module building. Is it possible to totally interact with the screen from a module? Similar to how animated GIF's work? THEN we just code, drink coffee, smoke and code.

If I'd like to do it? Yep
If I'm going to? Nope, I have to earn for a living, and I think this project might be tricky in that way. And I can't get MagiC/NVDI/CAB stable anyway, 4Mb RAM seems to be nothing theese days.

Hi Atari Lovers,

I've owned Ataris for years, but have had to buy a PC to go where the software and future is. Rather than lose all of my precious Atari goodies I was wondering if anyone can recommend a good Atari ST(E) emulator for the PC on either Win95 or LINUX (with the X Window server). Is there one that I can download from somewhere?

Thanks everyone.
Rob.

Take your pick - the best one for playing games is Pacifist for
Windows/DOS, and others include TOSBOX for more GEM based stuff. For
Linux, I think the only usable one is STonX, which is included in some
Linux distributions such as Suse 5.2 on this month's PC Plus disk.

5569. Re: Atari soft for download

Newsgroup: comp.sys.atari.st
Date: 1998-09-07 00:00:00 UTC
From: "meva.tele" <meva.tele@virgin.net>
Message-ID: <35F3F01E.1955@virgin.net>
Source record: 94333

I have owned ST's for about 10 years. I still own ST's although they
don't get used as much as they used to, and I sell ST software.
Why do I sell ST software ? I think its because I like the ST so much I
don't want to see it die off completely.

In answer to some of your points below.
1)I charge from ï¿½2 a title. If Atari users want the ST scene to keep
going they have to pay. It takes alot of time and money to run what is
essentially a hobby.
2)I live in a small village, have a range of 800 titles and advertise
the software on the Net and in MicroMart.
3)You still have to pay for shareware.
4)Pirate software .... its great if you own the original. You get the
program on one disk, can run it from a hard drive and on emulators and
don't have to mess around with passwords etc.
5)Piracy, only affects Microsoft these days ....???!!!

Cheers
John Whatty

Well, bloody hell, my Atari-IRC simply crashes when I try to log on...
whether on MagiC, TOS, on the card or in bloody-old TT-med. Last time I used
it was with the very first IRC session with Milan, and then it worked fine.
Got no idea what's going on, but AFAIK nothing changed in my set up since...

```
BTW: it crashes too when I save configs: config's saved, next it crashes.
Under MagiC I return to Thing, in TOS the system freezes.

Did I miss much important stuff???

You can however use archie via a WWW gateway (a bit dodgy with CAB due to
forms problems unless they are now fixed) or telnet (no problem at all with
a basic telnet client, eg Telstar, TVT102).

A couple of addresses to start you off:

WWW
~~~
Archieplex form at Sunsite Northern Europe:
http://sunsite.doc.ic.ac.uk/archieplexform.html

Oldenburg archie gateway:
http://marvin.physik.uni-oldenburg.de/Docs/net-serv/archie-gate.html

Telnet

> every time I want to use the spell checker in wordwriter (yes I know
its
> old). Thank you.

Thereï¿½s a program called 'Backward' which ï¿½emulatesï¿½ a ST or STE machine
on a Falcon. Some other features are:

```
-----------------------
IV) BACKWARDS OPTIONS :
-----------------------
```

This dialog box allows you to alter the FALCON set up. Feel free
to
try as many configuration as you want when attempting to run a programm.

Each option will now be explained with advice to know when it
have
to be selected.

- 68030 Frequency : This option allows you to slow down the
microprocessor
down to 8 Mhz. It should be use when games run too fast,
or
for some disk protections that refuse to run.
NOTE : this option has little effect on compatibility,
so
keep your 68030 at 16 Mhz and enjoy light speed !

- Blitter Frequency : This option allows you to alter Blitter Frequency.
I
don't think it changes anything for compatibility, but
it
offers you another way to slow down your computer.

- Instruction Cache : With this option you can turn Instruction Cache
off.
This a great incompatibility cause for demos and disk
protection. But it seems that some FALCON TOS turn this
cache on whatever you do !

- Speaker : With this you can turn the internal speaker on/off
(I must admit I have decided to unplugged it).

- Ram Size : I don't think you'll need a lot of explaination for this
one.

- DMA sound interrupt : This should select Timer A pin or MFP input port
7 pin
for sound interrupt.If you haven't any sound with a
program
or the sound begin then stop, try alter this option.

- Bus error : This is the most important option I think. Due to hardware
differences beteween ST and FALCON, access to the ST
sound processor (YM 2149) may cause Bus error. So you
can :
- Left : don't do anything when it happens.
- Corr. : this is the best handling mode so far.
When it's selected, Backward will attempt to
modify programs which cause errors. May doesn't
work
with some programs.
- Simul. : correct the access to the YM2149, the
middle choice but it slows everything down a
bit.
If your programm cause a bus error (two bombs!), it's
may
be because of the YM2149 access. So try the Corr.
choice.
If it still crashes, select Simul.

- Advanced Options : This one let you access to another panel which
offer
more options. You don't have to use them in normal case.
They are :
- Move Exception Table : Normally on. Moving
exception table prevents programs to disable my own
error-handling routines, but it slows down the computer
a little bit. If your program seems not to like it
(very bugged sounds, flashing colors...) turn it off.
- Emulate Line F calls : let my routine
emulate some Line F calls. Use it when the programm show
11 bombs.
- Move Pmmu's Tree : Well there is absolutly no
reason for you to turn it off. Try it as a last
solution.
- Emulate St Ram Bug : Accessing a memory space

where nothing was connected (no RAM, no chips' register)
had no effect on a ST. It's no longer the case. Use it
when your programm doesn't work. WARNING : Simul.,
correc.
YM access won't work anymore with this option turned on,
YM access will be skipped (it means disturbed
digisound).
- Data Cache : Normaly on, turn it off as a last
solution (effects of Data Cache are uneasy to see).
- Old screen address : Normally turned on, it
moves the screen base to improve compatibility. No
reason
to change it.

The last options will be implemented in the future, so are *not*
useable.

If you donï¿½t find this program on the net, feel free to contact me
again. Iï¿½ll send you a copy via email.

>no idea where I could flip the dipswitches? - couldya help me there? :-)
>...it hasn't caused a problem or shown up before up to this point...hmm...

I think you may have an incorrect INF or configuration file in use from
the time the SCSI drive was on the bus. Whichever driver you are running
should have an associated utility program that scans for the actual
devices on the busses and writes them to the driver - certainly with
ICD, CBHD and HDDRIVER, probably with all others too.

I dunno, a linux port might be more productive.
It would be interesting to see what they could
do with a more efficient Mac/PC OS with infinite
customizability

Then many platforms, one sourcetree, one command
to build them all... make.

Or... MagiC on top of posix could be interesting...
Have the same sourcetree but just with GEM instead.
(X is horribly bloated)

Yes and no... I have a Trackball that I know is ST mouse compatible, but
no mouse (another purchase to I need to make...) Does The Mega use the
same type mouse? (I hope! :)

> >
> > I've seen PC keyboard adapters for the Mega, but not much details. Any

Makes sense... What good is it to be able to use a PC keyboard if you
have to give up the mouse! I've seen several the "keyboard adapters"
listed on one sale site (again with no details... Arg! :) at between
about $25-$35... Definitely a cheapie solution... But your right, you
get what you pay for. (well, almost always:) I once got bought a
El-cheapo $20 programmable automatic fax,voice,modem switch from this on
little computer shop... I quickly discovered that it worked best with
the power off (beware of low cost high-tech with "made in China" on it!
:) I know there are variations, some work with the 96 key pc keyboards,
others with the 101's... *sigh* it's never simple is it :)

> The mega keyboard is still the best option. They have a nice touch, and
> the layout is a bit different from PC ones.

Hmmm... I know the pain of using "adapted" keyboards.... and I always
prefer to use system specific (PC on PC, Mac on Mac, Etc.) whenever
possible; far fewer problems that way. What are the biggest
differences? If they're similar to the keyboards on 520's and 1040's
(Forgive me if I'm WAY off on this one... When it comes Atari I'm
clueless so I'm making some BIG assumptions :), at least as far as the
general count and function, is seems to me that there should be enough
similar keys (for sure with a 101) to match the ST... but again, never

having never seen the Mega's keyboard I may just be missing something
obvious.

It was just recently pointed out to me that without JAVA, you cannot
have secure websites for doing business on the web. Apparently, HTML
does not support the encryption necessary to protect your credit card
number, for instance, as it travels from you to the vendor when buying
a product.

If replying, please note that this has been cross-posted.

I just thought that people might be interested in the following
exchange (Mr. Nono van den Hoek Ostende did not authorize my passing
this on):

==========

To: support@extreme-dm.com
From: tross3@hamtel.tds.net (Terry & Karen Ross)

[some snipped]

Another thing, is there any possibility that the next time you
modify your CGI scripts that you have them recognize Atari computers?
There are a number of browsers available for the Atari platform, and
they all send the appropriate information, but being such a small
segment of the market, no one has bothered to include recognition.

>

Right, you won't go far without a keyboard. Since you're speaking $, I
suppose you're in the USA. You need to try Best Electronics in San Jose
or B&C somputervision or Bravo Sierra. They all have websites, so a
quick web search should find them for you.

> I don't see the mouse/joystick ports on the system unit, From the one
> pic I've found it looks like the ports are on the keyboard?

Yep the ports are on the Mega Keyboard. Have you got the mouse ?

>
> I've seen PC keyboard adapters for the Mega, but not much details. Any
> preferences? anybody know if these adapters are just the keyboard, or
> (if the mouse/joystick ports on the keyboard) do any support the mouse

They should do both, because of the way they are connected. Pretty
expensive though, but you can get quality keyboards for cheap.

The mega keyboard is still the best option. They have a nice touch, and
the layout is a bit different from PC ones.

Cheers,
Nick

5591. Falcon Project Inquiry

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: grovem@ridgecrest.ca.us
Message-ID: <6t2ndm$102$1@ash.ridgecrest.ca.us>
Source record: 94258

Hi Falconites,

I dreamed up a small interface for the Falcon this weekend that I call the Ferrit. I intend to mount the following video connectors on a small card: 15 pin VGA,9 pin VGA (with a switch to allow for multisync monitors), 13 pin "Atari monitor connector", SVHS out (by adding an RGB encoder), composite out, an oscillator for external video clock and an oscillator for external DSP clock in @ 44.1Mhz.
This device should be able to mount into a standard Falcon case with some trimming of the tray and lid. It would elimated the additional length that standard adapters add to the rear of the machine.
I plan to have the PCB manufactured in some quanity, and that is why I ask here how many would be intrested in a unit like this. After that I could quote a final price. There will be only one run, so when you see them for sale, get them. You would be responsible for software such as Videlity or Audio applications that accept an external DSP clock.

Anyway, feedback is welcome.

There will also be brackets for mounting to a Wizztronics Rack and C-Lab Mark X case providing your not using the room where the device would go. It could also be mounted in an external box.
Thanks.
Mike

ST software for sale, over 800 titles !

This isn't a clearout, but an ongoing hobby/business to provide
original, boxed ST software to the masses.

Check out the lists on the page below.

Cheers

This isn't true. Of course, you may use Java for that, but using https (HTTP over SSL, where SSL is "Secure Sockets Layer") also provides security / privacy, without the need for special programming languages. Of course, both the server and the browser must support https, but at least the cab.ovl for MiNT-net has this. And https doesn't need far as much computing power Java would require, and it's even more flexible because the webadmin can just design his pages and CGIs the way he's used to.

One problem with https is that due to the export restrictions of the US, servers and browsers are limited to 40 bit keys, which is not secure at all. Fortunately, products made outside the US don't suffer from this (for example the free server Apache-SSL), and there's even a patch for Netscape's browsers to remove this restriction (www.fortify.net).

I don't know about the cab.ovl, but AFAIR it was made using the SSL-eay library which also supports "high grade" encryption, i.e. 128 bit keys.

If you have an SSL-capable browser/cab.ovl, you might check out https://mozilla-crypto.ssleay.org/cryptocheck.php to see if it works and get information about your secret key length.

Ciao

Thomas

> Does that sound right?... and are there lower cost versions?

That's the retail price of the Mega/MegaSTe/TT030 keyboards (all are completely interchangeable). I still have a NEW MegaSTe/TT030 keyboard in stock which I'm trying to close out, so you can have it for $75 plus shipping, if you're interested.

> I don't see the mouse/joystick ports on the system unit, From the one
> pic I've found it looks like the ports are on the keyboard?

Yes, the mouse and joystick ports are indeed on the keyboard.

> I've seen PC keyboard adapters for the Mega, but not much details. Any
> preferences? anybody know if these adapters are just the keyboard, or
> (if the mouse/joystick ports on the keyboard) do any support the mouse
> as well?

The keyboard layouts of the Atari and PC Clone keyboards are different, so the adapters require you to use various key combinations to simulate the missing Atari-specific keys. Personally, I've always preferred the Atari keyboards.

I'm using the latest beta v1.3011 with no troubles. Dan keeps the
latest 'general release' at his site as well - I believe this is
v1.2904.

> a product.

Nonsense.

There are four different things being mixed up together here:

Java
Java is a language, which is designed to be run in a "virtual machine"
environment: you don't need a WWW browser to run Java, just a JVM.
JVMs exist for the "bigger" Ataris, although I'm not yet in a position
to comment on their usefulness.

JavaScript (alias LiveScript, aka JScript, ECMAscript)
This is a language (or rather: these are languages) for programming the
behaviour of a WWW browser.

Cookies
Cookies are an HTTP feature by means of which a WWW server can "feed" a
string of information to a browser, and have the browser regurgitate that
string every time it sends a request to that server.

HTTPS (secure HTTP)
The mechanism used to make HTTP transactions secure. Involves the usual
song&dance re: US export restrictions, patents, etc..

So for example lynx supports cookies (but not across sessions), but not
JavaScript; there is also a free patch to lynx which enables secure HTTP,
but iy can't be distributed with lynx because the lynx license prohibits
restrictions on distribution. As far as CAB is concerned, JavaScript
would have to be built into CAB itself but Cookies and secure HTTP are
matters for the OVL. And Java would only require the existence of a
JVM and a way to start it up.

Unfortunately, now I can't use the Showstats site at all. In previous versions (except 1.3003, which worked perfectly with Showstats), it would simply load the old page from the cache, but I could get the new page by doing a ^L. However, with the last two versions, I can't get my stats at all. I get an error message from Showstats.

If you want to check it out, go to my page below and click on the graph icon in the lower left hand corner.

5604. FT: Atari Falcon030 w/ 1435 Stereo Monitor

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: Roagie <roagie@hotmail.com>
Message-ID: <6t3hqpjt1@oak.prod.itd.earthlink.net>
Source record: 94271
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,rec.games.video.classic

Excellent condition Falcon for sale/trade. Comes with the 1435 monitor and homemade video cable. 4 megs RAM and 100 meg internal HD. Original sowftware too. Beetle mouse included (best aftermarket mouse).

Someone made a mod to the unit as there is a small hole cut into the casing of the falcon directly to the left of the floppy. I don't know what was done. Otherwise unit is mint, plastic cover still protecting "Falcon030" logo.

Everything fully tested and works great!

I sold my other falcon for $500 on ebay (that was w/o monitor, too) so make any cash offers in that range, otherwise let's talk trade ;)

I collect everything classic games related... yes, EVERYTHING!!! (especially handhelds).

Thanks,
Roagie

Just like ActiveX ... ;>

True; and for a JVM to be useful in a WWW environment one would need a whole
lot of class libraries. But the fact remains that Java itself is independent
of JS, cookies, HTTPS, etc..

Jack Berg Sales was an Atari Distributor in the 1980's and has discovered a lot of unsold merchandise from that era.

First come first served They're going fast. Very Limited.

Many other Coleco, Atari, and Intellivision.

Call if interested (915) 532-4519 or email order and it will be shipped on Monday.

No consoles but a lot of Intellivision games in Brand New Condition - Never opened never played:

Imagic: Activision
Coleco

Dracula Pitfall
Lady Bug
Ice Trek
Donkey Kong
Demon Attack Beamrider Carnival
Atlantis The Dreadnaught Factor Mouse Trap
Swords and Serpents Worm Whomper
Dragonfire Happy Trails
Stampede

These are all $ 12.00
All Brand New. Many Atari and Coleco titles as well.

Much Coleco, Activision, Parker Brothers and Arcadia Starpath (Superchargers and Carts) for Atari 2600 and Coleco for Colecovision.

Call if interested. (915) 532-4519We have the following titles NEW in the box for Colecovision:
Never opened - Never Played
Most for $12.00
Activision for Colecovision: Coleco for Colecovision:

Beamrider $ 12 Donkey Kong Jr. Black
Jack
Pitfall 12 Donkey Kong
Mouse Trap
River Raid 12 Looping
Gorf
Zaxxon
Cosmic Avenger
Pepper II

Space Fury
Venture
Lady Bug
Carnival

We also have the Coleco:
Turbo w/adapter
Atari 2600 Adapter for Colecovision

For Atari 2600:
Never Opened - Never Played

Parker Brothers: Coleco for Atari 2600:

Sky Skipper Zaxxon
Reactor Mouse Trap
Amidar Smurf: Rescue from
Gargamels Castle
Star Wars: Jedi Arena
Star Wars: The Empire Strikes Back
Strawberry Shortcake
Spiderman
G I Joe

Arcadia (Starpath) : Atari for Atari
2600

Supercharger w/ Phaser Patrol $ 20 Defender
Communist Mutants from Space 15 Asteroids
Fireball 15 ET - The
Extraterrestrial
Suicide Mission 15 Star Raiders w/touchpad
Escape from the Mindmaster 15 Bridge (1)
Dragonstomper 15
Killer Satellites 15

Activision for 2600:

Kaboom

There are also some joysticks and extension cables for Atari and some
promotional items such as ATARI T-shirts ($18) and Ms. Pac Man dolls ($ 8.).

Please call if interested.

Well, since my original version CUBASE 3.1 haven t let me down a single time
for many a years,
I know that it ain t my Atari. The Score program have this weird abbillity
to leave markers on the screen
when you move the L/R locators, but most of all; IT CRACS!!! (internal
error). It s NOT a cracked version,
but the fact that my dealer sendt me the program ON A HD DISC(1.44), could
be the bug. They hav nt got
a version on a dd disc(witch are the ones that the Atari prefers); in fact,
they hav nt got any left at all!!!!!!.
THATS why I turn to this list in hope for a selution. Are there any?

```

5611. Atari Falcon Emulators

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: Rob Fone <foner@thefree.net>
Message-ID: <35f580e4.0@news.thefree.net>
Source record: 94278

Hi,

First I'd like to thank everyone that responded to my last message regarding Atari ST Emulators. I have now got a working setup of PacifiST which is providing a great deal of fun being able to run my ST software and games once more.

This time I'm after an emulator to make my PC think its a falcon - again preferably a software download. Does one exist? If so where can I get it? I really want to be able to use the extended video modes provided as well as the extra power of the Falcon. If not, maybe there is an emulator of the Mega STE or one of the newer 680x0 Atari compatible machines?

Thanks in advance,
Rob.

Yea, it's not that big of thing, but would save a little space in the back. I wanted to mount my Expose splitter inside my Rack case, and got the idea then. The external video clock isn't really necessary unless someone is running a Falcon at standard bus speed. The DSP clock would work nice with ExtenDOS's CD Writer and would save time converting with 525 for us non-Cubase users. I figured S-VHS out would be a nice feature. There was an S-VHS converter for the Falcon from Parx, but alas.......

Mike

5613. Misc ST Items FS

Newsgroup: comp.sys.atari.st

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
440-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Atari CDAR504 CD-ROM Drive.
This is probably the first CD-ROM drive made for a home computer
system made in 1987!
Unit connects to the ST via built in DMA connector.
Also has normal Stereo jacks so the unit can also
be used as a regular stereo audio CD-ROM drive.
Also has a removable remote control from the face plate
of the unit if used as a Stereo CD player to start, stop,
and select the audio track number. Comes with DMA cable,
power cable, batteries for remote, and a METATOS diskette
to allow ST CD-ROM access. EXTENDOS also works very well.
Own a piece of history for $200

Atari STacy2 portable ST computer.
2 Meg RAM and 20 Meg internal hard drive
ICD Adspeed 16mhz CPU upgrade. Switchable between 8/16mhz
640x400 mono screen that is in good shape
720k internal floppy drive
Only real blemish is the "3" key is fussy at times
Ports for external mono and color monitors, MIDI, mouse, ASCI, serial,
parallel, and floppy drive
Comes with power supply and power cable
Asking $350 shipped anywhere continental USA.

Falcon Speed by Sack Electronic
Intel 286-16mhz IBM processor board for the Atari Falcon computer
Run DOS and Windows 3.1 programs on your Falcon
Norton SI Factor of 12
Sound Support
Up to 8 Meg of IBM RAM
VGA and SVGA video modes 640x480, 800x600, and 1024x768 under Windows 3.1
Switch back and forth between TOS and DOS modes $100.00

Syquest 5 1/4" 44 meg removeable cartridges. Will be HDX formated and
verified good. each $15.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $50.00

Atari SM124 Mono Monitor. Unit is in perfect working order.
Comes with power cable. $40.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $50.00

Supra 2400 baud external modem. No power supply. $3.00

Fast Fax by Michtron. This is the original fax hardware/software
for the Atari computers. Works with ST 520 to Falcon. This is a
special Michtron 9600 Send/Receive Fax Modem with software. The
software is very efficient, powerfull, and simple. Send, receive,
view, log, and print, faxes. has drivers for popular printers and the
SLM804/SLM605. Use a spare 520 or 1040 as a stand alone fax machine.
Comes with special fax modem, diskettes, and manual. $35.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $9.00

Gold Rush by Sierra. Complete with box, docs, and disks $9.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

ST Control by Trio Engineering. A BASIC like language that
is closer to using normal language to program. Example
"Draw picture with Neochrome" Includes box and diskette
no manual. $5.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $1.00

Atari Computing Magazines $6.00 each with cover disk

Issues # 4 5 6 7

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

5614. Will disks converted w. st2dos still work on ST?

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: CurtBrown@my-dejanews.com
Message-ID: <6t43h9cmf1@nnrp1.dejanews.com>
Source record: 94281

I have an early 520ST w. a single sided drive with files on disks that I'd like to copy over to my PC. I've ftp'd st2dos, but I still wanted to be sure about something before I go forward--the documentation with it says:

"ST-bootable disks are not bootable any more after conversion."

These disks contain just files, not apps, but I beleive I may have formatted them with the "bootable" option, or whatever it was called.

I don't need to be able to boot TOS with these disks (I boot with a disk holding an app) but after I convert them with st2dos, will I still be able to read them with my old ST? (it had the external single-sided floppy drive) Thanks.

I don't have a clue why a program that ran on a 4 Mb Falcon would not on a 14 Mb Falcon. Assuming that this is the case, however, perhaps the memory restricting features of Geneva might help. Personally, software that doesn't run on the Falcon doesn't stay around anymore.

My guess is the KB controller chip was not making `good contact in its socket, not uncommon on a machine that's a few years old. First thing to try with any problem like that is to get yourself an earthing wristband and take all removable chips out of sockets and put them back in the same way, even just loosen them in the sockets and push home again will do......sockwets get a bad contact occasioanlly so it will work......alternatively find yourself a steel persuader and engage in percussive maintenance.....

Your dealer sent you an old version. The latest is 2 revision 7
(although this is almost the same as revision 6). I suggest you try
to get hold of a copy of a later version. Your dealer should be able
to get one from Steinberg, it is still readily available in the UK.

E-mail me direct if you want help to find one.

5621. FS: Toadfile 44MB Syquest Drive,Under Monitor Case, 2 cartridges, $125

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-0809981435090001@i387.oro.net>
Source record: 94288

Includes the Syquest 44MB drive housed in the nice dual bay under the monitor case from Toad computer with lighted on/off switch on front. One bay has the 44MB drive and the other bay is open. Drive is SCSI so will work in a modern Atari that supports SCSI or an older one if you have the LINK adapter. Includes 2 44MB carts. All looks and works great!!

Tom

5622. Falcon now flying in (S)VGA modes...

Newsgroup: comp.sys.atari.st
Date: 1998-09-08 00:00:00 UTC
From: outrider@lvdi.net
Message-ID: <35f533c4ca9648@lvdi.net>
Source record: 94289

I've been using a Falcon for a number of years now, almost always using an SC1224 RGB monitor, though occasionally with an SM124 mono monitor, in emergencies. I've always wanted to get a nice SVGA monitor, but never got around to it.

Well, my SC1224 monitor died last week, so I figured now is as good of a time as any. Today I bought a Sony Multiscan ES100 15" monitor with a .25 dot pitch and a maximum 1280x1024 resolution. I already had the VGA adapter, so it was completely plug-n-play.

So far I'm very happy with it. Even though it's /only/ 15", it's much bigger than what I'm used to. It's also much sharper, without the annoying flicker that's associatated with RGB monitors in the larger screen sizes. It has digital controls on the front for sizing, centering, rotating, adjusting the pin cusion, color, brightness and contrast, as well as a reset button for one or all of those settings. The controls couldn't be much easier to use.

I've only gotten 640x480 so far, but I'm sure I can do better with one of the screen sizing programs (I even have ScreenBlaster around here somewhere). Everything looks so big in 640x480, I know I could go bigger without losing readability.

I am having a bit of a problem, though. Ease always boots up in 640x400x2. I can change the res and it then accepts the new res, but the next time I boot, it's back in 640x400, even though I save the new res from the dialog. Anyone know what's going on here?

Any other suggestions for a new (S)VGA user would also be appreciated.

> This time I'm after an emulator to make my PC think its a falcon - again
> preferably a software download. Does one exist? If so where can I get it?
I

AFAIK, it would need a VERY VERY VERY fast processor to emulate a falcon,
so unless you got a lot of money to waste on buying that sort of hardware
should one be released, you might as well a real Falcon.
Besides, you'd need the Falcon TOS, so where would you legally get that
from?

> really want to be able to use the extended video modes provided as well
as
> the extra power of the Falcon. If not, maybe there is an emulator of the
> Mega STE or one of the newer 680x0 Atari compatible machines?

You might as well look for the real thing. Pacifist & Tosbox emulate
STe's, they have the blitter function, and under gembench there is a
reasonable speed. But graphically, they still look a bit crappy.

Ya cannai beat a REAL Atari.

AM.

I think therefore I AM.

Try for a second hand one or a free keys kit from System solutions
works witha normal ST keyboard.
>
>I don't see the mouse/joystick ports on the system unit, From the one
>pic I've found it looks like the ports are on the keyboard?

Thats right, the small socket on the side of the base unit has the
same wires that an ST has on its internal connector.

>
>I've seen PC keyboard adapters for the Mega, but not much details. Any
>preferences? anybody know if these adapters are just the keyboard, or
>(if the mouse/joystick ports on the keyboard) do any support the mouse

Fair enough - I definitely haven't got that kind of money!

>You might as well look for the real thing. Pacifist & Tosbox emulate
>STe's, they have the blitter function, and under gembench there is a
>reasonable speed. But graphically, they still look a bit crappy.

I have to agree that the emulators aren't as good as the real thing - I have a 2Mb STE sat right here! As for looking for the real thing - how much would a Falcon cost me now? I remember they used to be well overpriced, which is the only reason I never got one in the first place. Okay - PCs are overpriced, but to get a Falcon with the same level of hardware as a PC would cost as much if not more than my PC cost me so there really is no difference before I get knocked down for that one!

>Ya cannai beat a REAL Atari.

Of course you can't - All hail Atari and dream of a world where they used marketing to make themselves successful rather than the computer that should be.

Cheers,
Rob.

I remember there was a discussion about RealAudio on the Atari, but
what about this new WebCoiceTV?

Anyone porting this to the TOS platform?
Or will it only be for the PC people?

From what I understand it didn`t need a powerful Intel processor.
Just some code to run your browser, like AV-server or something like it

Have a look at

http://www.webcoicetv.com

It looks promising?
And we (the TOS community) have a chance to be in front again,- almost.

cheers

I have an AT-Keys interface which connects to the keyboard connector, it has
a DIN socket for the PC keyboard and two sockets for mouse and joystick.

It works very well but does need some soldering and you'll need to source a
keyboard processor chip (Best Electronics would probably be your best bet -
bestelec@concentric.com)

I need a help with the ancient game from Silmarils Ishar 1.
There are some potions and I need recipes for mixing them. I mean
potions from the list found during the game (ARBOOL, SCHLOUMZ, GHOSLAM,
CLOPATOS, DROULI, ...) They should be in manual... But I can't find my
manual... :-\

Can anyone help me?

I guess you need the MintNet package with all the tcp/ip stuff.

Why don't you go for CAB ?

hi terry,

i had the same problem before. i have screenblaster 2 installed, and everytime i booted the system, the screen res selector appeared with default setting "2-color mode" (but higher res.). at least i solved the problem when updating to magic 6. i figured out that thereï¿½s a line in the magic inf-file to set the startup screen mode.

i donï¿½t know the line you have to add (BTW: are you using magic? i suppose yes because you mentioned EASE), but i could take a look if it would help you...

so long, -micha-

It hasn't been done yet, and I doubt it will for a while. The Falcon has
quite a lot of extra hardware that would need to be specifically
emulated, such as the sound system matrix, the DSP, the DMA... You would
need a pretty faster processor to do this.

Tosbox allows you to access extended video modes with TOS 2.06, but is a
bit slower and won't run many games.

Cheers,
Nick

Yo Terry,

OK, I just connected to your excellent Web page using My Falcon with CAB and my G3 laptop using Netscape v4.5. Using CAB, I couldn't get the show stats page to load. Using the G3 it did work OK. I used two different ISP's.

ShowStats did show I had connected with CAB, but said my operating system as unknown. It got the Mac stuff OK. I was number 464 and 465 sign on.

Your getting hits from all over the globe today <g>. Not many using CAB though ;(

As others have said, Geocities is s-l-o-w. But it's free <g>. It's to bad it, showstats, doesn't recognize Atari OS's. But, what can you do?

If I understand, you have Cubase 3.1 and Cubase Score 2.0. Are you sure
you are using the correct dongle for each version.

Other than that, I don't really know. I don't think the disk format
should be a problem, because if there were read errors, you wouldn't be
able to load the prgram at all. Try copying it all over to a DD disk
anyway. You can also try to dowload the latest MROS 3.45 and Cubase 3.1
files. Cubase Score is no longer available for download.

Cheers,
Nick

Message-ID: <35F627D0.B625A68C@eunet.yu>
Source record: 94162

> F > Can anyone tell me what the exact format of an *.IMG file is,

The IMG format is quite complicated but let's give a try:
The file *.IMG have a header llike this

```
typedef struct
{
UWORD im_version; /* version number */
UWORD im_headlength; /* length of header in words */
UWORD im_nplanes; /* number of color planes (RGB = 3) */
UWORD im_patlen; /* length of patterns in byte */
UWORD im_pixwidth; /* pixel width in mm/1000 */
UWORD im_pixheight; /* pixel height in mm/1000 */
UWORD im_scanwidth; /* width of line in pixels (width of pic in pix)
*/
UWORD im_nlines; /* number of scanlines (height of pic in pix) */
}
```

The header length must be correct, because some GEM versions can modify
the headers of IMG files, but the older GEM's cannot, so they just skip
the extra info.

Every Scanline consists from two parts. The first is the marker

```
typedef struct
{
WORD sc_zero; /* it's 0x00 all right */
BYTE sc_ff; /* again, it's 0xFF */
BYTE sc_cnt; /* count of the coded scanline */
}
```

The scanline contents follows, but it can be coded in three different
ways:

SOLID RUN: b/w pictures are coded in this mode, in single byte. The
highest bit says whether the pixel is on or off, and the rest of them
says the count of pixels, which have to set (or reset). So, $06 means
six black (off) pixels.

PATTERN RUN: first byte 0x0, second the number of pattern repetition and
the length of the pattern is stored in the header (im_patlen).

```
typedef struct
{
BYTE pr_zero; /* 0x0 */
BYTE pr_cnt; /* repetition count */
BYTE pr_data[...]; /* pattern data */
```

}

BITSTRING: Begins with 0x80, and with count of bytes, than follows the uncompressed pic data.

```
typedef struct
{
BYTE bs_first; /* 0x80 */
BYTE bs_cnt; /* count of data in bytes */
BYTE bs_data[...]; /* pic data */
}
```

Than follows all the same for the every color plane.

The IMG file format is not suited well for color pictures. The GEM-Documentation speaks about separate storing for RGB and grayscale pictures, but it is really undefined and not supported.

There is some extension to IMG, called XIMG defined by Dieter and Jï¿½rgen Geiss. The header structure was extended, like this:

offset $10 LONG constant "XIMG" as here
offset $14 WORD Color model (0:RGB, 1:CMY, 2:Pantone)
offset $16ff WORD three 16-bit values for the RGB model, in standard VDI format

Naturally, the header length must be corrected right.

Bye, tom.

>
> These disks contain just files, not apps, but I beleive I may have formatted
> them with the "bootable" option, or whatever it was called.

Never mind. I just used: (select A drive) File | Format. If I recall, old ST's like mine would boot up faster if a disk was in the drive because there was some extra info on the boot sector which would load into ram faster.

I guess even if a disk isn't bootable after st2dos, I can still boot the machine without a disk inserted.

>
> I don't need to be able to boot TOS with these disks (I boot with a disk
> holding an app) but after I convert them with st2dos, will I still be able to
> read them with my old ST? (it had the external single-sided floppy drive)
> Thanks.
>

Well, here's what happened: I formatted a disk, copied some files over from the older disks, and inserted it into my PC and ran st2dos. I could now copy the files over onto my PC. I then copied a text file from the PC and yes, I could read it with an editor on the ST.

So what's going on here? st2dos just "updates" the boot sector on the disks that were formatted on the ST? They should now be readable to dos as well as early tos?

If I format a disk at 720k on dos, then use st2dos, should it be readable from the st? (I'll try it tonite--but *should* it?)

The reason I'm asking, is that I'm now running into trouble trying to format disks on my st (single-sided) drive. In the past I've been able to format and use 1D, 2D, and even HD disks with the hole taped over. I was able to format a few last night, but I'm occasionally running into errors (on seemingly perfectly good disks which format no problem in dos). Sometimes it stops midway with the message "An error has occured during format or copy, target disk may be unusable" or it nearly completes with a message like "check the disk or drive connections". Everything is in order--is the drive starting to go bad?

Could this be a dirty head? I have a cleaning diskette, but it says "do not use on single sided drives" Why not? Is the arm on a single sided drive in a different position? Thanks.

Hmm... I didn't notice the word "external" there... However, this
clock is fed to the CODEC (iirc...) and not the DSP.

>suppose yes because you mentioned EASE), but i could take a look if it
>would help you...

Yeah, I'm using MagiC. I was going to paste that line to show you
what it is, and it led to me discovering the problem. Here's the
line:

#_DEV 5 26

What happened was when I changed monitors, my screen was all messed
up in Ease, because it was trying to change to ST-High. So I booted
up in TOS and commented out my #_DEV line. Well, when saving a new
res, Ease (or whatever's responsible) saved the new line at the top
of my MAGX.INF file, rather than where it's supposed to go. I simply
moved it to where the old line was, and now it's working fine, and is
being updated in the new spot.

Now if I could just figure out why STinG is not loading properly from
the AUTO folder anymore.....

Thanks.

Upon further review, you're right, Pascal; it works the same as
before. I guess that error screen was in my cache and that's why it
kept coming up. After re-testing 1.3003 and having it update my
cache, I tried 1.3011 again and it worked like before. That is, it
showed the old page, but pressing ^L gave me an updated page.

Just to clarify a few points: Old TOS format is almost identical to IBC-PC format except the bootsector. An ST can read any PC disc, and alwasy has been (as long as the drive can cope, ie. single sided, HD etc). The only problem comes when a PC tries to read an old TOS disc.

This means that any special bootsectors (some games) cannot be read. If they are converted using st2dos, they will no longer be able to boot. However, depending on the game, the boot sector can be restored using the Ultimate Virus Killer which has a large database of boot sectors.

Newer versions of TOS - from 2 (and Magic) format discs with a PC bootsector to aid in transfering data.

A 720k disc is a double sided, double density, so it cannot be read by a single sided ST disc.

I've just checked the DOS help on format and it cannot format a single sided 3.5" disc, so you will have to format it in TOS.

Alternatively, buy a double sided drive - it is easy to change and only costs a few quid.

One point about using high density discs: this certianly used to be the case a few years ago, but HD discs have a more dense material and require a stronger magnetic field to succesfully write to them (which HD drives can produce). This means that using a DD drive with a weaker field strength runs the risk of data loss on the higher density material. As I say, this was the case a few (6 or 7) years ago, and modern HD discs can maybe cope with a lower field - just beware!!!

As for the trouble in formatting a disc, maybe the head is out of alignment. There is probably some sort of performance utility you can get - don't know personnaly.

Can't think why you can't use a cleaner on a single sided disc though.

Hope this all helps,

Gav.

What I meant to say was that while the "converted" ST disk was in the PC, I
was able to copy a text file to it, remove the disk and place it in the ST,
and then open that file with a text editor. Both a PC and an old (pre 1.04)
ST *should* be able to read/write from a disk that has been "converted" with
st2dos , right?

Did some more reading. HD disks (with the holes taped) in an ST are Not
Good. Apparently, when the tracks of these disks are formatted at 1.44, a
higher magnetic current is used which is hard to overcome with the ST drive
head. I'll stick with 2DD's. (funny thing--some HD's formatted in the ST)

I also read that there is a faq for st-pc/pc-st conversions, but couldn't
find a url for it. Anyone have it?

I'm also looking for this kind of expansion because when you are using
a very memory demanding set-up, when you try to print with a SLM laser
printer, you are always ST ram asker because I think the laser is not
able to use TT ram as buffer for printing operation ... Am I right ?

I actually have 64 Mb TT ram and 4 Mb ST ram, so if it was
possible to "allocate" the working memory place of the laser there
should be no problem at all ...
But I really would like to receive some comments about this if you are
in the same situation ...

Hi Jo,

somewhere I have in my mind you could expand ST RAM to a maximum of 10 Mb...
and indeed, the only need for more ST RAM are the bloody lasers...

Jo, what card have you in your TT with 64 megs? That the latest Aixit board?
I still want to upgrade mine to 64 megs, but MABN finally told me they had
to wait for production when the "boards for the Milan" would be done first...
Later Thomas R. told me Aixit had nothing to do with manufacturing Milan
boards. So either Aixit screwed MABN or MABN screwed me.... at least I got
my money back. But I'm still in the market for an upgrade, since my 4+16
Megs are far too less for decent MT.

5662. STinG AUTO Problems?

Newsgroup: comp.sys.atari.st
Date: 1998-09-09 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6t6foi$42@enews2.newsguy.com>
Source record: 94183

On 9 Sep 1998 07:24:14 , Terry May wrote:

>Now if I could just figure out why STinG is not loading properly from
>the AUTO folder anymore.....

What exactly is the problem?

I've had STinG not load properly unless it was the very last AUTO .PRG (even if there was another _DISABLED_ .PRG after it, it would load, but not complete the login process). And of course, it has to come after HSMODEM stuff, but I'm sure you know all this...

I've also, for no apparent reason, had STinG (while AUTO-loading) not install, with a short message that one of the .STX "modules" wouldn't load, so STinG wouldn't install. After this, I just recopied the .STX module from a backup folder (which I learned to keep around after this happend a few times!), and all was well. These .STX files seem to spontaneously corrupt themselves from time to time! :^\

5664. CAB URL Pasting

Newsgroup: comp.sys.atari.st
Date: 1998-09-09 00:00:00 UTC
From: ecncomr@socal.com
Message-ID: <6t6fon$42@enews2.newsguy.com>
Source record: 94185

Is there a way to make words "wrap" when pasting a URL into the CAB hotlist (from the clipboard)?

Basically, as I read through newsgroup articles with NEWSie, and find URLs that I'd like to check later, I use the clipboard to copy the URL, then switch over to CAB (under MagiC, of course) to put that URL into my hotlist (I have a Theme called "Sites To Check" for this very thing). Then I use "New Entry" in the CAB hotlist, and paste this URL into the "file/URL" box. Then I switch back to NEWSie to finish reading articles. (you get the idea) ;^)

Anyway, a lot of URLs that I clip from newsgroup messages are longer than one line in the CAB hotlist URL box, and when you paste into that box, anything longer than one line gets cut off. So, you have to manually move the cursor to the next line to get the rest of the address in there (typing it it manually as well).

As an example, if I found the following (imaginary!) URLs in comp.sys.atari.st:

http://www.microsoftwindows98/for_atari/index.htm

..and I used the clipboard to paste it into the "file/URL" box in the CAB hotlist (as a New Entry), it _would_ fit on one line no problem. However, if the URL were:

http://www.microsoftwindows98/for_atari/~beatsPC_version/index.htm

It would be too long to paste into the CAB hotlist "file/URL" box on one line, and the end of the address would be cut off, and have to be entered manually on the next line.

Yes, if I paste it into the CAB "open URL" box (NOT the hotlist) I have a little more space to work with, but I've still run into URLs that are too long for that too, and the same problem occurs. Plus, this doesn't work well for what I'm doing when there are several URLs I want to save in CAB and check out later.

Any work-arounds or thoughts on this?

Apparently (by what else I've read on dejanews) it may have more to do with
the rpm's varying. I found a utilty at the umich site (under diskutils)
called speedst.lzh (speedst.prg) which checks disk speed and another called
tracker.lzh (tracker.prg) which checks disk tracks. Are these the right
tools for this situation? Or what?

> Can't think why you can't use a cleaner on a single sided disc though.
>

I'm just worried that the head touches the disk in a different way such that
it will hit the plastic part of the cleaning disk. Anyone out there use one?
Thanks.

Yes, the TT has already 2 Mb ST ram fitted on its motherboard, so if you add the 8 Mb ST ram card, the sum is 10 Mb.

>Jo, what card have you in your TT with 64 megs? That the latest Aixit board?

This is not the latest one which should be able to accept up to 256 Mb ... mine is "only" able to accept up to 64 Mb, that's what I have done a few months ago and that's really great ! Except for the laser ... and I have just understood that fact right now by reading Martin Eric Racine mail ... then "Eureka" ... I cannot print from my 32k colors resolutions under Geneva/Neodesk because when using Calamus SL there is not enough memory available ... did you know that you cannot Load AND Allocate SL in TTram ... you can only Load it in TTram and I suppose this is my problem ... because when not using Geneva/Neodesk set up which also uses a background picture it works ... I can print from SL or Papyrus or so ... otherwise impossible ... not enough memory !!!!!! A pity when you have about 68 Mb installed :)

Yes, there will soon be a nice solution to this problem, and many
others, by means of the project that I'm currently working on (partially)

It's a program called "StringServer" that can do some nice things ;-)

I'll soon have an official beta version of this package out. This
containts StringServer, a program to configure it and a textviewer that
supports it. AtarIrc and a program called Farmer now supports it too.
Farmer is a TOSwin like program.

This package needs a Multitasking OS and will be released as Shareware.

5676. Sequencer

Newsgroup: comp.sys.atari.st
Date: 1998-09-09 00:00:00 UTC
From: Dwight Sirls <sirls@tyler.net>
Message-ID: <35F6EB2F.69CA@tyler.net>
Source record: 94197

I've only been into the Atari for a few months now, and I purchased an Atari 1040STF with the Hybrid Arts Sequencing program, Edit Track. I thought the timing was real tight, better than my stand-a-lone sequencer. I haven't heard the Cubase 3.0 program yet, but I queried about sequencers in the past and this seems to be the favorite. Is Cubase 3.0 as "tight" as the Hybrid Arts?

Dwight

Hi Paul,

or is it one of those "undocumented features" of Newsie??????????
Remember my first installation of Newsie when it corrupted Route.tab and
Cache.dns...
Though I never experienced other problems after solving the original one.

Buy Videlity, you won't be disappointed. Also, if you can't sort out the problems with Ease try Thing 1.27, it's a full AV server and IMHO much better. BTW 640*480 will soon appear cramped!

You shouldn't have any timing problems at all with Cubase 3.0. Many many people have testified to its rock solid timing. I don't know the sequencer you are using but as Cubase is widely considered as the industry standard then and now (it continues to thrive on MAC & Windows) I think you'll find it superior in every way. Note however, Cubase needs 1Mb and a mono monitor.

Not sure, but it seems to be fixed. I changed nothing from my
RGB/mono setup, but when I switched to VGA, STinG stopped loading.
It appeared to load from the AUTO folder, but none of the CPXes would
show up in COPS and the dialer would say it wasn't installed or it
was corrupted. I could run it manually from the AUTO folder and all
would be fine.

I don't know what I did, but it's now working again.

Thanks for your response.

From: tross3@hamtel.tds.net
Message-ID: <6t7ju0$d9h@news2.tds.net>
Source record: 94101

Well... I just discovered something interesting. In addition to fixing CAB.OVL to work with the Geocities counters, it is now working with almost everything that I've never been able to use. Guestbooks can be signed - all of the links in the GeoGuide now work (some, unfortunately (like Chat) require a client that can handle JavaScript).

Great work Dan! Now, I have access to all of these features, but since I'm using CAB, I don't have to deal with the stupid pop-ups and watermarks :)

BTW, this was with CAB 2.7 - don't know which other versions it works with.

I was under the impression that VIDELITY was only really useful if you have, for example, the NEMESIS board installed. I've tried the demo version of VIDELITY, and you really can't change the screen size much at all with a standard Falcon (and good qulity SVGA monitor). A couple of years ago, I did buy the software version of BlowUp for my Falcon, and it allowed _limited_ screen size adjustments - but required extra hardware to do anything really useful.

I am going to buy VIDELITY though (along with a NEMESIS board), as soon as Alex at ATY Computer gets some more from Titan.

Well, I remember Hybrid Arts saying that their sequencers had the best timing of any, because they tended to make that their primary focus when creating their software. I've never really used their stuff (other than occasionally trying a demo), but I have been using Cubase since about 1991. First, Cubase 2.1 on my STE, then presently Cubase Audio on my Falcon. I've never had any trouble with timing - even while saving or otherwise accessing the drives while playing / recording. Cubase is very tight.

My roomate recently got Cubase VST on his new PC, and he and I have both noticed timing errors - some for no apparent reason either. It sure is colorful & feature-packed though - ahhh... priorities! <hahaha>

Hmmm...

Could be. It has happened several times. Sometimes It'll work flawlessly one night, then the next morning, first bootup of the day, STinG will fail to install - with one or more of the modules being corrupted.

How was it determined that NEWSie might have caused the problem?

Hi Terry,

Le 10 Sep 98 ï¿½ 08:14:10, Terry ï¿½crivait :

>> The main goal of the ScreenBlaster (SB) is to add clocks to the Videl,
>> to allow higher resolutions (with good refresh rates) than with the
>> standard ones in the Falcon (25 and 32 MHz in a stock Falcon). The
>> main problem remains the slow bus in the (stock) Falcon which limits
>> the whole.
TM>
TM> That makes sense. When I was testing VI and the Videlity demo

VI is freeware (without limitation) and Videlity is commercial.

TM> yesterday, I saw how much I was limited. In fact, I didn't have
TM> much success with either one, particularly VI. Alas, I'm still stuck
TM> at 640x480.

Try again ;-)

Without my CT1, and with the Videl at 33 Mhz I've 800x608x16

This is the frequence for my monitor:

Horizontal 30-38 Khz
Vertical 47-104 Hz

>> With an overclocked Falcon, the higher speed on the bus (and Videl)
>> allows higher resolutions without a SB or a BU. This can be achieved
>> with a Nemesis (NM) or CenTurbo1 (CT1) or many others.
TM>
TM> Man, I need to get a Nemesis installed...
TM>
>> With the SB at 50 MHz clock, I run my Falcon in 960x720x16c.

I've the same speed (50 Mhz) with my CT1.

Bye, Terry
Christian

I never have notice this on my Hades.
The only thing I must do is setting the "machines cookie" to "ST". If I
don't do this my system crashes.

>
>I have taken everything out of the auto folder that I can, changed
>the caches, removed all accessories and re-unpacked the program on
>the DirecT60 and my TT.

Have you tried with unabled "Load Alt" and "Malloc Alt" program flags?
Some guys says that this can cause problems on the Hades because the Hades
knowns only one kind of RAM. I don't know if they speak the truth but
anyway changing these flags doesn't harm so give it a try.
I use all my programs, including mintdrivers and so, with these flags
unabled.

Removing NVDI seems to help in that the
>particular problems above are solved but the scan is left with thin,
>alternative black and white horizontal stripes across it. Very odd.
>
>It sounds more like the program rather than the SCSI bus but why did
>it work for one evening and not thereafter? I have contacted the

ISTR something called MultiGEM being reviewed in a magazine some years ago,
which could be the thing you're thinking of. IIRC it did a bit of a Geneva
in that it provided a multitasking AES but sat on top of TOS so pre-emptive
was out of the question.

>
>--
>
Paul, first time it happened was after starting with Newsie. Of course I
only suspected Newsie, so I started Sting and the Dialer first, then checked
the files and they were left intact. Next started CAB, no problemo. Then
started all the clients I had (Telnet, IRC, Newsie) one by one and after 10
minutes I knew it was Newsie doing it. Like I've told you before, the other
suspect was Sting itself, but when it ran together with the Dialer and
other clients, nothing weird happened.
Peter R. explained to me it simply was Newsie. I've monitored several files
of other clients regularly after that, but once the problem was solved (by
simply leaving out Cache.dns whereafter Sting generated a new one with more
convenient addresses) Newsie didn't mess with those 2 files any longer. And
ever since I've had no troubles with Newsie at all. But Peter did issue a
warning that there might be a chance Newsie somewhere could do something to
files it actually doesn't have control to, which might cause problems later
on. Appearently (for the moment to me, that is) Newsie's screwing around
with your STX files... You *may* try out by setting them to Read Only, but I
did just that with those Route.tab and Cache.dns and it didn't make any
difference.
The first version of Newsie I used was 0.80, and it happened with 0.82 and
0.84 too.

Any 9V adapter that has the proper parity and adpater plug will work. I use
a Radio Shack universal adaptor that came with switchable parity, the choice
of 5 voltages, and four plugs, one of which fit the Lynx perfectly. A bit of
overkill, but it works. By the way, I've also run the Lynx (accidentally) on
the 6V setting. It worked, but I'm not sure its a good idea.

5708. DTP + Graphics CR ROM

Newsgroup: comp.sys.atari.st
Date: 1998-09-10 00:00:00 UTC
From: jlog@zetnet.co.uk
Message-ID: <6t9huu$448$2@irk.zetnet.co.uk>
Source record: 94114

I purchased this CD ROM recently. It contains a lot of stuff but it recommends that folders are copied to hard disk before running the programs. Problem is, all the files are write protected so that once you have copied a folder to your hard disk, you will have to reset the read/write status on every file if you want to delete the folder. The Calamus 96 demo, for instance, has 147 files in 13 folders. That's a fairly boring task for one demo alone.

Better surely to have set them all to read-and-write (perhaps not as safe but overall better).

From: jlog@zetnet.co.uk
Message-ID: <6t9jfg$478$1@irk.zetnet.co.uk>
Source record: 94115

First of all, thanks to everyone who replied. If I might summarise:

Two people advised removing the Look_2.PAR file and starting again. This sorted out the pre-scan window size problem.

One person advised checking the SCSI termination. Turning termination off allows prescan to work without crashing and turning it on allows scan to work without crashing. Awkward but usable but probably indicates a problem with the interface.

The problem with the horizontal stripes remains. The number and thickness goes up and down respectively as the scan resolution goes up. Changing "Load Alt" and "Malloc Alt" flags made no difference and neither did changing machine cookie to ST High. I note on the Hades that the program counts down past zero (wraps to 65,536 and decrements) when scanning - on the TT it stops at zero.

One person advised trying a different version. I'll see if the supplier can oblige.

If all the PC scanners use a program (or standard command set) called "Twain" (I think), why are there different Atari programs for different scanners?

Seems to me I recall that ExtenDOS had this as an option, that
you could configure it to NOT set the write-protect bit on each
file when it was copied to the harddrive... Of course, that would
mean that NO file copied from a CD would ever be auto-write protected
but then that pretty safe considering the CD will still always
contain the original.

From: Prince Corum <corum@sasquatch.com>
Message-ID: <6tabh2$2np$1@news.sasquatch.com>
Source record: 94122

Is there any marked difference (on the label) between a 520ST and a 520STM (the M has a built-in RF modulator)?

This has sparked my curiosity recently as I was examining my ST with my friend Patrice. He has paperwork that shows the 520ST with only the RGB port, and the 520STM with RGB and RF. My machine is marked 520ST but has the RF modulator built-in. Does anyone out there know if the 520ST and 520STM had the same label from the factory?

Thanks!
Louis

Hi Terry,

Yes, I've had to do that on a number of occassions also - it seems like it's totally locked up. However, a few days ago, I started working on another project while leaving CAB running in the background - it kind of surprised me when it came back to life after about five minutes. Karen says that she does that whenever it happens, and that it always seems to come back.

This sounds correct, although I can't verify it without looking at the
schematics.

> What I don't quite understand is the conversion that
> is going on. How do you get a 50kHz sample with a
> 25.175MHz clock (the math part, not the hardware

25.175MHz divided by 512 is 49169,92KHz, which IIRC is the sample-rate
the Falcon use at "50KHz". AFAIK are the other rates 1/2 and 1/4 of
this, this is easy to do.

> part)? The divisor isn't constant looking at the
> available sample rates. Will an external 22MHz clock
> produce a 44.1kHz sample?

A external clock at 22,5792MHz will give a sample-rate at 44.1KHz
(44.1KHz * 512).

Ken, I just recently got a nice US Robotics Modem from MicroWarehouse
over their web page using SS (secure sockets), which I beleive is the
currently accepted method for these types of transactions, with CAB 2.7
Demo and CAB.OVL 1.3011b with STiK. Order went thru without a hitch.
Interesting enough when I tried the first time from work using NetScape
3.0 I kept getting an "Address Field" incorrect error from MW's server.
Tried at home on the trusty ol' TT and did not have a problem :)

Out of the ether, the following was mentioned by
derryck@TAKETHISOUTcix.co.uk...:

d> I have a vague recollection of a video card that hung off the back
d> of an ST
d> on some ribbon cable seen in a magazine but it never saw the light
d> of day
Was this the Parsec video adapter? Boasted a display of something like
800x600 in 32768 colours, all for the lovely price of around 650 quid?

If so it was released but never sold many units because of
compatibility and price. The company behind it closed down and one of the
employees went on to found another company whose first product was another
graphics card but lower spec'd for less money which you
had Derryck! ;-)

Out of the ether, the following was mentioned by
macdonald@cfcsc.dnd.ca...:

m> os
m> --
m> OS9
m> Linux
m> TOS
m> Magic
m> MultiTOS
m> MiNT(MiNT and nAES/Geneva/xAES/oAES)
m> omen
Add to this SMS2 and Mirage, plus there was another multitasking
extension to TOS which was a bit simpler (and more graphical) than Mint was
when it came out. Don't think it took off because it wasn't that compatible
(can't recall the name though, other than it was
something with maybe multi in it).

Also mustn't forget NetBSD.

m> emulating:
m> MACintosh68000
m> PC-DOS and Windows
m> Atari 8bit
m> Amiga (haha)
and to this QL, Spectrum, TRS80, BBC B, Commodore 64, Apple II
(actually I have heard that these last 3 emulators aren't so
complete/successful).

90% of the time I use my 233 AMD computer, but when I do MIDI I still use my good old Atari ST. After using my power system I find that the Atari mouse is SO SLOW. I have Maccel in my auto folder but that doesn't make it. It's still way too slow. Does anyone know of a mouse accelerator that comes close to the speed of a Windows desktop? And where I can download it from?

Thanks

Glider

Dwight:

I feel any sequencing application that you would use on the Atari would be just
as "Tight" as as another becuase of the built-in-midi ports.The difference
would be in the application itself as far as features. For example, I use
Edit-track AND Cubase, because each has it's strengths and weakness's.
There are some atari musicians that swear bt the Edit-track "school"
simply because it works the way they want to do sequencing. Some swear by
the "Cubase School". My feeling is.."why not use Both?!"Midi files can be the bridge
between the two.

(Damn ISP newsfeed. This is actually in reply to your post that I
read today on another server, but hasn't made it to my home
account yet:).

Hi,

Correct me if i'm wrong;

An internal 25.175MHz clock is output from pin 59
of the SDMA to pin 3 (CLKIN) of the CODEC to record
a 50kHz sample.

When pin 26 (AUXCLK) of the DSP connector is feed to pin 56
of the SDMA (EXT_CLK), and external input is selected
in software, that clock is then output on pin 59 of
the SDMA and becomes CLKIN for the CODEC allowing a
different sample rate.

What I don't quite understand is the conversion that
is going on. How do you get a 50kHz sample with a
25.175MHz clock (the math part, not the hardware
part)? The divisor isn't constant looking at the
available sample rates. Will an external 22MHz clock

produce a 44.1kHz sample?

Thanks,

Mike

5729. Hades and Look2

Newsgroup: comp.sys.atari.st
Date: 1998-09-10 00:00:00 UTC
From: jlog@zetnet.co.uk
Message-ID: <6t7p2o$1g5$1@irk.zetnet.co.uk>
Source record: 94218

Hi

Is anyone out there successfully running Look2 on a Hades?

I have a DirecT60 (which uses a Hades board) and I purchased Look2 and an Epson scanner to use with it. The scanner is connected to the SCSI port on the board via a Maplins SCSI2 backplate and ribbon cable. There is also a Yamaha CDR on the bus. Everything worked fine for one evening but not thereafter. The scanner works with the TT so I guess it is OK.

The main problem is that the prescan window comes up the wrong shape - right width but reduced height. Dragging the size button alters the width only. Click the prescan button and the scanner does scan but the program then seems to hang. Click the scan button and the program crashes

I have taken everything out of the auto folder that I can, changed the caches, removed all accessories and re-unpacked the program on the DirecT60 and my TT. Removing NVDI seems to help in that the particular problems above are solved but the scan is left with thin, alternative black and white horizontal stripes across it. Very odd.

It sounds more like the program rather than the SCSI bus but why did it work for one evening and not thereafter? I have contacted the supplier, Medusa and Digital Arts. No help or no reply so far. Any opinion would be welcome.

I never realised that format could be done on a PC, there is a formatter
on the ST to do the same thing (ST Format cover discs were formatted
using it, to allow single sided users access to at least some software)

> Apparently (by what else I've read on dejanews) it may have more to do with

The head scans in the same manner as a double sided disc. Although,
maybe the head presses harder onto the disc surface, hence, using the
abrasive material would damage the head.

I'm afraid I've never heard the Hybrid Arts sequencer, but around here
Cubase and Notator are really still considered as pro stuff. Cubase has
a lot of very cool features, it's just difficult to find on the second
hand market.

Cheers,
Nick

Heck Terry, that's what happened here last monday nite... I tried to hook up
with the IRC Milan chat and AtariIRC kept on bombing out. I knew I'd done it
before working in TT-med on my spare VGA monitor. So I switched to that one
again and booted in TT-med. Didn't see the boot msgs, but when I activated
Dialer from within Thing's desktop, it said it wasn't installed too... I
just clicked on "enable" and "connect" and it just did and worked fine :-)
Haven't checked the CPXes then, but everything worked 100%. Maybe that's the
same with you then.
BTW, AtariIRC won't run any longer here (and I know for sure I used it the
first Milan IRC!) so I'm now using FracIRC 2.0 for those very rare occasions
I'm on IRC. Discovered the Demon.uk servers work best :-)

As you mentioned you can use any disk in your drive, you can be sure
that they are mechanically all the same.
The problem can only be the opposite side of the head, which is no nice
smooth metal head but a sort of rough pad like in tape recorders
designed to glide on a smooth surface. This could perhaps be damaged by
the material of the cleaning disk.

Hello,

in article <35f6ced061ab9c2@lvdi.net>
Terry May wrote:

> What exactly is ScreenBlaster for, then? I got it with my Falcon
> (one of them, anyway), but never had any use for it, since I've
> always used Atari monitors.

The main goal of the ScreenBlaster (SB) is to add clocks to the Videl, to allow higher resolutions (with good refresh rates) than with the standard ones in the Falcon (25 and 32 MHz in a stock Falcon). The main problem remains the slow bus in the (stock) Falcon which limits the whole. Also, the SB came out in the earlier days (rather months) of the Falcon when even VI was not here yet. Another (at least) card came out at about the same time: was it the Blow Up (BU) ?

With an overclocked Falcon, the higher speed on the bus (and Videl) allows higher resolutions without a SB or a BU. This can be achieved with a Nemesis (NM) or CenTurbo1 (CT1) or many others. But you still need a software to easily drive the new clocks and adjust the parameters to suit your monitor. Videlity is dedicaced to the NM, CentScreen to the the CT1, but you can use them on a stock Falcon as you can do with SB_VMG.PRG (the soft to set the SB up) or VidelInside (VI). VI can take advandage of the new clock provided by the NM or the CT1.

With the SB at 50 MHz clock, I run my Falcon in 960x720x16c.

Hummm .... he's 'half' right, I suppose. You can run ST-High Res. from a TT on an SVGA but you CANNOT run TT-High Res. So 'monochrome' - yes: TT High -no.

>He will come over to my place tomorrow with his TT to try this out.
>Is there any danger involved when connecting a modern pc monitor to
>a TT?

I don't think so. There is a special mono-detect line on the monitors which will support TT-High. Without this the TT will not allow you to select the mode.

You could try Silkmouse (v4.20 is the latest - from all good ftp
sites).

It uses a clever algorithm which makes use of mouse-movement
acceleration to give rapid mouse relocation over long distances.

It also contains a very effective screen saver and is relatively small
at 7.5Kb.

Just a thought (I haven't tried it) - but since you're multitasking, why not run a text editor, paste to it, put a CR in the appropriate place, re-cut the modified URL & then paste it into CAB?

You should check out XURL though - SDURL by Guy Harrison works well too.

Source record: 94233

Ken,

> Is it possible to use a TT with a svga monitor in monochrome mode?

Yes, you can get ST-High (640 x 400) output on a SVGA monitor. The TT030 is already set up to emulate this mode on a SVGA monitor.

> This would mean TT high i suppose. I have a strong feeling this does
> not work, but a friend says the opposite.

TT-High is only available on the TT030's High Resolution monitor. Its signal is sent out through different pinouts than are used by a SVGA monitor. The TT030 detects the connection when it is present and automatically sends out TT-High (1280 x 960).

> He will come over to my place tomorrow with his TT to try this out.
> Is there any danger involved when connecting a modern pc monitor to
> a TT?

No problem. A SVGA monitor connected to your TT030 is capable of displaying ST-Low, ST-Medium, ST-High, TT-Low, and TT-Medium resolutions. The monitor, however, will need to be readjusted to get the display properly proportioned and centered since the TT030's output is slightly different than a typical PC-Clone. Many monitors may require internal adjustments to accomplish this if the external adjustments do not offer enough adjustment.

For convenience, most of my TT030 customers, myself included, use both the TTM195 high res monitor and a color SVGA monitor with their TT030 systems, and use a monitor switch box to select the one they wish to use. I do have those switch boxes and connecting cables in stock in case you should ever need one.

Here in Holland our organisation has taken over the hardware from the
ex-firm ATIN.
In it are many memoryboards for the Falcon.

MF-30 Memoryboard 1/4/16Mb SIMMs Falcon 030

It contains for connectors for 4 SIMM modules (32-p) and with
4 x 4 Mb you will get 14 Mb (Atari logic).

Price? Dont'know yet.
Maybee $30 ???
Let me know you all there!!
Is there any interest in this product? I have about 40 of them.

Met vriendelijke groet,

Is Cab supposed to work with Yahoo as of yet? I sure can't get it working with Cab 2.7/OVL 3.011b/STiNG. And I have tried different time and GMT settings.

Hi David,

I used to have an STe with The Link and ICD. I never
had a problem with it. I had a zip drive and a
Syquest hard drive hooked up. The only bad thing I have heard
is that you can't use more than a 1GB hard drive
or ICD will not recognize the rest of the drive.

Yes! Hades060 and EpsonGT8000

>The main problem is that the prescan window comes up the wrong shape
>- right width but reduced height.

This indicates that you've switched "Options" ON in the preferences
dialogue. Try to switch it back to OFF and see if it helps.
Or delete the settings file "LOOK_2.PAR" and start from scratch if you
can't access preferences.

>It sounds more like the program rather than the SCSI bus but why did
>it work for one evening and not thereafter?

It could be that your program version does not work correct as well. I
have an english version that wont work at all (keeps telling me that the
scanner is not connected or switched off). I use an older german version
which works OK. My english version did not work on the TT either.

I hope this will help you a bit. Otherwise - shoot again!

greetings, janne

OK yes there is a "rap" player for falcon, but I thought what you meant by
Real Audio is "streaming" audio.
The Falcon can NOT do streaming audio or video.

From personal experience I would tell you that you
would get ALOT momre cash for this stuff if you wanted to sell
it on the net rather than in a garage sale. I would
say garage sale value would be around $30. Net value would be around
$100-$120.

Hi atari lovers! I am writing this because I am real
excited about Popgem2.0 by Kellis. I have registered
this wonderful program and I love it!
Soon send mail will be implemented into the program.
This program is a must have for Atari owners.

get it at: http://www.primnet.com/~kellis/

JoNk

Hi Kellis :)

Hi Terry,

I think you might want to see what your newdesk.inf
is set to, that might have something to do with it.

Also are you using German version on MagiC??

5754. Atari Times Special Edition 1

Newsgroup: comp.sys.atari.st
Date: 1998-09-10 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <6t7dtj$c1n@news2.tds.net>
Source record: 94243

Atari Times Special Edition 1 is out in the US. Forty-four pages (pamphlet-sized) covering HTML, STOS, Obtaining and using samples (audio) in STOS, E-Mail, IRC, Digital Photography and Processing and TOS & GEM.

I am the distributor of this not-for-profit magazine. The price is $2.00 US (The masters are actually in color - if you desire a color copy the price will be $3.50 US). I don't have any information up on it yet, but aside from the price, the information is the same as for the ST+ Fanzine (I anticipate the ST+ issue 32 masters will arrive tomorrow, incidently) and can be found at:

http://www.geocities.com/SiliconValley/Peaks/6320/stplus01.htm#order
